EARLY COMPLETION OF QUANTITATIVE REASONING/COMPOSITION REQUIREMENT

Analysis of campus data reflects national research indicating that students who successfully complete 30 credits in the first academic year, which include a college level math course and a college level composition course, demonstrate higher retention and graduation rates when compared to students who do not complete these milestones. While we recommend most students complete these milestones in the first academic year, for some students there may be extenuating circumstances to suggest a different approach. Students are encouraged to discuss their specific situation with their Academic Success Coordinator/Academic Advisor.
