Major in Watershed Science

Why Watershed Science at CSU?
Sustainable management of freshwater resources is an increasingly important and complex challenge in Colorado and worldwide, and we need scientists who can address complex water issues. The Watershed Science program focuses on how water moves through the landscape, what factors affect its quality, and how to manage water resources. Students begin their program by building a strong foundation in the physical and natural sciences in preparation for upper-division coursework in land-use hydrology, snow hydrology, water quality, and watershed problem analysis. Students gain hands-on experience with water measurements outside and in the lab, and build technical and writing skills to prepare them for careers in hydrology and water resources.

Learning Outcomes
Students will demonstrate:

- An understanding of the key concepts in watershed science including surface and subsurface hydrology and water quality.
- An understanding of land use effects on fresh water resources.

- Field and lab-based watershed measurement and data analysis skills.
- Skills in watershed problem analysis, including the use of GIS and watershed models.
- Strong critical thinking, writing, and oral communication skills.

Potential Occupations
The B.S. in Watershed Science qualifies students for a wide variety of careers in hydrology and water resources management. Examples include: watershed scientist, hydrologist, water quality analyst, watershed manager, environmental consultant, watershed use specialist, and water conservation specialist. Employment opportunities for graduates are found in consulting firms, governmental agencies, international development and resource management agencies, non-governmental organizations, and private industry. Graduates are also well positioned for advanced science degrees. The B.S. curriculum includes all of the requirements for graduates to meet the U.S. governmental hydrologist certification.

Minor in Watershed Science

The core coursework of the minor in Watershed Science addresses land use hydrology and sustainable watersheds and engages students in experiential learning in a watershed field course. The program offers a broad and flexible selection of additional coursework options that emphasize physical, biogeochemical, and societal aspects of water resources and watershed management. Students can select the combination of courses that best fits their interests and complements their major.

**Requirements**

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Graduate Certificate in Carbon Management

A workforce needs-assessment survey carried out by the Greenhouse Gas Management Institute concluded US organizations are ill-prepared for emerging regulatory emissions reporting, carbon markets are not “up-to-snuff”, and competency concerns loom with expansion of climate programs. A set of recent reports in *Nature* confirmed that new international agreements will tax the capabilities of nations and organizations to carry out the supporting accounting activities.

The Graduate Certificate in Carbon Management is designed to deliver the latest fundamental knowledge and skills to practicing environmental/sustainability professionals, enabling them to advance their careers by expanding into this emerging area.

**Effective Fall 2019**

Additional coursework may be required due to prerequisites.

**Code** | **Title** | **Credits**

ESS 545 | Applications in Greenhouse Gas Inventories | 
ESS 555/ENGR 555 | Life Cycle Assessment for Sustainability | 
ESS 625/F 625 | Ecology of Forest Production | 

**Program Total Credits:** 10-11

*This certificate may have courses in common with other graduate certificates. A student may earn more than one certificate, but a given course may be counted only in one certificate.

Graduate Certificate in Water Resources

The Graduate Certificate in Water Resources is designed to provide college graduates, current practitioners, and new professionals with targeted knowledge and skills to advance their understanding and career mobility related to water resources planning, management, and policy.

The program of study emphasizes an understanding of the hydrologic cycle and the physical processes that drive it, how humans adapt water resources to their needs, techniques for sustainable management, the evolution of laws and policies governing water use, and basic spatial and temporal analysis of water data. These skills can be applied by a wide array of natural resource managers as water planning is essential.
to sound governmental policy and community management. All courses include case studies, geospatial applications, and exercises pertaining to an array of water issues in Colorado and the United States, as well as international examples.

Career opportunities may be found in forests, parks, wildlife refuges, public lands, special-purpose water districts, academia, water resources engineering and consulting firms, nonprofit organizations, and municipal, tribal, county, state, or federal agencies.

Curriculum: Three courses total, offered through the Department of Ecosystem Science & Sustainability (https://warnercnr.colostate.edu/ess/) and CSU Online (https://www.online.colostate.edu/certificates/water-resources/), geared towards professionals across disciplines. Courses can be taken in any order.

**Effective Fall 2019**

Additional coursework may be required due to prerequisites.

**Master of Science in Ecosystem Sustainability, Plan A**

Many physical, ecological, and social factors interact to shape the future of our ecosystems and societies. CSU's innovative Master of Science in Ecosystem Sustainability enables students to develop core competencies in ecosystem science—the study of organisms and the environment—and apply that knowledge to address real-world issues. We help develop leaders in sustainability science: a new generation of practitioners able to address complex, integrated social-ecological problems in collaborative partnerships with researchers, resource users, and decision-makers.

Our graduates have the tools to understand complex scientific questions in sustainability and the leadership and collaborative skills required to address current and future issues in sustainability. The program serves as a foundation for a wide range of careers, including academic and scholarly professions, and work in government agencies, non-governmental organizations, and corporate and entrepreneurial environments.

**A focus on solutions**

Students will work at the cutting edge of new research on ecosystem sustainability. Collaborating with some of the world's leading ecosystem and sustainability scientists, students will explore solutions to global problems related to natural and water resources, food supplies, energy, greenhouse gas management, land use change, climate change, and environmental justice, among others.

