Graduate Programs in Systems Engineering

The Master of Engineering program produces graduates who can design and manage complex multidisciplinary engineering systems with a rigorous systems engineering approach. The applied focus in courses builds skills that can be utilized immediately in current projects and prepares students for future career opportunities.

Graduates of the Master of Science program will be capable of designing and managing complex multidisciplinary engineering systems, with a rigorous systems engineering approach. The research component of the thesis- and project-based M.S. programs equip students with cutting edge skills in specific focus areas, preparing them for future career opportunities.

The Ph.D. prepares students to become leaders in systems engineering. Throughout the program, students produce significant academic contributions in terms of original research to the field, driving advancements and leading to improvements in energy efficiency, environmental impact, cybersecurity, and economic growth, among other areas of application for systems engineering.

The Doctor of Engineering in Systems Engineering degree will include core studies in systems engineering and its applications to complex systems in a working environment. Curriculum includes professional and applied/translational courses, a systems engineering practicum, and a dissertation to assist working professionals attain a higher level of value to their organizations.

Master's Programs

- Master of Science in Systems Engineering, Plan A
- Master of Science in Systems Engineering, Plan B
- Master of Engineering, Plan C, Systems Engineering Specialization

Ph.D.

Ph.D. in Systems Engineering

Professional Doctorate

Doctor of Engineering in Systems Engineering

Graduate Certificates

Certificate in Systems Engineering Practice
