Major in Art (B.F.A.), Sculpture Concentration

The Sculpture concentration challenges students to create a vibrant fusion between technical process, conceptual expression, and professionalism. Students are encouraged to experiment and innovate while exploring content in the areas of object-making, installation, site-based work, performance, time-based art, and digital processes. Through the integration of readings, classroom discussion, presentations, and individual research, the sculpture curriculum is designed to enable students to explore concepts and content relevant both in today’s contemporary society and in the art world. The synthesis of this broad spectrum of information is intended to aid students as they develop a unique personal vision for their artwork and studio practice. Refined technical skill will be developed and is a requirement for students as they progress through the Sculpture concentration.

**Major in Art, B.A.**

Throughout history, art has been a fundamental language of the human spirit. Visual arts express human experience through an ever-widening range of media and materials, some of which include: oils, acrylics, pastels, charcoal, clay, plaster, steel, bronze, wood, copper, litho stones, and digital media. Visual artists create abstract works and images of objects, people, nature, topography, and events. The Department of Art and Art History offers several options of study: The B.F.A. (Bachelor of Fine Arts) degree with studio concentrations in Drawing, Electronic Arts, Fibers, Graphic Design, Metalamithing, Painting, Photo Image Making, Pottery, Printmaking, and Sculpture; and the B.F.A. degree with
Learning Outcomes

Students will demonstrate:

- Fundamental knowledge and mastery of media and processes necessary to communicate meaning in a work of art.
- Ability to communicate clearly about their own art and the art of others.
- Knowledge about contemporary art and motivation to view and discuss current local, regional, and national exhibitions. Students well versed on contemporary art would:
  a. regularly read reviews of exhibitions in local and national newspapers;
  b. regularly read art periodicals;
  c. attend multiple exhibitions; and
  d. be knowledgeable about contemporary artists in their discipline (i.e., nationally known painters, sculptors, etc.).

Potential Occupations

Art graduates possess a number of transferable communication, analytical, and critical thinking skills appropriate for work in traditional business as well as positions in academia and roles as freelance artists, graphic designers, art educators, art historians, studio fine artists, and as "creatives" in government and industry. Many employers appreciate art majors for their multiple skills and their ability to adapt to a variety of tasks and work environments. Participation in internships, cooperative education, and service learning opportunities is highly recommended to enhance practical training and development. Graduates who go on for advanced studies can attain more responsible positions with the possibility of rising to top professional levels.

Depending on student interests, the electives taken, or the concentration selected, available career choices include, but are not limited to:
- art appraiser, art director, art therapist, exhibitor, designer, art critic, jeweler, gallery director, graphic design artist, freelance artist, sculptor, woodworker, welder, foundry worker, studio photographer, technical illustrator, painter, textile designer, weaver, art educator, art historian, art curator, art librarian, art museum educator, web page designer, photo lab technician, art restorer, and master printer.

The B.A. (Bachelor of Arts) in Art is a liberal arts degree with two concentrations: Art History and Integrated Visual Studies. The Art History concentration seeks to develop students' critical and analytical skills and ability to comprehend global visual arts within social, historical, cultural, and aesthetic frameworks. Students learn about the visual and material culture of societies from around the world, reflecting the global turn in the discipline. Traditional courses in Western art history are balanced against courses in the Arts of Africa, Native American Art, the Arts of the Ancient and Colonial Americas, and Pacific Art. Because of the comparative nature of Art History, students in the concentration are required to complete courses in a second field, a foreign language, and the philosophy of aesthetics. A capstone seminar introduces students to the fundamental toolbox of methodological approaches taken by professional art historians.

The Integrated Visual Studies concentration is an ideal program for students to develop skills as makers and thinkers. By making work and interpreting images from visual art, photography, film, television, and commercial imagery, students learn to analyze visual communication from a variety of aesthetic, theoretical, scientific, economic, sociological and historical viewpoints. Students take a relatively equal ratio of studio and academic classes that foster critical awareness of how society is reflected and produced through visual means in the twenty-first century. Visual Studies students have the curricular flexibility to pursue other academic interests and extracurricular activities with greater intensity, as well as to pursue explorations in the theoretical and technical aspects of art making within a studio practice.

Both concentrations begin their study with the foundation program. Freshmen study foundation courses in form and observation, color and composition, materials and space, and global art history.

Student Learning Outcomes

Art History students will demonstrate:

- Knowledge of the tools and techniques of art historical research and scholarship.
- Communication skills, original thinking, art historical interpretation, and research skills in written form, resulting in a lengthy work of original scholarship.
- Communication skills, original thinking, art historical interpretation, and research skills in oral form.
- Demonstrate general knowledge of the monuments and principal artists of all major art periods of the past, including a broad understanding of the art of the twentieth century and acquaintance with the art history of non-Western cultures.
- Adequate mastery of a foreign language to support research through the reading of primary source materials.
- Functional knowledge of the creative process.

Integrated Visual Studies students will demonstrate:

- Communication skills in written and oral form with precision, cogency, and rhetorical force.
- The ability to explain and defend creative/research effectively and rationally; advocating for their world view.
- Skills of invention and innovation—developing things and ideas that never existed before.

Major in Art (BA), Art History Concentration

The Art History concentration provides a basic preparation in art history for graduate studies, careers in research and teaching at the college level, positions in museums, libraries, or private collections, or for writing and criticism in the arts. In addition to a high degree of research experience, students will complete a second field or minor and one year of foreign language. In-depth study in a second field allows students to refine their focus.

Requirements

Effective Fall 2018

A Portfolio Review is required to be submitted for review upon completion of three ART studio courses for continuing students and upon completion of two ART studio courses for transfer students and students who have changed majors.
A minimum grade of C (2.000) or better is required in all upper-division Art History coursework.

Major in Art (BA), Integrated Visual Studies Concentration

The Integrated Visual Studies concentration is an ideal program for students to develop skills as makers and thinkers. Students take a relatively equal ratio of studio and academic classes that foster critical awareness of how society is reflected and produced through visual means in the twenty-first century.

By making work and interpreting images from art, photography, film, television and commercial imagery, students learn to analyze visual communication from a variety of aesthetic, theoretical, scientific, economic, sociological and historical viewpoints. A combination of studio and academic classes are required.

The integrated visual studies concentration enables students to organize multiple approaches to visual thinking that cut across various disciplines into a logical whole. Integrated visual studies students will have the curricular flexibility to pursue other academic interests and extracurricular activities with greater intensity, as well as to pursue explorations in the theoretical and technical aspects of art-making within a studio practice.

Master of Fine Arts (M.F.A.)

The M.F.A. program in studio art promotes a high level of artistic achievement, creative and scholarly research, and relevant professional practice. In addition to required studio courses, the program fosters student engagement with faculty and peers through required coursework in contemporary art theory, art criticism, and art history. In consultation with their advisers, students plan a sequence of elective courses that both complements and challenges their studio practice.

Major in Communication Studies

Communication Studies majors receive a broad-based, liberal arts education, designed to equip them for the challenges of the 21st century, the need to adapt to a rapidly changing workplace, and the likelihood of more than one career. The major encompasses many facets of media and visual culture, relational and organizational communication, and rhetoric and civic engagement. Along with courses in communication studies, the major requires courses in the arts and humanities, the social sciences, and history, and a minor or second major.

The department’s goals for undergraduate majors include helping students to achieve an outstanding education in communication studies, to further their knowledge and understanding of human communication, and to provide leadership in communication activities. In so doing, we hope to help students prepare for successful careers, the duties of citizenship, and productive and rewarding lives.

Learning Outcomes

Students will demonstrate:

Knowledge about the history and practice of our discipline in three specific areas: rhetoric and civic engagement, media and visual culture, and relational and organizational communication. Students will be able to explain the utility of theories from these areas and be able to utilize research methods to explore questions from each area of inquiry.

Skills that allow them apply their knowledge of the major as they address contemporary issues salient to their personal, professional, and civic lives. They will be skilled in both oral and written communication, being able to develop and deliver coherent, well-organized claims to specific audiences. Students will also develop critical thinking skills that allow them to analyze texts, situations, or issues using credible evidence and following a logical, systematic, and/or precise structure.

Potential Occupations

The Communication Studies major, like many liberal arts majors, provides students with a broad academic background suitable for a variety of jobs in the public and private sectors. Majors are trained to think independently and critically, communicate effectively, and function in a multicultural world. Employers appreciate communication studies majors for their multiple skills and their ability to adapt to a variety of tasks and work environments.

Many majors find employment in public relations/marketing, politics, sales, human relations, government, business management, convention and meeting planning, education, and computer-mediated communication. Some students move on to graduate work in communication studies and to post-graduate study in law and theology.

Career opportunities include, but are not limited to employee relations specialist, employment counselor, human resource consultant, industrial relations representative, public relations specialist, labor relations consultant, training director, vocational rehabilitation counselor, advance agent, business communicator, equal opportunity representative, foreign service officer, cooperative extension service worker, politician, lobbyist, speechwriter, press agent, literary agent, interviewer, sales representative, reporter, lawyer, teacher.

Internships are available to Communication Studies majors and are highly recommended to enhance practical training and development. Graduates who seek advanced studies can attain more responsible positions with the possibility of rising to top professional levels.

Ph.D. in Communication

The Ph.D. in Communication trains scholars, teachers, and professionals to engage social, political, and professional challenges using advanced expertise in the field of communication.

The program is shaped by the three areas of expertise present in our department. These three areas examine communication and engagement from three perspectives:

1. Interpersonal, Intercultural, and Organizational Communication: For many individuals, engagement with the public world grows out of their relational lives and is expressed in the organizations to which they belong and in which they work. Professors and students in this area will explore communication in relational or interpersonal systems, organizing and work contexts, and within national and global arenas. Here, the focus is on exploring how individuals respond to and participate as active members in various forms of community, paying special attention to the ways in which communicative actions can create, sustain, and disable engaged citizenship.

2. Media and Visual Culture: In the contemporary, globalized world, engaged citizenship often flows through media and is represented and enacted within popular culture. Professors and students in the area explore the mediation of public culture with particular attention to film, television, digital discourse, and the globaliziation of media institutions. Here, the focus is on the construction of critical media literacies and understandings of how our mediated forms of communication engage or disengage individuals as community members, empowering or disempowering them as political agents.

3. Rhetoric and Civic Engagement: In popular conversation, “rhetoric” is often understood to mean empty speech. Communication scholars, however, trace the meaning of “rhetoric” to antiquity when thinkers such as Aristotle and Cicero placed rhetorical studies at the center of democratic engagement. Since then, rhetorical studies have explored public engagement and community building, examining the role of communication in civic life. The resurgence of rhetorical studies in the humanities is founded on a renewed sense of the importance of rhetoric to engaged citizenship in the 21st century. Professors and students in this area explore the role of public communication in creating, maintaining, and undermining civic culture.

Although these three areas of departmental emphasis are distinct, the strength of the program is the collaborative overlapping of these three areas. As a community, we have developed a cutting-edge doctoral program that takes advantage of the shared commitment to study and engage in transformative communication.

Major in Economics

Economics is the study of how people and societies use scarce resources to produce the things they want. Economic theory provides a framework for understanding economic issues, analyzing and predicting the likely effects of economic behavior and government policies, and formulating efficient and equitable solutions to pressing economic problems.

A strong liberal arts curriculum including arts and humanities, social and natural sciences, advanced composition, mathematics, and statistics provides the depth and breadth of knowledge needed to systematically and logically analyze problems, generate and test ideas, and develop effective communication and quantitative skills. Economics majors develop an appreciation of economic issues, and learn to analyze and critically evaluate economic phenomena and policies. The major core includes four semesters of economic theory, a semester of econometrics, a senior capstone seminar, and several semesters of economics electives covering a wide variety of economic topics from environmental and natural resource economics to the history of economic institutions and political economy.

Learning Outcomes

Students will:

- Display command of basic microeconomic concepts such as rationality, cost/benefit, supply and demand theory, decision making at the margin, monopoly and competition, and efficiency and equity.
- Display command of basic macroeconomic concepts such as aggregate demand and supply, fiscal and monetary policy, and the use of these policies in the macro-economy.
- Understand and analyze a broad array of economic issues found in the news and understand how the economic aspects of society work.

Potential Occupations

Economists are employed in a wide variety of fields from education and research to business and government. Nonprofit and international organizations use economists in overseas development, environmental conservation, and international relations. Economics, like many liberal arts majors, provides students with a broad academic background suitable for a variety of jobs. Economics majors are trained to think independently and critically, communicate effectively, and function in a multicultural world. Many employers appreciate liberal arts majors for their multiple skills and their ability to adapt to a variety of tasks and work environments. Careers for graduates are available in education, business, and government. Participation in internships or cooperative education opportunities is highly recommended to enhance practical training and development. Graduates who go on for advanced studies can pursue careers in economics or attain advanced positions with the possibility of rising to top professional levels.