**What students can expect to gain**

In the course of the degree, students will acquire:

- Detailed knowledge of quantitative and qualitative methods
- An understanding of complex ecosystem functioning
- A transdisciplinary understanding of social-ecological processes
- The ability to work in teams across disciplines and with decision makers, resource users, and team members outside of academia
- The skills to conduct integrated assessments using systems approaches; conceptual, mathematical, geospatial, and statistical models; and innovative collaborative processes
- The ability to apply critical thinking in the development of sustainable systems at local and global scales
- Advanced training in the methods of urban ecology and managing the sustainable cities of the future

**Local and Global Relevance**
Our graduate community benefits from a highly networked program with close working links to the city governments of Fort Collins, Boulder, and Denver, and to local agencies, farming communities, and non-profits across the Front Range. We work at the highest elevations of the Rockies, in the lowest short grass steppe regions, on cities, and in neighborhoods. Our active research programs are spread around the globe: from northern, eastern, and southern Africa to China, Mongolia, Nepal, Tibet, Honduras, and Mexico.

Program Total Credits: 30

A minimum of 30 credits are required to complete this program.

**Master of Science in Watershed Science, Plan A**

Sustainable management of freshwater resources is an increasingly important and complex challenge in Colorado and worldwide, and we need scientists who can address complex water issues. The watershed science programs focus on how water moves through the landscape, what factors affect its quality, and how to manage water resources. Students in the M.S. in Watershed Science, Plan A program work closely with research scientists in the classroom, laboratory, and field on both basic and applied watershed science research. Students are exposed to cutting-edge field, data analysis, and modeling techniques through flexible programs of study and access to a breadth of water-related courses throughout the university. Students also have opportunities to participate in seminars, field courses, and practical internships.

The program emphasizes the advisor/student relationship. There is no core curriculum; rather, the advisor and student develop a program of study that best meets the requirements of the research to be undertaken and the needs of the student, culminating in the completion of a master’s thesis.

The program has a strong record of employment and acceptance to leading doctoral programs after graduation, with graduates holding positions in federal, state, and local natural resource agencies, consulting firms, non-governmental organizations, industry, teaching, and research. Most students complete coursework that enables them to meet the U.S. governmental hydrologist certification.

**Requirements**

Program requirements are:

- 30 credits that meet graduate school requirements.
- Thesis
- Selected courses approved by advisor and committee -- Prefixes that can be used to meet course requirements: ANTH, AREC, ATS, BZ, CHEM, CIS, CIVE, ECOL, ECON, ENVE, ESS, FW, F, GR, GEOL, GRAD, HORT, MATH, NR, NRRT, RS, SOC, SOCR, STAA, STAT, WR.

**Master of Science in Watershed Science, Plan B**

Additionally, students participate in seminars, field courses, and practical internships to further develop their skills. Advisors and student develop a program of study that best meets the requirements of the research to be undertaken and the needs of the student, culminating in the completion of a professional report.

The program has a strong record of employment, with graduates holding positions in federal, state, and local natural resource agencies, consulting firms, nongovernmental organizations, industry, teaching, and research. Most students complete coursework that enables them to meet the U.S. governmental hydrologist certification.

Ph.D. in Watershed Science

Sustainable management of freshwater resources is an increasingly important and complex challenge in Colorado and worldwide, and we need scientists who can address complex water issues. The watershed science programs focus on how water moves through the landscape, what factors affect its quality, and how to manage water resources. Students in the Ph.D. in Watershed Science program work closely with research scientists in the classroom, laboratory, and field on both basic and applied watershed science research. Students are exposed to cutting-edge field, data analysis, and modeling techniques through flexible programs of study and access to a breadth of water-related courses throughout the university. Students also have opportunities to participate in seminars, field courses, and practical internships.

The Ph.D. in Watershed Science requires 72 credits, most of which are research credits. Coursework includes in-depth classes in the student's area of research, as well as classes that expand into other disciplines. Each student develops an individualized program of study with the guidance and approval of the student's graduate committee. Students in the Ph.D. program develop new contributions to the literature of the watershed science discipline.

Major in Fish, Wildlife, and Conservation Biology

Professor Will Clements
Chair of the Undergraduate Major

The Fish, Wildlife, and Conservation Biology major is intended for students interested in understanding wildlife and the habitats in which they live. We offer three concentrations: Conservation Biology, Fisheries and Aquatic Sciences, and Wildlife Biology. The curriculum has a strong foundation in the biological, physical, and social sciences with the focus on solving current and future issues related to conservation and sustainability of wild animals and their habitats. The faculty offers a wide range of expertise with a keen interest in innovative teaching and research methods.

Our program prepares students for professional careers involving fish, wildlife, and conservation that include federal and state agencies, nongovernmental organizations, the private sector, academic institutions, and graduate school. Numerous opportunities exist for students to gain experience through research and internships, including professional and career mentoring and involvement with professional societies to further their studies, practical experience, and career potential. Required natural science courses include general biology, vertebrate biology, botany, calculus, and statistics, while required courses in the major focus on wildlife ecology and conservation, principles of wildlife management, design of wildlife projects, conservation biology, fishery science, and wildlife data collection and analysis.

Required courses in the concentrations, as well as elective courses, explore specific areas of fish, wildlife, and conservation biology. A summer field course at CSU’s mountain campus is required and provides
students with hands-on learning about natural resource ecology and measurements. Additional hands-on opportunities exist in courses and study abroad programs. Along with a strong science foundation, problem solving, communication skills and outreach, are important to resolve difficult issues faced by today’s natural resource professionals.

