MINOR IN GEOGRAPHIC INFORMATION SCIENCE AND GEOGRAPHIC ANALYSIS

The Geographic Information Science and Geographic Analysis minor has a broad interdisciplinary application. The analytical methods introduced and the technologies used in the different courses and applied lab work are relevant to many disciplines including: urban and regional planning, marketing and business, archaeology, agriculture, conservation and engineering. This minor is designed for all students desiring to gain a background in the geographic theory, methods, tools and technical skills that will increase their employment potential in any number of applied fields where geographic analysis is a valuable skillset.