Depending on interests, the electives taken, or the minor selected, available career choices include, but are not limited to: commodities/stock broker, financial analyst, economic forecaster, trust administrator, loan counselor, pension funds administrator, foreign trade analyst, public policy analyst, regional/urban planner, foreign service officer, tax auditor, natural resource analyst, educator, program administrator, researcher, community organizer, environmental activist, international aid organization analyst or administrator, marketing analyst, purchasing agent, public relations/media planner, program consultant, contract administrator, systems evaluator, personnel planner, portfolio administrator, finance manager, secondary school teacher.

Requirements

Effective Fall 2019

Economics majors must achieve a minimum grade of 1.670 (C-) in each of the economics courses counted toward the major.

Major in English

The English department at CSU is a vibrant and diverse community. We are home to poets and linguists, literacy researchers and teacher educators, novelists and literary scholars, composition specialists and writers of creative nonfiction. We share a passion for exploring the multiple and dynamic ways that the English language is used to meet the demands of life in the twenty-first century. Students, staff, and faculty are committed to inclusive excellence, intellectual growth, and the creation of a more just and sustainable world.

English majors develop an understanding of diverse cultures, literary traditions, and great works of English, American, and world literature. Students expand their ability to analyze a variety of texts and view them through the lenses of diverse critical perspectives. Majors develop the ability to write for both specialized and general audiences. There are five concentrations from which students can choose:

- Creative Writing,
- English Education,
- Language,
- Literature, or
- Writing, Rhetoric and Literacy.

Learning Outcomes

Upon completion of the B.A. in English, the accomplished graduate shall be able to:

- work with, explain, or analyze English-language writings of the broadest textual range with an eye practiced in close-reading, historical context, and rigorous critical judgment;
- write with flexibility, effectiveness, and originality for diverse rhetorical purposes and audiences;
- read and write with technical awareness of language foundations, contexts of literacy, multi-modal environments, and theories of discourse and meaning; and
- integrate English literacy (disciplinary methods of reading and analysis) with interdisciplinary knowledge and action.
Potential Occupations

A major in English prepares students for business, government, or education careers that require broadly educated people who can think critically, communicate effectively, analyze texts, and write well. Many employers appreciate liberal arts majors for their multiple skills and their ability to adapt to a variety of tasks and work environments.

The department encourages experiential education by offering a variety of internship opportunities.

Students are also invited to generate their own positions in fields of interests, as well as pursue established local, regional, or national internships. Graduates who go on for advanced studies can attain more responsible positions with the possibility of rising to top professional levels.

Depending on a student’s interests, the electives taken, or the concentration selected, available career choices include, but are not limited to: copy editor; project editor; manuscript reader or story analyst; sales representative; publicity and promotion specialist; advertising coordinator; production specialist; assistant book publicist; contracts and permission specialist; agency or arts administrator; human resource manager; human services program developer; public relations; English teacher; teacher of English as a second language; curriculum developer; education administrator; grant writer; technical writer for business, industry, or science; magazine, newspaper, television, education, or government writer; biographer or writer of prose, fiction, or nonfiction; lyricist.

Concentrations

- Creative Writing Concentration
- English Education Concentration
- Language Concentration
- Literature Concentration
- Writing, Rhetoric and Literacy Concentration

Major in English, Creative Writing Concentration

The Creative Writing concentration gives students the opportunity to strengthen their creative writing skills, and infuses their analytic reading skills with imagination. Students take beginning, intermediate, and advanced courses in one or more of the following genres: fiction, poetry, and creative nonfiction. Intermediate and advanced courses are primarily workshop classes in which students read and critique one another’s work. At the center of all creative writing courses is the study of craft. Students in the Creative Writing concentration also take a wide variety of English and literature courses which prepare them to be writers by schooling them in literary traditions and styles. An internship program for all English majors offers Creative Writing students positions that may lead to employment. In addition, the Creative Writing program runs a vibrant reading series that gives students the chance to meet visiting writers.

Requirements
Effective Fall 2015

For graduation, an English major must attain a minimum grade point average of 2.000 in upper-division composition and English courses.

Major in English, English Education Concentration

The English Education concentration provides students with preparation for teaching in secondary schools. It is designed for students who wish to pursue a career in teaching language arts, and offers a range of courses in language, literature, and writing. Students may receive an endorsement from the state of Colorado in English/Language Arts. In addition to the common requirements for the English major, students take several extra courses in English, as well as education classes through the School of Education.

Students interested in pursuing a teaching license through CSU may refer to the Center for Educator Preparation (CEP) (http://cep.chhs.colostate.edu).

Requirements Effective Fall 2015

For graduation, an English major must attain a minimum grade point average of 2.000 in upper-division composition and English courses.

## Major in English, Literature Concentration

The Literature concentration offers a curriculum featuring critical study of literature (from ancient to contemporary) in poetry, prose, and drama. Students will become familiar with major figures and forces, but also with non-traditional writers outside the established canon. Courses in literary theory will give students a sense of the wide variety of approaches that can be applied to the interpretation of texts. In all courses, students practice a number of different types of analytical and critical writing.

### Requirements

**Effective Fall 2018**

For graduation, an English major must attain a minimum grade point average of 2.000 in all Composition (CO) and English (E) courses and a minimum grade point average of 2.000 in all upper-division Composition (CO) and English (E) courses.

Minor in Creative Writing

The study of creative writing emphasizes creativity, self-motivation, persistence, and openness to criticism – skills many employers look for when hiring. It gives students the opportunity to explore their artistic talents and devote time to producing creative work that complements achievements in their majors.

This seven-course sequence combines small, discussion-based writing workshops with classes in composition or literature. The minor is open to majors in all disciplines except English, and offers a unique opportunity to balance work in the sciences, business, engineering, or the humanities with the imaginative freedom and cultural engagement of an education in the arts. Students will gain experience in two genres (poetry, fiction, and/or creative nonfiction) as they study with published authors, interact with visiting writers, and gain familiarity with today's literary landscape.

TO DECLARE: Visit the English Office, Eddy 359. For more information: www.english.colostate.edu, or email Sasha Steensen, Director of Creative Writing: sasha.steensen@colostate.edu.

Requirements
Effective Fall 2018

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Minor in English

Minors allow students to focus on an area that complements their major, enhance their knowledge and skills, or pursue a particular interest. The Department of English offers three minors: English, Creative Writing, and an Interdisciplinary Minor in Linguistics and Culture. When visiting the department’s office to officially declare an English or English-related minor (http://english.colostate.edu/undergraduate/english-related-minors), students will be provided with a course guide for that minor. To speak with an advisor regarding a minor, contact Professor Dan Beachy-Quick by email at dan.beachy-quick@colostate.edu, in-person during office hours, or by appointment in Eddy Hall, Room 343.

For information about English and Composition course offerings and registration procedures for the upcoming semester or summer session, please contact Sheila Dargon at Sheila.Dargon@colostate.edu.

Minor in English

The minor in English offers opportunities for students to create a unique path through English and Composition classes. Requirements are open: 21 credits total of E and/or upper-division CO courses, 12 credits of which must be at the 300-level or higher. This freedom allows students to pursue what they love most in language, literature, composition, and writing. Students will gain a set of skills, critical and creative both, that will complement both their major and future career.

Requirements

Effective Spring 1996

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

CO 150, E 487A, and E 487B may not count toward the minor. CO 300, CO 301A, CO 301B, CO 301C, CO 301D, CO 302, and CO 401 may count toward the minor. A minimum of 6 credits must be taken at CSU.

Graduate Certificate in TESOL Education

The Graduate Certificate in TESOL Education provides graduates with practical, theoretical, and critical knowledge of the English language and of methods for teaching it in various social and academic settings. The courses required for the certificate promote reflective inquiry, provide students with the necessary tools for ongoing professional growth, serve as models of effective pedagogy, and introduce students to the various ways in which instruction can be enhanced by contemporary technologies.

Graduate Program in Ethnic Studies

The Department of Ethnic Studies seeks to teach students to understand the unique and interlocking experiences of racially marginalized groups and to analyze how race intersects with other forces of social differentiation, such as gender, sexuality, and class, in national and international contexts. The program recognizes the importance not only of the history of racial exclusion and marginalization but also the creative ways in which various racial groups sustain their humanity through cultural preservation, transference, and renewal. Ethnic Studies is committed to nurturing students to become culturally aware, astute, civic-minded individuals who strive to strengthen the communities in which they reside. Because the study of ethnic groups intrinsically reveals how race structures life chances and opportunities, the scholarly orientation of the department reflects a commitment to meaningful changes in public policy and social life. The department offers graduate-level education to prepare students as leaders in the field of ethnic studies.

Students interested in earning a Master of Arts degree in Ethnic Studies should refer to the Graduate and Professional Bulletin and the Department of Ethnic Studies (http://ethnicstudies.colostate.edu).

**Major in Ethnic Studies**

The Ethnic Studies major involves critically examining the interlocking forces of race, gender, class, sexuality, and other forms of social differentiation that shape the histories and experiences of racially marginalized groups. The programs of study interrogate how these socially constructed ideas impact distribution of social goods, affect life chances, shape identities and worldviews, and reproduce social inequalities. Drawing from interdisciplinary and comparative theoretical frameworks, we bring to bear issues of power, privilege, and social justice pertinent to the experiences of diverse populations in the U.S. and abroad. We are especially committed to nurturing civic-minded and culturally informed students who strive to strengthen the communities in which they reside. In support of the land-grant mission of CSU, students and faculty in the Ethnic Studies program engage with communities on and off campus in order to effect meaningful change in public policy and social life.

**Learning Outcomes**

Upon completion of the program of study, students will demonstrate:

- An understanding of the key concepts shaping the experiences of various racial and ethnic groups in the United States and abroad.
- Familiarity with social histories and experiences of racial and ethnic groups.
- Effective oral communication, writing, and research skills.
- An increase in critical thinking, intellectual, and personal growth.
- An understanding of the value of social consciousness and personal responsibility.

**Potential Occupations**

Both theoretical understandings of and practical experience in cross-cultural and inter-ethnic relations are invaluable in today's world. Ethnic Studies graduates work in the following fields and occupations:

- K-12 and adult education (e.g. refugee/immigrant education, diversity training in the private sector);
- Human social services including counseling, health care, and civil service;
- Federal, state, tribal, and local government, and community service;
- Natural resources development and technology transfer; practices, economics, and law in ethnic contexts;
- Communications media such as newspaper, radio, video, and television;
- Archival and museum studies; non-profit agencies; and advanced studies.
including graduate programs in the social sciences and professional programs (e.g. law, social work).

**Concentrations**

- Social Studies Teaching Concentration

**Requirements**

Requirements
Effective Fall 2015

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Students in the Ethnic Studies minor must earn a minimum grade of C (2.000) for all Ethnic Studies courses required for the minor.

Major in History

History analyzes the course of human affairs through evidence and reason. It sheds light on our present by showing how individuals and groups in the past made decisions, exercised power, and responded to changes through revolution, migration, war, ecological disturbance, and globalization. History also explains how people understood and sometimes exploited class, ethnicity, gender, race, and sexuality, and how they conceptualized the world through religion and ideology.

The Major in History also offers courses in public history (such as the National Parks, museums, documentary films, historic preservation, and urban planning), a Social Studies Teaching concentration, and courses in digital history which give students the opportunity to apply twenty-
first century tools and technologies to understand and interpret the past. Students can focus their coursework in these areas.

The Major in History is designed to enlarge students’ knowledge about the past, improve their ability to think logically and critically, and sharpen their powers of written and oral expression. It is an outstanding choice for students planning further professional study in law, medicine, ministry, academia, business, and many other fields.

Learning Outcomes
Students in History courses:

• Analyze and interpret historical materials, such as documents, material artifacts, and images;
• Engage in chronological reasoning to understand causation and change over time;
• Examine critically how people in the past understood their own history in scholarly works and in popular forms such as myths, memorials, and other public commemorations;
• Interpret, write, and speak about the past using evidence and according to the standards and expectations of the historical discipline, including honest use of evidence, openness to multiple perspectives, and historical empathy; and
• Analyze both change and continuities over time by considering how events such as revolution, migration, war, ecological disturbance, and globalization changed societies as well as how structures like class, ethnicity, gender, race, sexuality, climate and religion shaped societies over a longer time horizon.

Potential Occupations
• Government official in foreign service, national security, military, cultural resources management, and other areas;
• History teacher in public and private schools;
• Any professional occupation in business or public service requiring a liberal arts education and skills in research, writing, and the analysis of information;
• With additional graduate training: lawyer, physician, social worker, minister, librarian, museum curator, archivist, professor, educational administrator, or other professional.