**Learning Outcomes**

Students will:

- Demonstrate a mastery of ecological concepts and fundamental principles and techniques to manage and conserve fish and wildlife populations, and how they apply to current natural resource management issues
- Demonstrate mathematical, statistical, and study design knowledge and skills required for careers in fishery, wildlife, and conservation biology
- Become effective in oral and written communication about issues related to the environment and natural resources, including as members of multi-disciplinary teams
- Learn approaches to solving complex natural resource management issues, including planning, organizing, creating, and presenting group projects

**Potential Occupations**

Federal and state agencies that manage natural resources offer most employment opportunities in fish, wildlife, and conservation biology. Key federal agencies include the U.S. Forest Service, Fish and Wildlife Service, Bureau of Land Management, Geological Survey, National Park Service, Environmental Protection Agency, Bureau of Reclamation, National Marine Fisheries Service, and state departments of wildlife and natural resources. Non-governmental organizations, e.g., The Nature Conservancy, private companies, and environmental consultants also offer excellent opportunities. Participation in internships, independent study/research, volunteer activities, or cooperative education opportunities is highly recommended to enhance practical training and development. Undergraduates who go on for graduate-level studies can attain more advanced positions with the possibility of rising to top professional levels, e.g., researchers and teachers in academic institutions and scientists at natural resource agencies. Our degree is also excellent preparation for veterinary school.

Examples of career opportunities include, but are not limited to: fishery/wildlife/conservation biologist, ecologist, wildlife refuge or natural resource manager, environmental consultant, research scientist, and educator. Within these areas, a variety of specializations are possible including fish, wildlife, and conservation education and interpretation; endangered species; habitat enhancement and restoration; administration; research; law enforcement, fish and wildlife population assessment, statistical analyst, and human-wildlife conflicts.

**Concentrations**

- Conservation Biology Concentration
- Fisheries and Aquatic Sciences Concentration
- Wildlife Biology Concentration

**Major in Fish, Wildlife, and Conservation Biology, Conservation Biology Concentration**

The Conservation Biology concentration focuses on understanding the ecological processes necessary to conserve biological diversity, with an emphasis on fish and wildlife species and their habitats.

**Requirements**

**Effective Spring 2020**

A minimum grade of C (2.000) is required in all biological, mathematical/statistical, physical science, fish, wildlife, and conservation biology and natural resource courses used to meet graduation requirements for the fish, wildlife, and conservation biology major. The minimum applies to courses taken as substitutions for meeting these requirements.

1. Students taking this biology selection should choose a botany-related course in the department elective options to meet the botany/plant course requirements for certain federal positions related to wildlife, fisheries, and/or conservation biology.

2. Students may need to obtain a registration override from the appropriate department to take this course.

3. Students in the Honors Track 1 program must take HONR 499.

4. FW 300 and FW 301 count together as one selection in this choice.

5. Restricted to FW subject code, department travel abroad courses, taught by FWCB faculty. No transfer or substitute courses will be accepted.

6. Guided electives are courses intended to expand a student's depth and breadth in wildlife biology and include any 300- or 400-level regular course with a BC, BMS, BSPM, BZ, CHEM, ESS, F, FW, GES, MATH, MIP, NR, NRRT, PH, RS, SOCR, STAT, or WR subject code excluding courses ending in -80 to -99; SOCR 240; other courses with prior approval by department and advisor. Courses may not double-count as Guided Electives and for other requirements in the major.

7. Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

### Major Completion Map

**Distinctive Requirements for Degree Program:**

The curriculum for the Fish, Wildlife, and Conservation Biology major – Conservation Biology concentration assumes students enter college prepared to take calculus. Students who have not met the prerequisites for calculus, will be required to successfully complete the prerequisites in their first year. A minimum grade of C (2.000) is required in all biological, mathematical / statistical, physical science, fish, wildlife, and conservation biology, and natural resources courses used to meet graduation requirements for the fish, wildlife, and conservation biology major. The minimum applies to courses taken as substitutions for meeting degree requirements. NR 220 is a summer course in which students reside at CSU’s Mountain Campus. Students must choose ONE of two CHEM + PH paths: (Path A) CHEM 107/CHEM 108 and PH 121/PH 122 or (Path B) CHEM 111, CHEM 112, CHEM 113, CHEM 114 and PH 110/PHEL 111. Students must also choose ONE biology group A) BZ 110/BZ 111 or B) LIFE 102/LIFE 103.

Major in Fish, Wildlife, and Conservation Biology, Fisheries and Aquatic Sciences Concentration

The Fisheries and Aquatic Sciences concentration allows students to focus on a strong background in basic fishery ecology, management, and conservation, which includes an understanding of the linkages between land and water.

Students choosing the Fisheries and Aquatic Sciences concentration are also required to complete at least 160 hours of paid or non-paid employment related to fishery and aquatic biology.

Requirements Effective Spring 2020

A minimum grade of C (2.000) is required in all biological, mathematical/statistical, physical science, fish, wildlife, and conservation biology, and natural resource courses used to meet graduation requirements for the fish, wildlife, and conservation biology major. The minimum applies to courses taken as substitutions for meeting these requirements. Students choosing the Fisheries and Aquatic Sciences concentration are also required to complete at least 80 clock hours in an internship experience related to fishery and aquatic biology.

