The Graduate Degree Program in Ecology (GDPE) offers outstanding opportunities for graduate studies in ecology. The overall objective of the M.S. in Ecology is to develop students to be science professionals who use their interdisciplinary problem-solving skills to address ecological challenges from local to global scales. Students enrolled in the Plan A (thesis option) program are engaged in independent and collaborative research guided by advisors in the program and aim to have their thesis work published in the peer-reviewed literature. The Plan B option provides a non-thesis alternative available upon special request.

Students interested in graduate work should visit the Graduate Degree Program in Ecology (https://ecology.colostate.edu/) website for more information.
