

MAJOR IN GEOLOGY, HYDROGEOLOGY CONCENTRATION

The Hydrogeology concentration provides a rigorous education in geological aspects of surface and subsurface water science, resources and applications, while ensuring that students are well prepared for a variety of geosciences careers. Students will be particularly well prepared for employment in environmental, water resource, geotechnical, and groundwater disciplines, and for public- or private-sector careers managing or assessing water resources. The concentration provides strong preparation for graduate education in hydrogeology and other water science, environmental, and resource disciplines.