Major in Fish, Wildlife, and Conservation Biology, Wildlife Biology Concentration

The Wildlife Biology concentration focuses primarily on terrestrial vertebrates and their habitats, and builds a strong foundation in basic wildlife ecology, management, and conservation.

Requirements Effective Fall 2019

A minimum grade of C (2.000) is required in all biological, mathematical/statistical, physical science, fish, wildlife and conservation biology, and natural resource courses used to meet graduation requirements for the Fish, Wildlife, and Conservation Biology major. The minimum applies to courses taken as substitutions for meeting these requirements.

1. Students taking this biology selection should choose a botany-related course in the department elective options to meet botany/plant course requirements for certain federal positions related to wildlife, fisheries, and/or conservation biology.
2. Students in the Honors Track 1 program must take HONR 499.
3. FW 300 and FW 301 count together as one selection in this choice.
4. Students will need to obtain a registration override from the appropriate department to take this course.
5. Restricted to FW subject code, department travel abroad courses, taught by FWCB faculty. No transfer or substitute courses will be accepted.
6. Guided Electives are courses intended to expand a student's depth and breadth in wildlife biology and include any 300- or 400-level regular course with a BC, BMS, Bspm, BZ, CHEM, ESS, F, FW, GES, MATH, MIP, NR, NRRT, PH, RS, SOCR, STAT, or WR subject code (excluding courses ending in -80 to -99); SOCR 240; other courses with prior approval by department and advisor. Courses may not double-count as Guided Electives and for other requirements in the major.

**Major Completion Map**

**Distinctive Requirements for Degree Program:** The curriculum for the Fish, Wildlife and Conservation Biology major – Wildlife Biology concentration assumes students enter college prepared to take calculus. Students who have not met the prerequisites for calculus, will be required to successfully complete the prerequisites in their first year. A minimum grade of C (2.000) is required in all biological, mathematical/statistical, physical science, fish, wildlife, and conservation biology, and natural resource courses used to meet graduation requirements for the fish, wildlife, and conservation biology major. The minimum applies to courses taken as substitutions for meeting degree requirements. NR 220 is a summer course in which students reside at CSU’s Mountain Campus. Students must choose ONE of two CHEM + PH paths: (Path A) CHEM 107/CHEM 108 and PH 121/PH 122 or (Path B) CHEM 111, CHEM 112, CHEM 113, CHEM 114 and PH 110/PH 111. Students must also choose ONE biology group A) BZ 110/BZ 111/BZ 120 or B) LIFE 102/LIFE 103.

**Graduate Certificate in Conservation Actions with Lands, Animals, and People**

The course content and applied assignments in the Graduate Certificate in Conservation Actions with Lands, Animals, and People, seek to integrate a holistic approach for sustainable practices with lands, animals, and people in private and public sectors using history, philosophy, policy, management techniques, leadership, education, and communications to improve environmental management, human interactions, and social/environmental justice.

Students will gain critical insights into issues, uses, and management of natural resources. Students will gain an understanding and develop skills to review situations and viewpoints that impact public and private debate, and use assignments that may influence decisions in conservation. Upon completion of this certificate, students will have foundations to be stronger leaders, better communicators, and more active members of their communities.

The fire and emergency services have a long and proud history of serving their communities with a wide variety of fire protection, prevention, emergency medical, and public education services. The fire and emergency services administrators of the future need advanced administration, management, and leadership skills to address the ever-evolving nature of emergency services. The major prepares students for managerial and officer positions in emergency and fire service organizations.

The major is a degree completion program for students to gain advanced knowledge of emergency service related subjects. The coursework builds upon technical skills and experiences earned in First Responder associate degree programs and on-the-job training. Students will explore key administrative and management areas such as emergency operations, public service budgeting, human resources, prevention, and incident command. The major is focused on the administration and management of First Responder organizations.

All fire and emergency services administration courses are upper-division and offered online via distance education only through the Division of Continuing Education/CSU Online (http://www.online.colostate.edu/).

Learning Outcomes

Students will demonstrate their ability to:
- Effectively integrate academic knowledge into fire and emergency services administrative and managerial roles within current and future employment situations.
- Collaborate with peers to solve fire and emergency services organizational problems. Effective collaboration includes the ability to organize and synthesize ideas, develop a persuasive argument, interact with individuals and groups, and use applicable presentation aids.
- Apply their knowledge, skills, and competencies in the fire and emergency services field to fire and emergency services organizations. Examples include knowledge of proposal and report writing, trends in emergency management and incident command systems, and comprehension of public service administration practices.
- Interact with professional First Responders nationally and internationally.

### Potential Occupations

Students in the Fire and Emergency Services Administration major should have work experience in the fire and emergency services field. Typical students are employed as career or volunteer firefighters, wildland firefighters, paramedics, emergency medical technicians, inspectors, or trainers. Graduates can expect positions as fire chiefs, company officers, public administrators, fire marshals, or educators.

