Early Completion of Mathematics/Composition Requirement

Our Institutional Research indicates that completion of 30 credits, completion of a college level math, and completion of a college level composition course in a student’s first academic year increases their odds of retention and graduation. In comparison with students who do not follow these recommendations, students who

• complete 30 or more credits, including math and composition, within their first academic year have 67% higher odds of retention and 76% higher odds of graduation;
• complete 30 or more credits, including math but not composition, within their first academic year have 36% higher odds of retention and 68% higher odds of graduation;
• complete 24 to 29 credits but do not complete either gateway course within their first academic year have 69% lower odds of retention and 71% lower odds of graduation;
• complete 30 credits without including math and composition have 52% lower odds of retention and 45% lower odds of graduation compared to students who complete both gateway courses within 24-29 total completed credits indicating that the total completed credits is less important than completing both gateway courses.

The chart below displays the relative odds for six-year graduation graphically.
