MASTER OF SCIENCE IN MATERIALS SCIENCE AND ENGINEERING, PLAN A

Materials Science and Engineering (MSE) research is aimed at educating and training the next generation of out-of-the-box thinkers to solve the biggest global challenges.

By fostering a multidisciplinary approach, MSE degree programs strive to endow students with the tools to strategically question current design paradigms and drive innovative materials and manufacturing solutions across a diverse range of technological sectors. Motivated by modern materials challenges in energy, computing, transportation, impact protection, robotics, and global health care, MSE programs’ comprehensive, experiential training is designed to arm graduates with a modernized skill set tailored to confront those challenges head-on.

MSE degree programs are designed to engage students with:

• Active hands-on training in the latest materials characterization and computational methods, materials-focused intellectual property protection and technology transfer, and professional soft skill development.

• Enhanced educational opportunities promoted through industry partnerships, facilitating internships and class time spent in active commercial manufacturing labs.

• A diverse core of faculty mentors driving advances in controlling structure at the nanoscale, predictive property modeling, high performance metal, polymer and ceramic composites, photovoltaics, and additive manufacturing.

The overall objective of the MSE-MS Plan A (thesis) is to develop students to be science and engineering professionals who use their multidisciplinary problem solving skills to address global challenges in the field of materials science and engineering.

Research and Teaching

The M.S. Plan A requires a minimum of 30 credit hours, some of which may be fulfilled with the following
A minimum of 30 credits are required to complete this program.

1. Complete a minimum of 3 credits of MSE 699.
2. Students must register for 1 credit of MSE 793 each of their first 2 semesters in the program.
3. CHEM 511, CHEM 517, ECE 574, and PH 531 can be used as specialty courses, if not used to fulfill core requirements.