### Requirements

Major in Forest and Rangeland Stewardship

Forests and rangelands are always changing, sometimes very slowly as a result of long-term processes, followed by rapid changes as a result of fires, timber harvesting, or grazing. Rangelands occupy nearly fifty percent of the earth's land surface and consist of natural grasslands, savannas, shrublands, riparian areas, deserts, tundra, and coastal marshes. Sustaining forests and rangelands in the modern world requires managers who understand ecosystem changes, and how forests and rangelands connect to global, ecological, and social systems. State and federal land management agencies, private landowners, consultants, and conservation organizations employ graduates of the Forest and Rangeland Stewardship (FRS) major. The curriculum includes a balanced mix of courses in plant and animal biology, integrated resource management, and the physical sciences. Colorado is an ideal setting for the study of forestry and rangeland ecology and management with shortgrass steppe to the east and high elevation grasslands, forests, woodlands, and riparian areas to the west. Students learn about ecosystem productivity, policy, conservation, and the latest in computer-based management tools. Students also gain an understanding of economics related to recognizing alternatives and analytical and decision-making skills, as well as developing communication, political and interpersonal skills to make their education effective, and contribute to their respective fields fully upon graduation.

The forestry-specific concentrations within the FRS major are accredited by the Society of American Foresters, with curricula meeting the Office of Personnel Management (OPM) requirements for the forestry series (0460) and the forestry technician series (0462). The range-specific concentrations in the FRS major are accredited by the Society for Range Management and students generally meet the OPM requirements for the Rangeland Management Series (0454) and Soil Conservation Series (0457).

Students in the FRS major will gain an understanding of and learn how to manage the animal, soil, and vegetation resources on rangelands or in forests for state and federal land management agencies as well as a variety of private landowners and non-governmental agencies. With a few additional courses, graduates meet OPM requirements for the Ecology Series (0408). Students develop an in-depth understanding of basic plant and animal biology; a basic understanding of the physical sciences as they relate to rangeland ecology; and knowledge of important concepts of ecology and range management.

The FRS major includes summer field courses. All FRS students take a 4-week summer field course at the CSU Mountain Campus for field studies in forest and rangeland ecology and management, wildlife, watershed and human dimensions of natural resources. Students in the forestry concentrations take another 2-week summer field course at the Mountain Campus that focuses on forestry field measurements. Students in the rangeland concentrations take a 1-week summer field course focused on rangeland inventory and assessment that is normally held in shortgrass steppe or foothills rangelands close to Fort Collins.

Careers in forestry and natural resources are exceptionally varied, challenging, and personally satisfying. Opportunities are available in rural and urban settings worldwide. Positions are available in industry, education, consulting, public service, and government agencies. Some examples of career opportunities include, but are not limited to: forest manager, forest/park ranger, environmental policy and conservation consultant, fire fighter/manager, natural resource journalist, naturalist, land use planner, geospatial information systems specialist, forest products business person, researcher/professor.

Examples of career opportunities in range management include, but are not limited to: restoration ecologist, rangeland scientist, rangeland management specialist, soil conservationist, soil scientist, rangeland conservationist, plant ecologist, riparian ecologist, ranch manager, researcher, commercial sales and service representative, consultants, mine rehabilitation specialist, real estate/land manager, and international rangeland specialist.

**Major in Forest and Rangeland Stewardship, Forest Fire Science Concentration**

The Forest Fire Science concentration in the Forest and Rangeland Stewardship major provides forestry education that spans the entire range of experiences necessary to understand and manage forests. Curricula include a background in the biological, physical, social, and management sciences, followed by professional forestry courses. More specifically, this concentration is the study of fire as an ecological process and its application as a forest management tool. Students learn how to control wildfires and how prescribed fires can enhance habitat, prepare seedbeds, control forest insects and disease, and reduce fuel hazards.

Major in Forest and Rangeland Stewardship, Forest Management Concentration

The Forest Management concentration in the Forest and Rangeland Stewardship major provides forestry education that spans the entire range of experiences necessary to understand and manage forests. Curricula include a background in the biological, physical, social, and management sciences, followed by professional forestry courses. More specifically, this concentration is designed to instill an understanding of the basic principles of forest ecology and forest management. Although many students go on to graduate studies, the program is primarily intended for students interested in managing forestlands.

Major in Forest and Rangeland Stewardship, Rangeland Conservation and Management Concentration

The Rangeland Conservation and Management concentration in the Forest and Rangeland Stewardship major emphasizes interdisciplinary study, research, and management of the world’s rangelands. More specifically, this concentration focuses on the stewardship of rangelands for multiple uses. These uses include both consumptive and non-consumptive activities such as recreation, preservation of wildlife habitat, providing for aesthetic beauty, livestock grazing, and ranching.

Major in Natural Resources Management

The goal of the Natural Resources Management major is to provide students with a broad-based understanding of the interconnectedness of social, political, and ecological systems. This knowledge will enable students to design sustainable solutions to address natural resource conservation and management problems. Students will learn about natural resource stewardship in both theory and practice, with an eye toward designing systems that are adaptable and resilient in light of the social and ecological complexity and change that characterize today’s challenges. Using an integrative approach, students will learn how to develop local solutions that are sustainable and ethical at larger, global scales. Environmental issues such as land-use change and planning, conservation biology, energy use, climate change, renewable resource management, and citizen engagement in place-based conservation will be addressed. Field measurements and field skills are important components of this major, and students are required to attend a four-
week summer field course in ecological investigations and resource management.

Specific objectives are to provide each student with:

1. a science-based core curriculum in biological, physical, and social sciences;
2. a broad foundation in natural resources science and environmental management; and
3. specialization in a subject relevant to natural resources management.