Concentrations
• General History Concentration
• Language Concentration
• Social and Behavioral Sciences Concentration
• Social Studies Teaching Concentration

Major in History, General History Concentration
The General History concentration is an excellent choice for students planning careers in history, government service, other professional occupations requiring broad intellectual and practical skills. This concentration is also a good choice for students who want an introduction to and training in public history to work in museums, government agencies, consulting, and historical societies. History majors who select the General History concentration must complete another major or minor offered at CSU (except the minor in History).

Requirements
Effective Fall 2019
A minimum grade of C (2.00) must be earned in HIST 492 and all 100-level courses required in the history major.

Minor in History

The minor in History allows students to explore historical questions and issues while broadly exploring the past or pursuing a specific concentration. In addition to gaining knowledge in specific subjects – including the history of humans and the environment, empires, race, immigration, war and society, gender and sexuality, digital history, public history, and religion across multiple continents – the minor in History trains students to use and apply the tools and methods of historical analysis.

The customizable minor consists of 21 semester credit hours, 12 of which must be taken at the upper division level, and complements a wide variety of majors in other disciplines. Majors in international studies, political science, economics, natural resources, foreign languages, literature, and philosophy will be provided with a historical understanding of social, cultural, political, and economic issues. Majors in business, mathematics, the sciences, and communication can use the minor to apply interpretive and analytical skills to evaluate and assess evidence and sources.

To declare the minor in History, please obtain a declaration form from the History Office, B356 Clark.

Effective Fall 2019

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Major in Journalism and Media Communication

The study of journalism, mass communication, and specialized media combines high-level professional training with a broad foundation in the liberal arts. All students complete a common 21-credit core, including writing, multimedia, and conceptual courses, as well as a capstone course and an internship. Students work closely with a faculty advisor to select an additional 19 credits in a focus area crafted to match their career interests. Practical experience can be gained on the staffs of the daily Rocky Mountain Collegian, the award-winning campus television station Collegian TV, College Avenue magazine, and KCSU-FM Radio. Graduating seniors present professional portfolios for assessment by panels of faculty and communication professionals from Denver and elsewhere in Colorado. Because successful communicators require broad knowledge, this flexible program encourages development of a background in the humanities, social sciences, natural sciences, and in-depth study in an area of interest outside journalism. The addition of a minor or double major in disciplines such as political science, information
technology, history, economics, business, communication studies, psychology, the arts, or natural or applied sciences is possible.

The Department of Journalism and Media Communication is one of a relatively small number of departments formally recognized by the Accrediting Council on Education in Journalism and Mass Communications. Participation in volunteer activities, cooperative education opportunities, or communication-related part time jobs is highly recommended to enhance practical training and development.

Learning Outcomes

Students will demonstrate:

- Competence in writing, editing, and producing media messages as well as in planning, designing, and evaluating effective public information programs.
- Knowledge and use of communication theory and research principles to guide the selection of communication audiences, message content and format, and media channels to enhance communication impact.
- Understanding of the ethics, laws, and values associated with professional communication activity.

Potential Occupations

Technical and Science Communication Minor

Dakota Cotner, Coordinator
Journalism and Media Communication
Clark Building, Room C244

The minor in Technical and Science Communication is designed to educate highly qualified communicators who have interests in specialized academic disciplines and career fields. Because science and technology often involve complicated research and processes, communicating the results of that work requires special skills. This program is designed to prepare students for a wide range of niche career opportunities in media, corporate communication, technology related industries, and scientific environments.

Students in this minor will learn to write and manage communication efforts, with a focus on turning complex ideas and processes into simple, clear messages applicable for publication and electronic delivery via broadcast, cable, or online. The accuracy and effectiveness of this communication is especially important as the internet and the ubiquity of mobile devices make the delivery and consumption of information widely available. Having the skills to interpret and communicate complicated processes provides significant career advantages in one of the highest-paying areas of professional communication.

Requirements

Effective Fall 2018

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Master of Communications and Media Management, Plan C (M.C.M.M.)

The Master of Communications and Media Management, Plan C (M.C.M.M.) is designed for students with a bachelor’s degree seeking to transition to a communication-related career, or for those seeking to move up into a management role in their present media profession. The rapid rate of technological change in media technology has created a need for constant retraining and the acquisition of new multimedia knowledge and management skills. The program curriculum is designed to provide students with a comprehensive overview of “new media” developments. Upon completion of the program, students will be prepared to strategize and manage specific communications projects, as well as manage and direct staff members or contract workers in a communications unit within a corporate, educational, or nonprofit organization.

Dr. Daniel Goble, Director, School of Music, Theatre, and Dance

Undergraduate

The School of Music, Theatre, and Dance at CSU provides a rigorous undergraduate educational experience.

The Music program is focused on the belief that music is both an artistic and intellectual pursuit. We offer intense training in specialized music disciplines combined with a balance of core music courses in music history and theory. Most of all, our renowned and versatile faculty are committed to helping students discover their own unique identities through music. We offer B.M. degrees in Music Therapy, Music Education, Music Composition, and Music Performance, as well as a B.A. in Music. Additionally undergraduates can earn a performance-based music minor.

The Theatre program emphasizes a reciprocal relationship between practice and scholarly study, combining practical training with theory and history, while stressing creative critical thinking. Students are encouraged to engage intellectual and physical approaches to explore diverse cultural forms, historical traditions, and contemporary theatre practice. During their first two years as Theatre majors, all students will take the same core of courses in all sub-disciplines. Following their sophomore review, students will be directed into one of three concentrations offered to Theatre majors at CSU: General Theatre, Performance, and Theatrical Design and Production.
The Dance program offers a rigorous program in classical and contemporary dance education culminating in a B.A. in Dance. The degree requires a total of 120 credits with the following foci: technical training and foundations, performance, composition, pedagogy, professional preparation, theatrical production and design, and academics. In the Dance major, students explore the many possibilities for movement expression, along with creativity and scholarly examination, in a challenging and supportive environment.

Major in Dance

Office in University Center for the Arts, Room 120  
(970) 491-5529  
dance.colostate.edu (http://dance.colostate.edu)
CSU offers a rigorous program in classical and contemporary dance education culminating in a B.A. in Dance. The degree requires a total of 120 credits with the following focus: technical training and foundations, performance, composition, pedagogy, professional preparation, theatrical production and design, and academics. In the Dance major, students explore the many possibilities for movement expression, along with creativity and scholarly examination, in a challenging and supportive environment. Dance major and scholarship auditions for prospective students (high school seniors or transfers) are held during Fall and Spring Visit Days. The audition assesses training background, technical level, and the potential to successfully complete the degree program at an advanced and/or pre-professional level. To be enrolled in the Dance major, students should have professional quality dance training in both ballet and modern technique, be at the intermediate technical level, and have the ability to withstand rigorous daily work throughout the year. Other forms of previous dance training are applicable and highly encouraged. For pre-Dance students and non-majors, enrollment in dance technique classes depends on space availability, technical level, and suitability, and takes place during the classes of the first week of the semester as ‘consent of instructor’ is required. All technique classes are accompanied by accomplished musicians in piano, percussion, and a variety of other instruments. Performance, choreographic, and production opportunities take place each semester and students are encouraged to collaborate with other majors in music, theatre, and the visual arts. Visiting guest artists teach master classes and workshops and choreograph for the students on a regular basis. Supervised student teaching experiences are offered with different age groups and in a variety of situations. Upon graduation, students will have a theoretical and practical foundation in dance. Graduates will achieve an intermediate/advanced level of proficiency in modern and ballet technique and be able to apply this knowledge to the areas of professional performance, choreography, and teaching. They will have a foundation in technical production and design which supports dance and theatrical productions. They will have a working knowledge of anatomy, kinesiology, and various movement theories relating to dance techniques. They will have a solid knowledge and appreciation of the history and philosophy of dance from many cultures and time periods.

**Potential Occupations**

Dance careers are rigorous and demanding, requiring years of training and discipline. Dance professionals must be versatile with a broad base of experiences in dance or related fields. Dance majors often select a second major such as music, theatre, business, occupational therapy, technical journalism, or exercise and sport science to enhance their career prospects. Experience acquired through extracurricular performances or internships is highly recommended to enhance practical training, development, and career opportunities. Students are encouraged to go on for advanced study at the graduate level in dance in order to secure teaching positions in higher education. Some examples of the career opportunities in dance include, but are not limited to: professional dancer, professional choreographer, artistic director, university/college faculty, studio owner and faculty, conservatory or school faculty, dance critic, dance therapist, dance somatics specialist, arts manager, lighting designer, costume designer, sound designer, theatre technician, production crew, producer, fashion coordinator, special events coordinator, makeup artist, musical theatre director.

**Major in Music (B.M.)**

Our primary goal is to prepare students to become highly skilled music educators, music therapists, performers, and composers. Program goals encourage and develop high standards of teaching, scholarship, performance, and research in music. We are pleased to offer small academic classes, applied study with highly qualified faculty, and careful attention to advising. Courses in music appreciation, music theory fundamentals, and ensembles are open to all students regardless of major.

A successful audition is required prior to entrance into any B.M. Music degree program. Please refer to the admissions office of the School of Music, Theatre, and Dance (https://music.colostate.edu/admissions/undergrad-apply) for information regarding auditions and specific application requirements.

**Learning Outcomes**

Students will demonstrate:

- Ability to perform music from a variety of historical/style periods, and exhibit the appropriate skills for musical self-expression in juried performances. These skills include: technique, musicianship, tone, diction/articulation, style, interpretation, sight-reading, rhythm, and artistry.
- Keyboard skills.
- The capacity to create original or derivative music.
- Understanding of the common elements and organizational patterns of music, including musical forms, processes, and structures.
- Knowledge of music history and repertory, including representative composers and works according to the area of specialization, as well as study and experiences with music in addition to that of the primary culture encompassing the area of specialization.

Students are also expected to learn music literature from all periods through aural and score analysis. Performance skills are tested at the end of the sophomore year and in a graduation recital if required by the degree option. Some programs require satisfactory completion of supervised student teaching, an internship, or a senior project.

Major in Music (B.M.), Music Education Concentration

The Music Education concentration prepares students for teaching choral, instrumental, and general music in elementary and secondary schools. This degree prepares students to apply for music teaching licensure (grades K-12) in the state of Colorado. CSU’s outstanding music education faculty members are in demand as clinicians, guest lecturers, conductors, and researchers. A feature unique to the accredited music education curriculum is extensive field experience that students receive throughout their coursework, culminating in a semester of student teaching at the end of the program. Students must select one of two options: instrumental or choral.

A successful audition is required prior to entrance into the B.M. in Music.

### Options

- Choral Option
- Instrumental Option

Major in Music (B.M.), Music Therapy Concentration

The Music Therapy concentration is designed to prepare students for careers in music therapy, an allied health profession whose members generally work as part of interdisciplinary teams in hospitals, clinics, rehabilitation facilities, assisted living centers, and special education settings. Some music therapists maintain private practices or serve as consultants. Music therapists use music to facilitate motor skills, cognitive abilities, communication, and social outcomes for individuals with disease or disability. The Music Therapy concentration at CSU is internationally recognized for its leadership in clinical training and research. The curriculum includes a strong emphasis in music, the neurosciences, psychology, and music therapy methods.

Requirements
Effective Fall 2017

A minimum grade of C (2.000) is required in all music courses used to satisfy the requirements of the BM in Music, Music Therapy Concentration.

**Major in Music (B.A.)**

The Bachelor of Arts (B.A.) in Music allows students to study music within a larger context of a liberal education. In comparison to the curriculum leading to the Bachelor of Music (B.M.), less emphasis is placed on studies specifically in music, with greater flexibility for studies in a field outside of music. In lieu of a larger number of credits in music as required for the B.M, the B.A. student completes a 21-credit option in an area outside of music. In addition, completion of a major paper or capstone recital (half recital) is required during the senior year.

A successful audition is required prior to entrance into the B.A. in Music.

**Requirements**

A minimum grade of C is required in all music courses used to satisfy the requirements of the major programs (B.A. and B.M.) in music.

### Master of Music, Choral Conducting Specialization

The program is committed to musical excellence with a curriculum designed to build a well-rounded conductor/teacher, using the musical and personal strengths of the graduate choral conducting student.

By the completion of the program, students will have developed advanced conducting and rehearsal techniques that are appropriate to a variety of musical genres. Students learn effective rehearsal techniques, score preparation, and become knowledgeable scholars of important choral scores representing repertoire of various music periods and secular and sacred styles.