The breadth of the major allows students to specialize in a wide range of topics, including conservation biology, geographic information systems, forest management, rangeland ecology, restoration ecology, natural resource policy, recreation resources, watershed management, wildlife management, or other topics related to natural resources management. This specialization is accomplished by coupling the major with a required minor, typically declared by a student’s junior year.

Students are encouraged to participate in internships and obtain related work experience. Participating in seasonal and voluntary work, internships, and cooperative education opportunities will enhance your chances for permanent full-time employment. The department offers numerous opportunities to become engaged in these kinds of endeavors. At the completion of the program, students should have the technical and communication skills that are critical to resolving important natural resource management problems.

Learning Outcomes

Students will:

- Demonstrate knowledge of a wide range of natural resource topics spanning ecological, social and physical aspects of wildland ecosystems
- Demonstrate proficiency in an area of specialization through completion of a minor in an area complementary to natural resource management. Some minors that students find well-suited to develop a proficiency are Global Environmental Sustainability, Forestry, Rangeland Ecology, Ecological Restoration, Watershed Science, Conservation Biology, or Environmental Affairs, though there are many additional options
  - Be able to apply their broad natural resources knowledge to create sustainable solutions at local, national, and global scales
  - Accurately communicate their knowledge of natural resources, both verbally and in written form

Potential Occupations

Opportunities are available with a wide array of local, national, and international organizations and institutions involved in natural resource management. Graduates apply their education in science, technology, social science, and policy to solving today’s critical natural resource and environmental problems.Positions are found with federal, state, and local government agencies, industry, and education and advocacy organizations. Some natural resource professionals are employed in environmental consulting firms and corporate environmental departments. The nonprofit sector provides a variety of environmentally-related jobs, ranging from science application to policy development, education, and collaborative conservation.

Examples of available career choices include, but are not limited to: natural resource manager; professional forester; land use planner; geographic information system (GIS) or remote sensing specialist; fishery/wildlife manager; environmental policy analyst; environmental advocate; environmental consultant; resources/environmental lawyer (with continued education); youth agency administrator; natural resource communications specialist; law enforcement officer; natural resources/environmental educator; restoration specialist; multiple resource use planner; regulatory compliance enforcement officer.

Major in Restoration Ecology

The Major in Restoration Ecology emphasizes interdisciplinary study, research, and restoration of damaged, degraded or destroyed rangelands and forested ecosystems of the world. More specifically, this major focuses on the restoration of rangelands and forests for multiple uses. These uses include both consumptive and non-consumptive activities such as recreation, preservation of wildlife habitat, providing for aesthetic beauty, livestock grazing, and timber production. forests and rangelands occupy the vast majority of the earth’s land surface and Colorado is an ideal setting for the study of restoration ecology with many different types of rangeland and forest ecosystems in close proximity.

Students in this program will gain the important knowledge and skills necessary to restore damaged ecosystems. They will learn how to manipulate soil, water, vegetation and animal resources in order to implement successful restoration for local, state and federal land management agencies as well as for a variety of private entities, landowners and non-governmental agencies. Students develop an in-depth understanding of basic plant and animal biology; a basic understanding of the physical sciences as they relate to restoration ecology; knowledge of important concepts of ecology and natural resources management; an understanding of economics related to evaluating alternatives; and analytical and decision-making skills. Students also develop communication, political and interpersonal skills to make their education effective. Examples of career opportunities include, but are not limited to restoration ecologist, soil conservationist, plant ecologist, riparian ecologist, researcher, commercial sales and service representative, consultants, and mine reclamation specialist.

The minor in Ecological Restoration allows students in related majors to gain knowledge of the science and art of restoring ecosystems. This background is especially valuable to students who will be working in the various natural resource management fields. Since the prevalence of damaged, degraded or destroyed ecosystems is likely to increase in the future, restoration will be imperative for transforming these lands to once again provide ecosystem services.

Students are required to take NR 479: Restoration Case Studies, which includes a required field trip one week prior to the first day of the fall semester.

To get more information about this minor or to officially declare it, please visit warnercnr.colostate.edu/frs/undergraduate-program/advising/ to make an appointment with an advisor.

**Minor in Ecological Restoration**

**Requirements**

**Effective Spring 2013**

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.
Minor in Forestry

The minor in Forestry provides students with the opportunity to obtain exposure to forest sciences. It provides insight into the management of forested lands and is particularly appropriate for students majoring in other natural resource disciplines or natural sciences.

To get more information about this minor or to officially declare it, please visit https://warnercnr.colostate.edu/frs/undergraduate-program/advising/ to make an appointment with an advisor.

Minor in Range Ecology

The minor in Range Ecology provides an academic background for students interested in wildlife habitat, integrated land management, ranch management, applied ecology, and international development of arid lands. The minor provides additional flexibility for students who have a liberal arts or international education goal, but would like to increase their employment potential in an applied area. A minimum of 12 credits in the minor must be from Rangeland Ecosystem Science (RS) courses.

To get more information about this minor or to officially declare it, please visit https://warnercnr.colostate.edu/frs/undergraduate-program/advising/ to make an appointment with an advisor.

Major in Geology

The Major in Geology provides a rigorous academic and practical basis for diverse professional geosciences careers that include private and public sector water, energy, mineral and other natural resources, geologic hazards, resources and environmental management, and education. The major also provides a quantitative science and general education background for graduate education in specialized fields, including hydrology, geophysics, environmental geology, economic geology, resources management, public policy, and many other areas.