The choral conducting specialization accepts a limited number of students who pursue a variety of professional goals, including public school music education and directors of church-based choral ensembles. Students who are full-time music educators at the middle/high school levels will be considered if they have three years prior teaching experience, and are presently conducting an ensemble(s). Students who are not public school educators must show a minimum of three years of full-time music/conducting employment, and be presently conducting a high school, religious or community ensemble. To develop the musicianship and skills that will be important for the student’s future professional success, graduate courses are organized in the areas of...
music literature and theory, the choral/vocal instrument, conducting, and teaching.

Master of Music, Instrumental Conducting Specialization

The program is committed to musical excellence with a curriculum designed to build a well-rounded conductor/teacher, using the musical and personal strengths of the graduate conducting student. The program offers two options: the M.M., Choral Conducting Specialization, and the M.M., Instrumental Conducting Specialization, both of which require a two-year residency.

Master of Music, Music Education—Composition Specialization

This new, multi-disciplinary degree is designed for students who hold either a bachelor's degree in music education or music composition. The purpose of the program is to produce professional composers and music educators that can create original compositions and arrangements that align with contemporary K–12 music curricula. Further, this program is intended to aid current educators in the incorporation of composition and related activities (such as improvisation and analysis) into their classrooms. Students will receive training in the areas of music education research and pedagogy, applied music composition, arranging/scoring for educational ensembles, and music composition, improvisation, and analysis as related to music education/pedagogy. This program intends to produce graduates that demonstrate competencies as professional composers and music educators related directly to work in the field of music composition for educational ensembles at the K–12 levels. Graduates will also demonstrate competencies in the application of music composition and related creative musical activities within K–12 music education curricula.

Master of Music, Plan B, Music Therapy Specialization

The degree is intended to provide Board Certified music therapists with advanced training in clinical skills and research. Our curriculum specializes in neuroscience and evidence-based music therapy to improve sensorimotor, speech and language and cognitive function in children and adults who have disabilities. Specifically, the study of music therapy is designed to prepare music therapists for advanced clinical work in music therapy, as music therapy supervisors and administrators and for teaching positions at the college or university level.

Two master's curriculum tracks are offered: the first is a thesis program of 30 credit hours designed to provide students with the opportunity to complete a substantial research project. The second track is a 32-hour program that requires, in lieu of a thesis, additional course work in music therapy, a final project, and a common final exam. Either program prepares the student to pursue doctoral study. Our academic curricula meet the standards of the American Music Therapy Association and the National Association of Schools of Music. Applicants are expected to be Board-Certified Music Therapists (or eligible to sit for the exam) and demonstrate excellent musicianship and interpersonal skills.

The Master of Music, Music Therapy Specialization is offered on-campus or online.

**Major in Theatre**

Office in University Center for the Arts, Room 120
(970) 491-5529
theatre.colostate.edu (http://theatre.colostate.edu)

Professor Price Johnston, Director

During their first two years in the 120-credit Bachelor of Arts (B.A.) in Theatre, theatre students enroll in a core of courses that provide a solid foundation as they pursue excellence in their discipline. Upon admission to CSU and the declaration of theatre as their major, students are directed into one of three concentrations: Performance, Design and Technology, and General Theatre. No matter which concentration is selected, students are equally prepared for graduate school or potential entry-level positions in the theatrical professions or creative industries.

Comprehensive training, both on and off stage, occurs in the classroom, in rehearsal studios, as well as during theatrical productions, produced by a company of student actors, directors, designers, and technicians. Each season includes classics, contemporary plays, and musicals.

Striving to always maintain the quality of a regional theatre, four main-stage productions — including one musical — are annually produced in the University Theatre (a 300-seat thrust theatre) and the Studio Theatre (a flexible black box seating 100), two opera-theatre productions in the 550-seat Griffin Concert Hall, and four dance concerts in the 200-seat University Dance Theatre round out the production schedule.

**Concentrations**

- Design and Technology Concentration
- General Theatre Concentration
- Performance Concentration

**Major in Theatre, Design and Technology Concentration**

Students entering the Design and Technology Concentration are exposed to multiple disciplines and design areas within the performing arts, including scenic design and stage management, and courses chosen from theatrical construction, lighting design and electrics, digital media design, and costume design and construction. This program is geared towards creative and imaginative, open-minded individuals with a drive for excellence.

Students in this concentration explore creative concepts on a theoretical level in the classroom and studio, while reinforcing their training through practical application in main-stage productions of music, theatre, and dance. In addition to coursework, as they travel through the program, students take on roles as production technicians and assistants, stepping into leadership roles as designers or production stage managers. This fully collaborative and interdisciplinary program supports pre-professional development.

Design and Technology students have a multitude of facilities available for their use, including a design lab with 28 drafting and rendering stations, CAD Lab with 22 student workstations, scene shop, paint shop, costume shop, sound/video editing lab, lighting lab, and acting labs. Professional-quality venues include the University Theatre, the Studio Theatre, the University Dance Theatre, Organ Recital Hall, and Griffin Concert Hall.

**Major in Theatre, Performance Concentration**

Students entering the Performance Concentration will have the ability, aptitude, and stamina to pursue a program of study intended to provide rigorous training as a theatrical performing artist within the context of a liberal arts education. Either as an actor or a creative collaborator with strong interpersonal communication and group problem-solving skills, the concentration provides a path for success in the public and private sectors of the creative industries. This course of study provides student actors with a technical foundation and a variety of approaches to the acting process from which they may glean their own approach to character building.

The concentration emphasizes both theoretical and practical aspects of theatre, both as an art form and as a commercial industry, and focuses on developing well-rounded, responsible theatre artists who value ensemble and collaboration within an artistic community.

Major in Philosophy  

Major in Philosophy  

Philosophy is the oldest form of systematic, scholarly inquiry. It is the study of the most basic moral, legal, aesthetic, religious, and metaphysical ideas by which we quest for understanding and develop principles of conduct. Philosophers seek to establish standards of evidence, provide rational methods of conflict resolution, establish criteria for just social orders, and create techniques for evaluating ideas and arguments. 

The study of philosophy broadens and intensifies liberal education while enhancing interpretive abilities in many fields. The curriculum encourages a broad liberal arts background, including courses in foreign languages, and a plan for graduate school and teaching careers in philosophy. The broad relevance of philosophy to other fields permits most students to work toward goals such as professional training in law, medicine, business, or theology. There are three concentrations available to Philosophy majors: General Philosophy; Global Philosophies and Religions; and Philosophy, Science and Technology. It is not unusual for Philosophy majors to second-major in other disciplines, and these concentrations combine easily with other majors at CSU.
Student Learning Outcomes

Outcome 1: Critical Thinking
Students will recognize, construct, and evaluate arguments and alternative positions by correctly applying logical standards and methodology, demonstrating the ability to identify underlying assumptions, ambiguous or contested terms, and potential objections to a thesis.

Outcome 2: Content Knowledge
Students will demonstrate knowledge of major questions, arguments, problems, and figures from a variety of philosophical areas and traditions.

Outcome 3: Reading and Research
Students will develop the interpretive, analytical, and conceptual skills to read with understanding a variety of philosophical texts. Students will be able to assess the quality and relevance of a variety of sources (books, journal articles, etc.) and use these sources in their own research and writing.

Outcome 4: Communication
Students will clearly articulate ideas and arguments in writing and oral communication. Students will demonstrate competence in interpretive, analytical, and argumentative writing. They will effectively present their own ideas and research in oral communication and writing. Students will engage in open, thoughtful, and respectful dialogue.

Outcome 5: Values and Attitudes
Students will demonstrate cognitive flexibility by applying alternative possibilities and conceptual frameworks to their own and others' ideas and values. They will demonstrate intellectual curiosity in their pursuits of truth and meaning. They will engage in reflective inquiry and aim to achieve a greater understanding of their subject matter.

Potential Occupations
A major in Philosophy prepares students for a wide variety of professional aspirations, including graduate study in philosophy or other disciplines; training in law, computer technology, social work, health care, the ministry, business; and general intellectual flexibility in a changing world. The high level of skill that Philosophy majors acquire in communication, writing, and analytical and critical thinking enables them to secure jobs in a variety of private and public sector professions and to become leaders in their fields.

Depending on the major concentration that a student pursues, available career opportunities include, but are not limited to: public policy analyst, business manager, public administrator, computer programmer, intelligence officer, legislator, teacher, foreign diplomat, social worker, community developer, philanthropic organizer, physician, lawyer, researcher, writer, theologian, human resources manager, publisher, and ethics consultant, in a variety of fields, e.g., in medicine, business, law, public administration, non-profit administration, engineering, and the sciences.

## Minor in Philosophy

Philosophy is the study of the most basic moral, legal, aesthetic, religious, and metaphysical ideas by which we pursue understanding and development of principles of conduct. Philosophers seek to establish standards of evidence, provide rational methods of conflict resolution, establish criteria for just social orders, and create techniques for evaluating ideas and arguments. The minor in Philosophy is intended to broaden students' education and to complement and encourage critical and constructive reflection in other courses.

### Effective Spring 2017

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Political science is the study of politics and political action in society. It encompasses international agreements and organizations as well as the patterns of political action which both create and shape them. It encompasses citizen action and the institutions which produce public policy at the local, state, and national levels within the United States. It encompasses systems of voting, political parties, and courts, compared across national political systems. It encompasses the raising of normative questions about the nature and purposes of political life. The presence of politics is felt in all areas and sectors of society at all times. The dynamic and transformative effects of political action are seen virtually everywhere.

The department's curriculum is distributed across five subfields of the discipline: American politics, political theory, comparative politics, international relations, and public policy. Course work across the discipline's subfields is complemented by a required support option. Support options include a minor in another department; an interdisciplinary minor; the second language support option; the methods support option, or a second major.

### Learning Outcomes

Students majoring in Political Science shall demonstrate the following:

- Ability to reason through political claims and assertions by political actors
- Skill in recognizing and responding to diverse ideological perspectives
- Ability to locate political issues and controversies within their relevant institutional and historical contexts
- Familiarity with the institutional processes of politics in numerous global and domestic political arenas
- Confidence in expressing opinions and presenting analyses of political problems and their solutions

### Potential Occupations

The Major in Political Science, like all studies in the liberal arts, provides students with a broad academic background that is serviceable across a broad spectrum of employment in the public and private sectors. Political Science majors are trained to be independent and critical thinkers; to be discerning and active observers and listeners; to communicate persuasively; to constructively engage and solve intellectual and practical problems; to adapt and function effectively in a number of distinct occupational and institutional settings; to function comfortably in a multiethnic, multicultural, and globalizing society. The employment profiles of departmental alumni attest to the breadth of possibilities for today's graduates: public and non-profit organization managers, prosecutors, public policy analysts and consultants, federal law enforcement agents, legislators and legislative analysts, foreign service officers, private attorneys, demographers, criminal investigators, advertising specialists, urban/regional planners, environmental policy analysts, state budget analysts, public relations representatives, market researchers, elementary and high school teachers, international businessmen and businesswomen, lobbyists, novelists, construction industry managers, insurance agents and managers, financiers, and real estate brokers. Some graduates join professions following advanced study in law, international relations, area studies, public administration, public policy analysis, and business management.

### Concentrations

Students may complete the general Political Science major or select one of the following concentrations for a more specialized course of study.

- Environmental Politics and Policy Concentration
- Global Politics and Policy Concentration
- U.S. Government, Law, and Policy Concentration
For further information on declaring the Major in Political Science, please schedule an appointment with a College of Liberal Arts Academic Success Coordinator by calling 970-491-3117 or visit Clark C 207.

Major in Political Science, Environmental Politics and Policy Concentration

The Environmental Politics and Policy concentration is designed to help students develop the knowledge and skills to analyze the connections between politics and the natural world, and pursue careers in environmental politics and policy-making. Students will learn about how political forces contribute to environmental degradation, the process for developing environmental policies, strategies to assess the strengths and weaknesses of different policy approaches, and how political forces can be harnessed to develop effective responses to problems such as climate change, water and air pollution, food security, and energy provision. Students will explore these issues from both domestic and global perspectives. Environmental Politics and Policy students are strongly encouraged to complete an internship to gain practical experience working in the field.

Learning Outcomes

Students majoring in Political Science shall demonstrate the following:

- Ability to reason through political claims and assertions by political actors
- Skill in recognizing and responding to diverse ideological perspectives
- Ability to locate political issues and controversies within their relevant institutional and historical contexts
- Familiarity with the institutional processes of politics in numerous global and domestic political arenas
- Confidence in expressing opinions and presenting analyses of political problems and their solutions

Potential Occupations

Graduates may work as policy analysts, advocates, planners, educators or decision-makers in government agencies, non-profit organizations, businesses and consulting firms at the local, state, national and international levels.

For further information on declaring the Major in Political Science, Environmental Politics and Policy Concentration, please schedule an appointment with a College of Liberal Arts Academic Success Coordinator by calling 970-491-3117 or visit Clark C 207.