The Geology curriculum encompasses a strong geosciences education within the broader framework of a liberal education. Emphasis is placed on integrating field studies in the Colorado Rocky Mountains and elsewhere with extensive on-campus classroom and laboratory work. In addition to obtaining a thorough knowledge of geosciences, students complete courses in mathematics, physical sciences, communications, and the liberal arts that lead to effective quantitative, decision making, and communications skills. Four concentrations are offered to allow focus on specialized career interests: Geology, Environmental Geology, Geophysics, and Hydrogeology.
Learning Outcomes

Students will demonstrate:

- A solid foundation in the physical sciences and broad understanding of geological processes
- Application of field and classroom scientific reasoning skills to data analysis and problem solving in the geosciences, both individually and in teams
- An awareness of sociopolitical, economic factors, and ethical practices and standards relevant to professional careers in geosciences

Potential Occupations

Many opportunities exist for geology graduates in the private and public sectors within a wide range of societally important and satisfying careers. Environmental management, energy resources, water resource and management, construction services, mining, power generation, computer software, and many other industries employ geoscientists in exploration, development, production, communications, building, management, and research. Federal agencies employ geoscientists for resource assessment, mapping, and assessment, oil-gas-coal-groundwater-geothermal water studies, leasing and conservation, resource restoration and rehabilitation, hazards assessment and mitigation, regulatory activities, national defense, and basic and applied research. State and local governments also employ geoscientists for geologic and soils mapping and resource management, natural resources, hazards evaluation and mitigation, public information activities, consulting, management, and communications. Environmental, engineering, and groundwater firms further employ geoscientists for mapping, restoration and rehabilitation planning, monitoring and evaluation of geologic and built environment hazards, and in site feasibility evaluation and implementation of construction projects, water management and reuse evaluation, groundwater pollution assessment and remediation, and contaminant prevention. Schools, colleges, universities, national laboratories, and private research firms employ geoscientists in a variety of teaching, research, and administrative positions.

Participation in internships, volunteer activities, collaborative team-building activities, professional societies, education, and public outreach and engagement are highly encouraged and supported by the department via faculty, staff, and alumni mentoring to enhance training and career opportunities. Graduates who go on to pursue advanced degrees acquire a strong disciplinary base for diverse areas of graduate study, including environmental studies, energy, seismology, hydrology, meteorology, oceanography, and the space sciences. Geoscientists with advanced degrees can often more effectively attain management-level and research positions. Careers include, but are not limited to: educator, professor, environmental or geological entrepreneur or consultant, exploration professional geologist, petroleum geologist, environmental geologist, geophysicist, hydrologist, mining geologist, oceanographer, production geologist, researcher, resource evaluator, geobiologist, or seismologist.

With additional training and diversification, geosciences graduates may also pursue associated careers in business, law, medicine, public policy, and other diverse professional fields. By obtaining teaching certification, graduates can become primary and secondary educators in geosciences.

Concentrations

- Environmental Geology Concentration
- Geology Concentration
- Geophysics Concentration
- Hydrogeology Concentration

Major in Geology, Environmental Geology Concentration

Environmental Geology students develop expertise in surface and shallow subsurface processes that shape the Earth and provide critical soil and water resources and services for human and natural use. Graduates will be prepared for careers that address environmental implications of geological process and human activities. The curriculum emphasizes courses spanning the fundamentals of geology, surface, and shallow subsurface processes, field-based research methodologies, and environmental geosciences. The concentration empowers students to pursue positions with public, private, and nonprofit organizations that address environmental/natural resource management issues, regulatory agency activities, hazard identification and mitigation, and fundamental scientific investigations that can inform natural resource policy and decision making to advance the sound stewardship of natural resources. The curriculum also provides a strong foundation for those planning to continue on to graduate studies in geosciences and other environmental disciplines.

**Major in Geology, Geology Concentration**

The Geology concentration provides a comprehensive undergraduate education in geology, emphasizing a hands-on and field-oriented approach that is well-suited to professional careers in the energy and mining industries, government agencies, consulting, resource management, and the many other fields that employ geologists. The Geology concentration, combined with additional education, provides an excellent science background for other diverse careers, including primary and secondary school teaching, science writing, environmental and resource law, and resource and/or hazards specializations within the construction, insurance, real estate, and securities industries. The Geology concentration additionally provides a foundational background for graduate education in the geosciences.

2. MATH 160 is recommended.
3. Select at least two upper-division regular or experimental GEOL courses (300-381, 402-481, 500-581) for a minimum of five credits. A maximum of two credits may be satisfied by non-regular courses (courses ending in -82 to -99) and GEOL 401, which may only count once.
4. STAT 315 can be used to fulfill technical elective requirement if not taken for statistics requirement in junior year.
5. Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

# Major in Geology, Geophysics Concentration

The Geophysics concentration combines a strong foundation in geology with additional depth in geophysics, physics, mathematics, and associated quantitative and computer skills. Students in this concentration are well prepared both for employment opportunities in a wide variety of geosciences and geotechnical fields, and for graduate education in geophysics, seismology, geodynamics, energy exploration, environmental geophysics, space sciences, and resource science and management.