1. Select a minimum of 12 upper-division (300- to 400-level) credits to fulfill Tier Four. Sophomores may take only 300-level courses from this section. Students may substitute a maximum of 3 credits in one of two ways: 1. from non-POLS specified courses shown above in the program; 2. by petitioning the advisor to include a non-POLS upper-division course when at least fifty percent (50%) of the course material and grading are related to environmental politics and policy. A course syllabus will be required for this option.

2. Courses selected to fulfill Tier Three requirements may not also fulfill Tier Four requirements, and vice versa.

3. Sophomores may take only 300-level Tier Three courses.

4. Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

5. Students must complete one upper-division course in each of four of the five departmental subfields (American Politics, Political Theory, International Relations, Comparative Politics, and Public Policy and Administration) prior to taking POLS 492.

Major in Political Science, U.S. Government, Law, and Policy Concentration

The U.S. Government, Law, and Policy concentration is designed to prepare students to become future leaders in the public sector. The skills gained in this concentration help prepare students for a variety of careers. Resources for careers include the American Political Science Association (http://www.apsanet.org/careersinpoliticalscience) and the Network of Schools of Public Policy, Affairs, and Administration (https://www.naspaa.org). The courses in this concentration educate students about the political processes and the legal environment of all levels of American government, as well as the processes of policymaking and the administrative apparatus used to implement public policy. Students will also be exposed to a variety of substantive policy issues including urban policy, energy policy, and environmental policy in the United States. U.S. Government, Law, and Public Policy students are strongly encouraged to complete an internship in one of the many organizations in the broader community. Minor in Applied Environmental Policy Analysis

The minor in Applied Environmental Policy Analysis will provide students with a rigorous and in-depth study of the public sector environment, practice, and methods for analyzing and developing policy. Each course will also have the environment as a focus in the material, exams, and assignments. At the end of the minor, students will be able to recall and explain the basic rationales for public policies, apply rigorous research methods for evaluating policy, and integrate the elements of theory, methods, problem structuring, ethics, analysis and argumentation to generate reports useable in government and nonprofit management. The minor is appropriate for practicing professionals and current undergraduate students interested in expanding their applied evaluation skills and environmental policy expertise.

For further information on adding Applied Environmental Policy Analysis as a minor, please contact Kate Sherman at 970-491-5156 or visit Clark C346.
Requirements
Effective Spring 2014

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Students must complete each course in the minor with a grade of C or better.

Major in Sociology

Sociology is the study of social life, focusing on the mutual interaction between human groups and institutions. Human beings, through patterned social interactions, construct and reconstruct the social webs within which they live. The nature and type of social relationships are central to their lives. Sociologists study relationships within family units from the most primitive cultures to interactions of large, bureaucratic institutions in major industrialized nations. Social issues are studied in
a variety of ways: direct observation of groups; surveying or interviewing individuals; analyzing historical research; and a variety of other methods.

Sociology majors have many opportunities to pursue broad and diverse ranges of interest. Students gain a sense of social perspective, an understanding of human affairs, an ability to think critically and perform research, and a capacity to write well. The curriculum includes general courses in the arts and humanities and the social sciences along with sociology course work. A generous selection of electives allows students to major or minor in a complementary discipline. A Sociology major also may enroll in one of the interdisciplinary minors, such as Latin American and Caribbean Studies, Religious Studies, or Women's and Gender Studies.

Learning Outcomes

Students will:

• Analyze critically the major classical and contemporary theories from the 19th and 20th centuries. Students are expected to demonstrate how well these theories help us understand or explain current social phenomena both in the U.S. and abroad. Students will learn to apply a wide variety of theories, including European critical theory, functionalism, symbolic interactionism, and post-modern theory, in required empirical research.

• Analyze critically sociological phenomena by applying objective social research methodologies. Students will demonstrate a working knowledge of sociological theories and the application of these theories to real world social phenomena. Specifically, students will understand conceptual frameworks associated with:
  a. social structure (social stratification, ethnic structures, social institutions, small group dynamics, social demography, and social organizations);
  b. culture (socialization and the development of personalities, social norms, framing normative assumptions of societies and organizations); and
  c. social agency (the behavior of the individual, collective behavior such as with social movements, and the principles of social psychology).

• Analyze critically sociological phenomena by applying social statistical techniques and qualitative research methods. Students will demonstrate a strong working knowledge of statistical techniques, including:
  a. parametric statistics;
  b. non-parametric statistics;
  c. ordinary least squares statistical analysis;
  d. application of the SPSS statistical package;
  e. interview techniques;
  f. focus group interviews;
  g. qualitative data analysis techniques; and
  h. qualitative data management and presentation.

Potential Occupations

Careers are exceptionally varied. Participating in internships and cooperative education opportunities is highly recommended to enhance practical training and development. Sociology graduates apply their education to a large variety of occupations in the non-profit, private, and public sectors. Because Sociology graduates possess a number of transferable communication, analytical, and people skills, they find positions in government, industry, and academia. Many employers appreciate liberal arts majors for their multiple skills and their ability to adapt to a variety of tasks and work environments. Graduates who go on to advanced studies can pursue careers in sociology or attain advanced positions with the possibility of rising to top professional levels.

Depending on student interests, the electives taken, or the concentration selected, available career choices include, but are not limited to: business manager, personnel director, city manager, clinical social worker, college/university instructor, human relations director, demographer, government aide, labor relations specialist, market analyst, researcher, medical administrator, police officer, politician, probation/parole officer, program director/manager, public administrator, publishers, sociologist-specialist, consultant, criminologist, lawyer, librarian.

Concentrations

• Criminology and Criminal Justice Concentration
• Environmental Sociology Concentration
• General Sociology Concentration

Major in Sociology, Criminology and Criminal Justice Concentration

Sociology majors who opt for the Criminology and Criminal Justice concentration will supplement their general sociological training with course work focused on social aspects of crime and criminal justice. Students will find the concentration helpful in enhancing their ability to think critically about issues of crime and justice and in preparing for various careers associated with the criminal justice system.

Major in Sociology, Environmental Sociology Concentration

The Environmental Sociology concentration takes sociology’s long established disciplinary orientation to the world and applies it to the study of nature-society relations. Sociology is about people, institutions, and behaviors. It is about social interactions and social structures. The task of the sociologist, therefore, is to stand back from common sense views of the world and understand the structure and processes of a society as a whole, including global societies. Environmental sociology is about translating these tasks into analysis and action around environmental issues. Some of the pressing contemporary environmental issues to which environmental sociology can be applied are: transboundary pollution, climate change, biodiversity loss, and water and soil degradation. Students will find the concentration helpful in preparing them for a growing number of jobs that have a focus in environmentally related matters.

1. Select three credits of Quantitative Reasoning from category 1B of the All-University Core Curriculum (AUCC) except MATH 105.
2. Select any AUCC 3C, AUCC 3D, and AUCC 3E courses not counted elsewhere in the program and excluding all SOC subject code courses.
3. Select 12 credits from the Environmental Sociology electives list of eligible upper-division sociology courses. A total of 6 credits may come from outside sociology. See the department list for pre-approved courses. Students can also petition the department for program credit when >25% of course material and grading are related to environment and society.
4. Select STAT 201 General Statistics or any statistics course 200-level and above.
5. Select enough elective credits to bring program total to minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

Major Completion Map

Each course used to satisfy requirements of the concentration requires a minimum grade of C (2.000), i.e. all SOC courses, STAT 2**, and each course taken to satisfy the Social and Behavioral Sciences electives or the Environmental Sociology electives.

**Major in Sociology, General Sociology Concentration**

The General Sociology concentration is designed to provide students with a broad liberal arts education and a greater understanding and insight into the social systems and processes that bear upon everyday lives. Students will find the concentration helpful in enhancing their ability to grasp the complexities of the world so as to prepare them for a variety of jobs upon graduation. Opportunities for students with bachelor’s degrees in Sociology are quite varied. Some go on to work for human service agencies; others work in the fields of criminal justice and urban planning; others enter graduate programs in sociology, education, law, medicine, or social work.

**Requirements**

**Effective Fall 2019**

Each course used to satisfy requirements of the concentration requires a minimum grade of C (2.000), i.e. all SOC courses, STAT 2**, and each course taken to satisfy the Social and Behavioral Sciences electives.

### Minor in Criminology and Criminal Justice

The Department of Sociology offers a minor in Criminology and Criminal Justice for students from other departments who wish to have some experience in an area outside their majors. Minors require fewer credit hours to complete than majors. Through this minor, students will gain sociological understanding of a variety of issues related to crime, deviance, and criminal justice. This course work will help prepare students who wish to work in a variety of fields, including those related to the criminal justice system.
Requirements
Effective Fall 2019

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Students must receive a grade of C or higher for each course counting toward the minor.

**College-Wide Graduate Programs**

**Graduate Certificate**
Certificate in Sustainable Military Lands Management

The College offers studies and professional training in the management, administration, and scientific investigation of renewable and nonrenewable natural resources. Programs include the study of every component of natural systems with particular emphasis on fish, forests, minerals, range, watershed, wildlife, and outdoor recreation areas. Graduate areas of emphasis also include ecosystems and greenhouse gas management.

The Natural Resource Ecology Laboratory, housed in the College, is devoted to research and training in ecosystem science and management.

The College also houses the Center for Environmental Management of Military Lands, CEMML, (http://www.cemml.colostate.edu) which is a team of environmental professionals experienced in the conservation and sustainable management of natural and cultural resources on Department of Defense lands.

**College Programs**

**Undergraduate Majors**
The scope of the College's programs is more broadly based than most natural resources schools. There are ten undergraduate degree programs, most with specialized concentrations or designated areas of further study. Undergraduate majors in all five departments lead to the Bachelor of Science degree, which requires a minimum of 120 credits. A minimum of 42 credits in upper division courses is required for all majors.

**Field Training Programs**
Most undergraduate majors require the completion of a four or five-week summer field training program (five or six credits) before their junior or senior year. Summer field instruction is given at the CSU Mountain Campus (http://mountaincampus.colostate.edu) campus, 55 miles west of Fort Collins, and the geosciences department offers a summer field course in northern New Mexico and southern Colorado.

During interim or summer periods, some majors devote several weeks to advanced field training programs off campus. Students taking advanced ROTC should arrange their schedules with their advisors in their junior year to avoid conflicts during senior spring semester. It is recommended for all majors, and required for some, that students have a minimum of one summer of field experience before graduation.

**International Education**
International resources management is an increasingly important concern of the Warner College of Natural Resources. It is desirable that students in the College have opportunities to study abroad, just as students from abroad are encouraged to study here. CSU has agreements covering study abroad opportunities with institutions throughout the world. Students may complete one or two semesters of resources management education abroad. Students interested in studying abroad should plan far in advance by discussing opportunities with their academic advisor and by visiting the Office of International Programs (http://international.colostate.edu) in Laurel Hall.

**Graduate Programs**
Master of Science and Doctor of Philosophy degree programs are offered in each department. Four professional master's degrees are offered by departments in the college: the Master of Fish, Wildlife, and Conservation Biology, the Master of Greenhouse Gas Management and Accounting, the Master of Natural Resources Stewardship, and the Master of Tourism Management. Descriptions of the various graduate programs may be found in the Graduate and Professional Bulletin or on the departmental websites.

**Admissions Information**

**For High School Graduates**
High school students are advised to take all the English, science, and mathematics courses possible to prepare for college-level work in natural resources.

**Limitation on Transfer of Credits**
Students planning to attend another college or community college prior to enrolling at CSU should follow the freshman program for their chosen major as closely as possible. To assure that they have the opportunity to complete all degree requirements in four years, they should plan to transfer to CSU no later than the beginning of their junior year. Credits which transfer but are not equivalent to specific curriculum requirements may be used as elective credits.

**Transfer Students**
Students are required to choose a major when enrolling. Transfer students, therefore, should follow the departmental curriculum closely. Check the individual major and concentration for specific courses.
Graduate Certificate in Sustainable Military Lands Management

The Graduate Certificate in Sustainable Military Lands Management at CSU is designed to enhance the knowledge and skills of current practitioners and managers, as well as new professionals interested in applying their education and background to the management of military lands. This knowledge and skill sets are transferable to professionals in a wide array of federal and state land management agencies. This online program is the first and only program of its kind in the U.S.

Major in Ecosystem Science and Sustainability

The major in Ecosystem Science and Sustainability provides a strong scientific foundation in ecosystem ecology integrated with a broad knowledge of the cultural, social, economic, and political issues that are shaping the issue of sustainability. Students in the major learn to integrate science into real-world decision making, with the goal of developing sustainable strategies to maintain ecosystem services around the globe. We provide students with a broad base of experiential and collaborative learning opportunities, opportunities for research through our affiliation with the Natural Resource Ecology Laboratory, and the latest scientific knowledge about sustainability science and how organisms interact with their environments to form complex ecosystems. Opportunities to join in research, internships, practical and group-based learning, and field experiences in the beautiful Rocky Mountains and beyond combine with an outstanding classroom education to build a solid foundation for applying sustainable resource management principles.

Learning Outcomes

Students in the major learn:

- How to help people use natural resources in a sustainable way.
- About environmental change at local to global scales.
- The amazing connections between different earth system components.
• How to conduct research or field work in a variety of settings addressing questions important to sustainability.

Potential Occupations

Completion of the undergraduate degree qualifies students for a wide variety of careers related to sustainability and natural resource science. Examples of possible careers include: sustainability coordinator, ecologist, environmental educator, invasive species specialist, biological science technician, climate change scientist, natural resource specialist, or corporate environmental consultant. Students completing the undergraduate degree in Ecosystem Science and Sustainability will also be well prepared to succeed in graduate education in a variety of disciplines.

Major in Watershed Science

Why Watershed Science at CSU?

Sustainable management of freshwater resources is an increasingly important and complex challenge in Colorado and worldwide, and we need scientists who can address complex water issues. The Watershed Science program focuses on how water moves through the landscape, what factors affect its quality, and how to manage water resources. Students begin their program by building a strong foundation in the physical and natural sciences in preparation for upper-division coursework in land-use hydrology, snow hydrology, water quality, and watershed problem analysis. Students gain hands-on experience with water measurements outside and in the lab, and build technical and writing skills to prepare them for careers in hydrology and water resources.

Learning Outcomes

Students will demonstrate:

- An understanding of the key concepts in watershed science including surface and subsurface hydrology and water quality.
- An understanding of land use effects on fresh water resources.
- Field and lab-based watershed measurement and data analysis skills.
- Skills in watershed problem analysis, including the use of GIS and watershed models.
- Strong critical thinking, writing, and oral communication skills.
Potential Occupations

The B.S. in Watershed Science qualifies students for a wide variety of careers in hydrology and water resources management. Examples include: watershed scientist, hydrologist, water quality analyst, watershed manager, environmental consultant, watershed use specialist, and water conservation specialist. Employment opportunities for graduates are found in consulting firms, governmental agencies, international development and resource management agencies, non-governmental organizations, and private industry. Graduates are also well positioned for advanced science degrees. The B.S. curriculum includes all of the requirements for graduates to meet the U.S. governmental hydrologist certification.

Graduate Certificate in Water Resources

Advance your career in water resources planning, management, and policy with this graduate certificate addressing an array of water issues in the western United States and around the world. Expand your knowledge with case studies, geospatial applications and exercises. The program of study emphasizes an understanding of the hydrologic cycle and the physical processes that drive it, how humans adapt water resources to their needs, techniques for sustainable management, the evolution of laws and policies governing water use, and basic spatial and temporal analysis of water data.

After completion of this water resources training program, apply your knowledge to a career in the public or private sector. Career opportunities may be found in forests, parks, wildlife refuges, public lands, special-purpose water districts, academia, water resources engineering and consulting firms, nonprofit organizations, and municipal, tribal, county, state, or federal agencies.

Curriculum: Three courses total, offered through the Department of Ecosystems Science and Sustainability and CSU Online, and geared towards professionals across disciplines. Courses can be taken in any order.

Master of Greenhouse Gas Management and Accounting, Plan C (M.G.M.A)

Training in accurate quantification of greenhouse gas mitigation efforts is central to deployment of cleaner technologies and practices across all sectors of the economy. Every nation in the world has recognized the importance of limiting greenhouse gas emissions and agreed that emissions must be reduced. This goal cannot be achieved without a new class of technically adept professionals. CSU’s Master of Greenhouse Gas Management and Accounting (MGMA) program provides students with knowledge, skills, and experience necessary to launch successful careers and tackle these challenges. The program leverages world-leading greenhouse gas and climate change expertise from across CSU and enables students from a wide variety of academic backgrounds, such as environmental studies, business, engineering, natural resources or agriculture, to develop the skills needed for emerging professions in greenhouse gas management and accounting.

The Master of Greenhouse Gas Management and Accounting is an affiliated Professional Science Master’s (PSM) degree. Affiliation is administered by the Commission on Affiliation of PSM Programs (https://www.professionalsciencemasters.org) (formerly named PSM National Office) to ensure a strong and distinctive PSM brand. PSMs are designed for students who are seeking a graduate degree in science or mathematics and understand the need for developing workplace skills valued by top employers. The degree program also participates in the Western Regional Graduate Program (http://graduateschool.colostate.edu/for-faculty-and-staff/admissions-resources/wiche-process).

Program Total Credits: 37

A minimum of 37 credits are required to complete this program.

1. Select courses with approval of advisor and graduate committee.
2. Select two courses in ANEQ, F, RS, SOCR, or other area of specialization with approval of advisor and graduate committee.
3. Select two courses from GIS and/or remote sensing with approval of advisor and graduate committee.

Master of Science in Ecosystem Sustainability, Plan A

Many physical, ecological and social factors interact to shape the future of our ecosystems and societies. CSU’s innovative Master of Science in Ecosystem Sustainability enables students to develop core competencies in ecosystem science—the study of organisms and the environment—and apply that knowledge to address real-world issues. We help develop leaders in sustainability science: a new generation of practitioners able to address complex, integrated social-ecological problems, in collaborative partnerships with researchers, resource users and decision-makers.
Our graduates have the tools to understand complex scientific questions in sustainability, and the leadership and collaborative skills required to address current and future issues in sustainability. The program serves as a foundation for a wide range of careers, including academic and scholarly professions, and work in government agencies, non-governmental organizations, and corporate and entrepreneurial environments.

A focus on solutions

Students will work at the cutting edge of new research on ecosystem sustainability. Collaborating with some of the world’s leading ecosystem and sustainability scientists, students will explore solutions to global problems related to natural and water resources, food supplies, energy, greenhouse gas management, land use change, climate change, and environmental justice, among others.

What students can expect to gain

In the course of the degree, students will acquire:

- Detailed knowledge of quantitative and qualitative methods
- An understanding of complex ecosystem functioning
- A transdisciplinary understanding of social-ecological processes
- The ability to work in teams across disciplines and with decision makers, resource users and team members outside of academia
- The skills to conduct integrated assessments using systems approaches, conceptual, mathematical, geospatial, and statistical models, and innovative collaborative processes
- The ability to apply critical thinking in the development of sustainable systems at local and global scales
- Advanced training in the methods of urban ecology, and on managing the sustainable cities of the future

Local and Global Relevance

Our graduate community benefits from a highly networked program with close working links to the city governments of Fort Collins, Boulder, and Denver, and to local agencies, farming communities, and nonprofits across the Front Range. We work at the highest elevations of the Rockies, and in the lowest short grass steppe regions, on cities and in neighborhoods. Our active research programs are spread around the globe: from northern, eastern, and southern Africa to China, Mongolia, Nepal, Tibet, Honduras, and Mexico.

Program Total Credits: 30

A minimum of 30 credits are required to complete this program.

**Master of Science in Watershed Science, Plan A**

Sustainable management of freshwater resources is an increasingly important and complex challenge in Colorado and worldwide, and we need scientists who can address complex water issues. The watershed science programs focus on how water moves through the landscape, what factors affect its quality, and how to manage water resources. Students in the M.S. in Watershed Science, Plan A program work closely with research scientists in the classroom, laboratory, and field on both basic and applied watershed science research. Students are exposed to cutting-edge field, data analysis, and modeling techniques through flexible programs of study and access to a breadth of water-related courses throughout the university. Students also have opportunities to participate in seminars, field courses, and practical internships.
The program emphasizes the advisor/student relationship. There is no core curriculum; rather, the advisor and student develop a program of study that best meets the requirements of the research to be undertaken and the needs of the student, culminating in the completion of a master’s thesis.

The program has a strong record of employment and acceptance to leading doctoral programs after graduation, with graduates holding positions in federal, state, and local natural resource agencies, consulting firms, non-governmental organizations, industry, teaching, and research. Most students complete coursework that enables them to meet the U.S. governmental hydrologist certification.

**Requirements**

Program requirements are:

- 30 credits that meet graduate school requirements.
- Thesis
- Selected courses approved by advisor and committee -- Prefixes that can be used to meet course requirements: ANTH, AREC, ATS, BZ, CHEM, CIS, CIVE, ECOL, ECON, ENVE, ESS, FW, F, GR, GEOL, GRAD, HORT, MATH, NR, NRRT, RS, SOC, SOCR, STAA, STAT, WR.

**Ph.D. in Ecosystem Sustainability**

Many physical, ecological and social factors interact to shape the future of our ecosystems and societies. CSU’s innovative Ph.D. in Ecosystem Sustainability enables students to develop core competencies in ecosystem science—the study of organisms and the environment—and apply that knowledge to address real-world issues. We help develop leaders in sustainability science: a new generation of practitioners able to address complex, integrated social-ecological problems, in collaborative partnerships with researchers, resource users and decision-makers.

Our graduates have the tools to understand complex scientific questions in sustainability, and the leadership and collaborative skills required to address current and future issues in sustainability. The program serves as a foundation for a wide range of careers, including academic and scholarly professions, and work in government agencies, non-governmental organizations, and corporate and entrepreneurial environments.

**A focus on solutions**

Students will work at the cutting edge of new research on ecosystem sustainability. Collaborating with some of the world’s leading ecosystem and sustainability scientists, students will explore solutions to global problems related to natural and water resources, food supplies, energy, greenhouse gas management, land use change, climate change, and environmental justice, among others.

**What students can expect to gain**

In the course of the degree, students will acquire:

- Detailed knowledge of quantitative and qualitative methods
- An understanding of complex ecosystem functioning
- A transdisciplinary understanding of social-ecological processes
- The ability to work in teams across disciplines and with decision makers, resource users and team members outside of academia
- The skills to conduct integrated assessments using systems approaches, conceptual, mathematical, geospatial, and statistical models, and innovative collaborative processes
- The ability to apply critical thinking in the development of sustainable systems at local and global scales
- Advanced training in the methods of urban ecology, and on managing the sustainable cities of the future

**Local and Global Relevance**

Our graduate community benefits from a highly networked program with close working links to the city governments of Fort Collins, Boulder, and Denver, and to local agencies, farming communities, and non-profits across the Front Range. We work at the highest elevations of the Rockies, and in the lowest short grass steppe regions, on cities and in neighborhoods. Our active research programs are spread around the globe: from northern, eastern, and southern Africa to China, Mongolia, Nepal, Tibet, Honduras, and Mexico.

Major in Fish, Wildlife, and Conservation Biology

Professor Will Clements
Chair of the Undergraduate Major

The Fish, Wildlife, and Conservation Biology major is intended for students interested in understanding wildlife and the habitats in which they live. We offer three concentrations: Conservation Biology, Fisheries and Aquatic Sciences, and Wildlife Biology. The curriculum has a strong foundation in the biological, physical, and social sciences with the focus on solving current and future issues related to conservation and sustainability of wild animals and their habitats. The faculty offers a wide range of expertise with a keen interest in innovative teaching and research methods. Our program prepares students for professional careers involving fish, wildlife, and conservation that exist in courses and study abroad programs.

Numerous opportunities exist for students to gain experience through research and internships, including professional and career mentoring and involvement with professional societies to further their studies, practical experience, and career potential. Required natural science courses include general biology, vertebrate biology, botany, calculus, and statistics, while required courses in the major focus on wildlife ecology and conservation, principles of wildlife management, design of wildlife projects, conservation biology, fishery science, and wildlife data collection and analysis. Required courses in the concentrations as well as elective courses explore specific areas of fish, wildlife, and conservation biology. A summer field course at CSU’s mountain campus is required and provides students with hands-on learning about natural resource ecology and measurements. Additional hands-on opportunities exist in courses and study abroad programs. Along with a strong science foundation, problem solving, communication skills and outreach, are important to resolve difficult issues faced by today’s natural resource professionals.
Learning Outcomes

Students will:

• Demonstrate a mastery of ecological concepts and fundamental principles and techniques to manage and conserve fish and wildlife populations, and how they apply to current natural resource management issues
• Demonstrate mathematical, statistical, and study design knowledge and skills required for careers in fishery, wildlife, and conservation biology
• Become effective in oral and written communication about issues related to the environment and natural resources, including as members of multi-disciplinary teams
• Learn approaches to solving complex natural resource management issues, including planning, organizing, creating, and presenting group projects

Potential Occupations

Federal and state agencies that manage natural resources offer most employment opportunities in fish, wildlife, and conservation biology. Key federal agencies include the U.S. Forest Service, Fish and Wildlife Service, Bureau of Land Management, Geological Survey, National Park Service, Environmental Protection Agency, Bureau of Reclamation, National Marine Fisheries Service, and state departments of wildlife and natural resources. Non-governmental organizations, e.g., The Nature Conservancy, private companies, and environmental consultants also offer excellent opportunities. Participation in internships, independent study/research, volunteer activities, or cooperative education opportunities is highly recommended to enhance practical training and development. Undergraduates who go on for graduate-level studies can attain more advanced positions with the possibility of rising to top professional levels, e.g., researchers and teachers in academic institutions and scientists at natural resource agencies. Our degree is also excellent preparation for veterinary school.

Examples of career opportunities include, but are not limited to: fishery/wildlife/conservation biologist, ecologist, wildlife refuge or natural resource manager, environmental consultant, research scientist, and educator. Within these areas, a variety of specializations are possible including fish, wildlife, and conservation education and interpretation; endangered species; habitat enhancement and restoration; administration; research; law enforcement, fish and wildlife population assessment, statistical analyst, and human-wildlife conflicts.

Concentrations

• Conservation Biology Concentration
• Fisheries and Aquatic Sciences Concentration
• Wildlife Biology Concentration

Major in Fish, Wildlife, and Conservation Biology, Conservation Biology Concentration

The Conservation Biology concentration focuses on understanding the ecological processes necessary to conserve biological diversity, with an emphasis on fish and wildlife species and their habitats.

Requirements

Effective Fall 2019

A minimum grade of C (2.000) is required in all biological, mathematical/statistical, physical science, fish, wildlife, and conservation biology and natural resource courses used to meet graduation requirements for the fish, wildlife, and conservation biology major. The minimum applies to courses taken as substitutions for meeting these requirements.

**Major in Fish, Wildlife, and Conservation Biology, Fisheries and Aquatic Sciences Concentration**

The Fisheries and Aquatic Sciences concentration allows students to focus on a strong background in basic fishery ecology, management, and conservation, which includes an understanding of the linkages between land and water.

Students choosing the Fisheries and Aquatic Sciences concentration are also required to complete at least 160 hours of paid or non-paid employment related to fishery and aquatic biology.
# Requirements

## Effective Fall 2019

A minimum grade of C (2.000) is required in all biological, mathematical/statistical, physical science, fish, wildlife, and conservation biology, and natural resource courses used to meet graduation requirements for the fish, wildlife, and conservation biology major. The minimum applies to courses taken as substitutions for meeting these requirements. Students choosing the Fisheries and Aquatic Sciences concentration are also required to complete at least 80 clock hours in an internship experience related to fishery and aquatic biology.

Major in Fish, Wildlife, and Conservation Biology, Wildlife Biology Concentration

The Wildlife Biology concentration focuses primarily on terrestrial vertebrates and their habitats, and builds a strong foundation in basic wildlife ecology, management, and conservation.

Requirements

Effective Fall 2019

A minimum grade of C (2.000) is required in all biological, mathematical/statistical, physical science, fish, wildlife and conservation biology, and natural resource courses used to meet graduation requirements for the Fish, Wildlife, and Conservation Biology major. The minimum applies to courses taken as substitutions for meeting these requirements.

Guided Electives

Elective

Total Credits

Program Total Credits:

1. Students taking this biology selection should choose a botany-related course in the department elective options to meet botany/plant course requirements for certain federal positions related to wildlife, fisheries, and/or conservation biology.
2. Students in the Honors Track 1 program must take HONR 499.
3. FW 300 and FW 301 count together as one selection in this choice.
4. Students will need to obtain a registration override from the appropriate department to take this course.
5. Restricted to FW subject code, department travel abroad courses, taught by FWCB faculty. No transfer or substitute courses will be accepted.
6. Guided Electives are courses intended to expand a student's depth and breadth in wildlife biology and include any 300- or 400-level regular course with a BC, BMS, BSPM, BZ, CHEM, ESS, F, FW, GES, MATH, MIP, NR, NRRT, PH, RS, SOCR, STAT, or WR subject code (excluding courses ending in -80 to -99); SOCR 240; other courses with prior approval by department and advisor. Courses may not double-count as Guided Electives and for other requirements in the major.
7. Select enough elective credits to bring program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

Major Completion Map

Distinctive Requirements for Degree Program: The curriculum for the Fish, Wildlife and Conservation Biology major – Wildlife Biology concentration assumes students enter college prepared to take calculus. Students who have not met the prerequisites for calculus, will be required to successfully complete the prerequisites in their first year. A minimum grade of C (2.000) is required in all biological, mathematical/statistical, physical science, fish, wildlife, and conservation biology, and natural resource courses used to meet graduation requirements for the fish, wildlife, and conservation biology major. The minimum applies to courses taken as substitutions for meeting degree requirements. NR 220 is a summer course in which students reside at CSU's Mountain Campus. Students must choose ONE of two CHEM + PH paths: (Path A) CHEM 107/108 and PH 121/122 or (Path B) CHEM 111, CHEM 112, CHEM 113, CHEM 114 and PH 110/111. Students must also choose ONE biology group A) BZ 110/BZ 111/BZ 120 or B) LIFE 102/LIFE 103.

Major in Fire and Emergency Services Administration

The fire and emergency services have a long and proud history of serving their communities with a wide variety of fire protection, prevention, emergency medical, and public education services. The fire and emergency services administrators of the future need advanced administration, management, and leadership skills to address the ever-
The major prepares students for managerial and officer positions in emergency and fire service organizations.

The major is a degree completion program for students to gain advanced knowledge of emergency service related subjects. The coursework builds upon technical skills and experiences earned in First Responder associate degree programs and on-the-job training. Students will explore key administrative and management areas such as emergency operations, public service budgeting, human resources, prevention, and incident command. The major is focused on the administration and management of First Responder organizations.

All fire and emergency services administration courses are upper-division and offered online via distance education only through the Division of Continuing Education/CSU Online (http://www.online.colostate.edu).

Learning Outcomes
Students will demonstrate their ability to:

- Effectively integrate academic knowledge into fire and emergency services administrative and managerial roles within current and future employment situations.
- Collaborate with peers to solve fire and emergency services organizational problems. Effective collaboration includes the ability to organize and synthesize ideas, develop a persuasive argument, interact with individuals and groups, and use applicable presentation aids.
- Apply their knowledge, skills, and competencies in the fire and emergency services field to fire and emergency services organizations. Examples include knowledge of proposal and report writing, trends in emergency management and incident command systems, and comprehension of public service administration practices.
- Interact with professional First Responders nationally and internationally.

Potential Occupations
Students in the Fire and Emergency Services Administration major should have work experience in the fire and emergency services field. Typical students are employed as career or volunteer firefighters, wildland firefighters, paramedics, emergency medical technicians, inspectors, or trainers. Graduates can expect positions as fire chiefs, company officers, public administrators, fire marshals, or educators.

Major in Forest and Rangeland Stewardship

Forests and rangelands are always changing, sometimes very slowly as a result of long-term processes, followed by rapid changes as a result of fires, timber harvesting, or grazing. Rangelands occupy nearly fifty percent of the earth’s land surface and consist of natural grasslands, savannas, shrublands, riparian areas, deserts, tundra, and coastal marshes. Sustaining forests and rangelands in the modern world requires managers who understand ecosystem changes, and how forests and rangelands connect to global, ecological, and social systems.

State and federal land management agencies, private landowners, consultants, and conservation organizations employ graduates of the Forest and Rangeland Stewardship (FRS) major. The curriculum includes a balanced mix of courses in plant and animal biology, integrated resource management, and the physical sciences. Colorado is an ideal setting for the study of forestry and rangeland ecology and management with shortgrass steppe to the east and high elevation grasslands, forests, woodlands, and riparian areas to the west. Students learn about ecosystem productivity, policy, conservation, and the latest in computer-based management tools. Students also gain an understanding of economics related to recognizing alternatives and analytical and decision-making skills, as well as developing communication, political and interpersonal skills to make their education effective, and contribute to their respective fields fully upon graduation.

The forestry-specific concentrations within the FRS major are accredited by the Society of American Foresters, with curricula meeting the Office of Personnel Management (OPM) requirements for the forestry series (0460) and the forestry technician series (0462). The range-specific concentrations in the FRS major are accredited by the Society for Range Management and students generally meet the OPM requirements for the Rangeland Management Series (0454) and Soil Conservation Series (0457).

Students in the FRS major will gain an understanding of and learn how to manage the animal, soil, and vegetation resources on rangelands or in forests for state and federal land management agencies as well as a variety of private landowners and non-governmental agencies. With a few additional courses, graduates meet OPM requirements for the Ecology Series (0408). Students develop an in-depth understanding of basic plant and animal biology; a basic understanding of the physical sciences as they relate to rangeland ecology; and knowledge of important concepts of ecology and range management.

The FRS major includes summer field courses. All FRS students take a 4-week summer field course at the CSU Mountain Campus for field studies in forest and rangeland ecology and management, wildlife, watershed and human dimensions of natural resources. Students in the forestry concentrations take another 2-week summer field course at the Mountain Campus that focuses on forestry field measurements. Students in the rangeland concentrations take a 1-week summer field course focused on rangeland inventory and assessment that is normally held in shortgrass steppe or foothills rangelands close to Fort Collins.

Careers in forestry and natural resources are exceptionally varied, challenging, and personally satisfying. Opportunities are available in rural and urban settings worldwide. Positions are available in industry, education, consulting, public service, and government agencies. Some examples of career opportunities include, but are not limited to: forest manager, forest/park ranger, environmental policy and conservation consultant, fire fighter/manager, natural resource journalist, naturalist, land use planner, geospatial information systems specialist, forest products business person, researcher/professor.

Examples of career opportunities in range management include, but are not limited to restoration ecologist, rangeland scientist, rangeland management specialist, soil conservationist, soil scientist, rangeland conservationist, plant ecologist, riparian ecologist, ranch manager, researcher, commercial sales and service representative, consultants, mine rehabilitation specialist, real estate/land manager, and international rangeland specialist.

Major in Forest and Rangeland Stewardship, Forest Biology Concentration

The Forest Biology concentration in the Forest and Rangeland Stewardship major provides forestry education that spans the entire range of experiences necessary to understand and manage forests. Curricula include a background in the biological, physical, social, and management sciences, followed by professional forestry courses. The curriculum also focuses on forest biology, forest ecology, natural resource management, and the physical sciences. More specifically,
this concentration is intended for students interested in forest ecology and tree biology and it prepares students for graduate studies in forest biological sciences and eventual careers in teaching or research.

Major in Forest and Rangeland Stewardship, Forest Fire Science Concentration

The Forest Fire Science concentration in the Forest and Rangeland Stewardship major provides forestry education that spans the entire range of experiences necessary to understand and manage forests. Curricula include a background in the biological, physical, social, and management sciences, followed by professional forestry courses. More specifically, this concentration is the study of fire as an ecological process and its application as a forest management tool. Students learn how to control wildfires and how prescribed fires can enhance habitat, prepare seedbeds, control forest insects and disease, and reduce fuel hazards.

### Notes

- Course codes follow the format of major codes and course numbers, e.g., BZ 120 for Principles of Plant Biology.
- Credits are listed next to each course, indicating the total credit hours for each course.
- AUCC codes are provided for each course, which stand for American University Core Curriculum.
- Each year level is assigned a section: Freshman, Sophomore, Junior, Senior.
- The total credits for each section are also listed at the bottom of each section.

### Major in Natural Resources Management

The goal of the Natural Resources Management major is to provide students with a broad-based understanding of the interconnectedness of social, political, and ecological systems. This knowledge will enable students to design sustainable solutions to address natural resource conservation and management problems. Students will learn about natural resource stewardship in both theory and practice, with an eye toward designing systems that are adaptable and resilient in light of the social and ecological complexity and change that characterize today's challenges. Using an integrative approach, students will learn how to develop local solutions that are sustainable and ethical at larger, global scales. Environmental issues such as land-use change and planning, conservation biology, energy use, climate change, renewable resource management, and citizen engagement in place-based conservation will be addressed. Field measurements and field skills are important components of this major, and students are required to attend a four-week summer field course in ecological investigations and resource management.

Specific objectives are to provide each student with:

1. a science-based core curriculum in biological, physical, and social sciences;
2. a broad foundation in natural resources science and environmental management; and
3. specialization in a subject relevant to natural resources management.

The breadth of the major allows students to specialize in a wide range of topics, including conservation biology, geographic information systems, forest management, rangeland ecology, restoration ecology, natural resource policy, recreation resources, watershed management, wildlife management, or other topics related to natural resources management. This specialization is accomplished by coupling the major with a required minor, typically declared by a student's junior year.

Students are encouraged to participate in internships and obtain related work experience. Participating in seasonal and voluntary work, internships, and cooperative education opportunities will enhance your chances for permanent full-time employment. The department offers numerous opportunities to become engaged in these kinds of endeavors. At the completion of the program, students should have the technical and communication skills that are critical to resolving important natural resource management problems.

### Learning Outcomes

Students will:

- Demonstrate knowledge of a wide range of natural resource topics spanning ecological, social and physical aspects of wildland ecosystems.
- Demonstrate proficiency in an area of specialization through completion of a minor in an area complementary to natural resource management. Some minors that students find well-suited to develop a proficiency are Global Environmental Sustainability, Forestry, Rangeland Ecology, Ecological Restoration, Watershed Science, Conservation Biology, or Environmental Affairs, though there are many additional options.
- Be able to apply their broad natural resources knowledge to create sustainable solutions at local, national, and global scales.
- Accurately communicate their knowledge of natural resources, both verbally and in written form.

### Potential Occupations

Opportunities are available with a wide array of local, national, and international organizations and institutions involved in natural resource management. Graduates apply their education in science, technology, social science, and policy to solving today's critical natural resource and environmental problems. Positions are found with federal, state, and local government agencies, industry, and education and advocacy organizations. Some natural resource professionals are employed in environmental consulting firms and corporate environmental departments. The nonprofit sector provides a variety of environmentally-related jobs, ranging from science application to policy development, education, and collaborative conservation.

Examples of available career choices include, but are not limited to: natural resource manager; professional forester; land use planner; geographic information system (GIS) or remote sensing specialist; fishery/wildlife manager; environmental policy analyst; environmental advocate; environmental consultant; resources/environmental lawyer (with continued education); youth agency administrator; natural resource communications specialist; law enforcement officer; natural resources/ environmental educator; restoration specialist; multiple resource use planner; regulatory compliance enforcement officer.

Major in Restoration Ecology

The Major in Restoration Ecology emphasizes interdisciplinary study, research, and restoration of damaged, degraded or destroyed rangelands and forested ecosystems of the world. More specifically, this major focuses on the restoration of rangelands and forests for multiple uses. These uses include both consumptive and non-consumptive activities such as recreation, preservation of wildlife habitat, providing for aesthetic
beauty, livestock grazing, and timber production. Forests and rangelands occupy the vast majority of the earth’s land surface and Colorado is an ideal setting for the study of restoration ecology with many different types of rangeland and forest ecosystems in close proximity.

Students in this program will gain the important knowledge and skills necessary to restore damaged ecosystems. They will learn how to manipulate soil, water, vegetation and animal resources in order to implement successful restoration for local, state and federal land management agencies as well as for a variety of private entities, landowners and non-governmental agencies. Students develop an in-depth understanding of basic plant and animal biology; a basic understanding of the physical sciences as they relate to restoration ecology; knowledge of important concepts of ecology and natural resources management; an understanding of economics related to evaluating alternatives; and analytical and decision-making skills. Students also develop communication, political and interpersonal skills to make their education effective. Examples of career opportunities include, but are not limited to restoration ecologist, soil conservationist, plant ecologist, riparian ecologist, researcher, commercial sales and service representative, consultants, and mine reclamation specialist.

## Minor in Ecological Restoration

The minor in Ecological Restoration allows students in related majors to gain knowledge of the science and art of restoring ecosystems. This background is especially valuable to students who will be working in the various natural resource management fields. Since the prevalence of damaged, degraded or destroyed ecosystems is likely to increase in the future, restoration will be imperative for transforming these lands to once again provide ecosystem services.

Students are required to take NR 479: Restoration Case Studies, which includes a required field trip one week prior to the first day of the fall semester.

To get more information about this minor or to officially declare it, please visit warnercnr.colostate.edu/frs/undergraduate-program/advising/ to make an appointment with an advisor.

### Requirements

**Effective Spring 2013**

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Major in Geology

The Major in Geology provides a rigorous academic and practical basis for diverse professional geosciences careers that include private and public sector water, energy, mineral and other natural resources, geologic hazards, resources and environmental management, and education. The major also provides a solid science and general education background for subsequent graduate training in specialized fields, including hydrology, geophysics, environmental geology, economic geology, resources management, public policy, and many other areas.

The Geology curriculum encompasses a strong geosciences education within the broader framework of a liberal education. Emphasis is placed on integrating field studies in the Colorado Rocky Mountains and elsewhere with on-campus classroom and laboratory work. In addition to obtaining a solid core in geosciences, students complete substantial course work in math, physical sciences, communications, and the liberal arts that lead to effective quantitative, decision making, and communications skills. Four concentrations are offered to address specialized career interests: Geology, Environmental Geology, Geophysics, and Hydrogeology.

Learning Outcomes

Students will demonstrate:

- A solid foundation in the physical sciences and broad understanding of geological processes
- Application of field and classroom scientific reasoning skills to data analysis and problem solving in the geosciences, both individually and in teams
- An awareness of sociopolitical, economic factors, and ethical practices and standards that apply to careers in geosciences

Potential Occupations

Many opportunities exist for geology graduates in the private and public sectors in a wide range of societally important and satisfying careers. Energy resources, water resource and management, industry service, mining, power generation, computer software, and many other companies employ geoscientists in exploration, development, production, communications, management, and research. Federal agencies employ geoscientists for resource mapping and assessment, oil-gas-coal-groundwater-geothermal resource evaluation and development, resource and environmental water studies, leasing and conservation, resource restoration and rehabilitation, hazards assessment and mitigation, regulatory activities, national defense, and research. State and local governments also employ geoscientists for geologic and soils mapping and resource management, natural resource and hazards evaluation and mitigation, public information activities, consulting, management, and communications. Environmental, engineering, and groundwater firms further employ geoscientists for mapping, restoration and rehabilitation planning, monitoring and evaluation of geologic hazards, and in site feasibility evaluation and implementation of construction projects, water management and reuse evaluation, groundwater pollution assessment and remediation, and contaminant prevention. Schools, colleges, universities, national laboratories, and private research firms employ geoscientists in a variety of teaching, research, and administrative positions.

Participation in internships, volunteer activities, and cooperative education and public outreach are highly recommended and supported by the department via faculty, staff, and alumni mentoring to enhance
training and career opportunities. Graduates who go on to pursue advanced degrees acquire a strong disciplinary base for diverse areas of graduate study, including environmental studies, energy, seismology, hydrology, meteorology, oceanography, and the space sciences. Geoscientists with advanced degrees can often more effectively attain management-level positions. Careers include, but are not limited to: educator, professor, environmental or geological entrepreneur or consultant, exploration professional geologist, petroleum geologist, environmental geologist, geophysicist, hydrologist, mining geologist, oceanographer, production geologist, researcher, resource evaluator, geobiologist, or seismologist. With additional training and diversification, geosciences graduates may also pursue associated careers in business, law, medicine, public policy, and other diverse professional fields. By obtaining teaching certification, graduates can become primary and secondary educators in earth sciences.

**Concentrations**
- Environmental Geology Concentration
- Geology Concentration
- Geophysics Concentration
- Hydrogeology Concentration

**Major in Geology, Environmental Geology Concentration**
Environmental Geology students develop expertise in surface and shallow subsurface processes that shape the Earth and provide critical soil and water resources and services for human and natural use. Graduates will be prepared for careers that address environmental implications of geological process and human activities on Earth. The curriculum emphasizes courses spanning the fundamentals of geology, surface, and shallow subsurface processes, field-based research methodologies, and environmental aspects of geology. The concentration empowers students to pursue positions with public, private, and nonprofit organizations that address environmental/natural resource management issues, regulatory agency compliance, hazard identification and mitigation, and fundamental scientific investigations that can inform natural resource policy and decision making that promise sound stewardship of Earth resources. The curriculum also provides a strong foundation for those planning to continue on to graduate studies in geosciences or other environmental disciplines.

**Major in Geology, Geology Concentration**

The Geology concentration provides a comprehensive, broad-based education in geology, emphasizing a practical and field-oriented approach that is well-suited to professional employment as a geologist in the energy and mining industries, government agencies, consulting firms, resource management, and other geologic fields. The Geology concentration, combined with additional training, provides an excellent background for other diverse professions, including primary and secondary school teaching, science writing, specializing in environment and resource issues as a lawyer, and resource or hazards specialization in the construction, insurance, real estate, and securities fields. The Geology concentration provides students with an excellent background for subsequent graduate studies in the geosciences.

Major in Geology, Geophysics Concentration

The Geophysics concentration combines a strong foundation in geology with additional depth in geophysics, physics, mathematics, and associated quantitative and computer skills. Students in this concentration are well prepared both for employment opportunities in a wide variety of geosciences and geotechnical fields, and for subsequent graduate training that includes geophysics, seismology, geodynamics, energy exploration, environmental geophysics, space sciences, and resource management.

Major in Geology, Hydrogeology Concentration

The Hydrogeology concentration provides training in geographical aspects of water resources and allied disciplines, while ensuring that students are well prepared for a variety of geosciences fields. Students in this concentration will be particularly well suited for employment in environmental engineering, water resource, geotechnical, and groundwater firms; government agencies managing or assessing water resources; and for subsequent graduate training in hydrogeology or other water resource- and management-related disciplines.

Master of Science in Geosciences, Plan A

The M.S. in Geosciences provides best practice preparation for employment in major fields of the geoscience profession. This is the normative working degree for many energy, environmental, natural resource, regulatory, and other professional opportunities. Each graduate student follows a custom-tailored program of coursework and research developed with their advisor and graduate committee. Strengths of the program include diverse field-driven scientific specializations; an interdisciplinary approach to addressing earth resource education, professional preparation, and global research interests; analytical, field, and computational facilities; and close student/faculty working relationships.

Faculty in the department advise M.S. students in a wide range of subdisciplines, including applied geophysics, economic geology, environmental geology, geochemistry, geochronology, geodynamics, geomorphology, geophysics, hydrogeology, igneous and metamorphic petrology, petroleum geology, sedimentology, sedimentary petrology, seismology, stratigraphy, structural geology, and tectonics. Students work with their advisor and graduate committee to identify a curriculum specific to their academic needs and goals. Prospective students should contact likely advisors to learn more that is specific about the program.

### Major in Natural Resource Tourism

Graduates possess technical skills in problem solving, systems planning, integrative team decision making, quantitative analysis, oral and verbal communications, and computer operations. Graduates are familiar with skills useful in a business setting and the historic evolution of environmental conservation. Additionally, graduates develop an appreciation for how their discipline contributes to environmental stewardship and sustainability. Two concentrations are offered – Global Tourism and Natural Resource Tourism.

### Learning Outcomes

Students will demonstrate:

- Written and oral communication skills, with a focus on writing skills. Student writing and speaking will embody characteristics that represent attention to high quality communication skills, including substance of the issue addressed, organization of the paper or presentation, mechanics, and evidence.
- Research and analytical skills. These skills will include the ability to generate a problem statement, associated research questions, data acquisition methodologies, synthesis of related information and the development of management implications and conclusions.
- Planning skills. These will involve an ability to implement the planning process, including setting goals and objectives, acquiring relevant background information, synthesizing information, conceptualizing ideas, constructing alternative courses of action, making recommendations and considering ways of evaluating decisions.

### Potential Occupations

Graduates primarily work in a variety of private commercial tourism and recreation enterprises. Competition can be intense for full time/permanent positions in highly attractive natural resource locations, although ample opportunities exist to gain experience through seasonal/temporary and volunteer work. Participation in a high quality, pre-approved internship is required for the degree. Graduates who go on for advanced studies can attain more responsible positions with the possibility of rising to top professional levels.

Career opportunities available to graduates in the global and natural resource tourism concentrations include, but are not limited to: retail relations manager; social media planner; convention sales coordinator; marketing/public relations specialist; trip counselor; travel account manager; food and beverage supervisor; small tourism enterprise/ecotourism owner/manager; regional sales director; account executive; director of trail development; tourism planner; travel pricing and demand analyst; concession specialist; marketing/sales manager; conference/meeting/event planner; resort services director; member relations director; purchasing manager; camp and nature center director; tourist information center manager; sustainable energy director.

### Concentrations

- Global Tourism Concentration
- Natural Resource Tourism Concentration

### Major in Natural Resource Tourism, Global Tourism Concentration

The Global Tourism concentration is focused on a unique blend of subjects. Business and tourism topics provide students with planning, management, marketing, financial, and entrepreneurship skills essential...
in the tourism industry. Because sustainable tourism requires a healthy natural environment, the environment is another area of study. Finally, students are provided cross-cultural experience by learning a second language, studying at a university abroad, and participating in an international internship.