Program Total Credits: 120
Major in Geology, Hydrogeology Concentration

The Hydrogeology concentration provides a rigorous education in geological aspects of surface and subsurface water resources and allied disciplines, while ensuring that students are well prepared for a variety of geosciences careers. Students will be particularly well prepared for employment in environmental, water resource, geotechnical, and groundwater careers; in private employment or in government agencies managing or assessing water resources; and for graduate education in hydrogeology or other water science, environmental, and resource disciplines.

Master of Science in Geosciences, Plan A

The Master of Science in Geosciences provides best practice preparation for employment in major fields of the geoscience profession. This is the normative working degree for many energy, environmental, natural resource, regulatory, and other professionals. Each graduate student follows a custom-tailored program of coursework and research developed with their advisor and graduate committee. Strengths of the program include diverse scientific specializations, an interdisciplinary approach to addressing earth resource education, professional preparation, global research interests, strong field research, and close student/faculty working relationships.

Faculty in the department advise M.S. students in a wide range of subdisciplines represented by the faculty, including geophysics, economic geology, environmental geology, geochemistry, geochronology, geodynamics, geomorphology, hydrogeology, igneous and metamorphic petrology, petroleum geology, sedimentology, sedimentary petrology, seismology, stratigraphy, structural geology, and tectonics. Students work with their advisor and graduate committee to identify a curriculum specific to their academic needs and goals. Prospective students should contact appropriate faculty advisors in the department to develop a program plan.

GEOL 110 & GEOL 121 Introduction to Geology-Parks and Monuments (GT-SC2) and Introductory Geology Laboratory (GT-SC1) 4

Major in Natural Resource Tourism

Graduates possess technical skills in problem solving, systems planning, integrative team decision making, quantitative analysis, oral and verbal communications, and computer operations. Graduates are familiar with skills useful in a business setting and the historic evolution of environmental conservation. Additionally, graduates develop an appreciation for how their discipline contributes to environmental stewardship and sustainability. Two concentrations are offered – Global Tourism and Natural Resource Tourism.

Learning Outcomes

Students will demonstrate:

- Written and oral communication skills, with a focus on writing skills. Student writing and speaking will embody characteristics that represent attention to high quality communication skills, including substance of the issue addressed, organization of the paper or presentation, mechanics, and evidence.
- Research and analytical skills. These skills will include the ability to generate a problem statement, associated research questions, data acquisition methodologies, synthesis of related information and the development of management implications and conclusions.
- Planning skills. These will involve an ability to implement the planning process, including setting goals and objectives, acquiring relevant background information, synthesizing information, conceptualizing ideas, constructing alternative courses of action, making recommendations and considering ways of evaluating decisions.

Potential Occupations

Graduates primarily work in a variety of private commercial tourism and recreation enterprises. Competition can be intense for full time/permanent positions in highly attractive natural resource locations, although ample opportunities exist to gain experience through seasonal/temporary and volunteer work. Participation in a high quality, pre-approved internship is required for the degree. Graduates who go on for advanced studies can attain more responsible positions with the possibility of rising to top professional levels.

Career opportunities available to graduates in the global and natural resource tourism concentrations include, but are not limited to: retail relations manager; social media planner; convention sales coordinator; marketing/public relations specialist; trip counselor; travel account manager; food and beverage supervisor; small tourism enterprise/ ecotourism owner/manager; regional sales director; account executive; director of trail development; tourism planner; travel pricing and demand analyst; concession specialist; marketing/sales manager; conference/meeting/event planner; resort services director; member relations director; purchasing manager; camp and nature center director; tourist information center manager; sustainable energy director.

Concentrations

- Global Tourism Concentration
- Natural Resource Tourism Concentration

Major in Natural Resource Tourism, Global Tourism Concentration

The Global Tourism concentration is focused on a unique blend of subjects. Business and tourism topics provide students with planning, management, marketing, financial, and entrepreneurship skills essential in the tourism industry. Because sustainable tourism requires a healthy natural environment, the environment is another area of study. Finally, students are provided cross-cultural experience by learning a second language, studying at a university abroad, and participating in an international internship.

### Master of Tourism Management, Plan C (M.T.M)

The Master of Tourism Management (MTM) is an innovative nine-month master’s program that prepares students to advance their career in public, commercial, or nonprofit organizations in the natural resource tourism industry. The MTM emphasizes the combination of tourism, business, and sustainability concepts. This program is applicable for those looking to develop a tourism enterprise, enter the tourism industry, or become more competitive when seeking higher level positions within the industry.

The program includes graduate courses in:

- Applied concepts and skills that guide strategic analysis, decision-making, and management practices for tourism professionals that reflect the interdependence of diverse sectors within the tourism industry;
- The social, technological, economic, environmental, and political implications of tourism activities (emphasizing the triple bottom line of sustainable practice) and their impacts on land use and natural resources;
- The foundations of sustainable tourism development; and
- The identification and understanding of international policies, trends, and challenges facing the tourism industry.

The MTM program is available on-campus (https://warnercnr.colostate.edu/hdnr/master-tourism-management/) or through CSU Online (https://www.online.colostate.edu/degrees/tourism-management/). Coursework from the graduate certificates in Adventure Tourism Management (https://www.online.colostate.edu/certificates/adventure-tourism/), Ski Area Management (https://www.online.colostate.edu/certificates/ski-area-management/) or Agritourism Management (https://www.online.colostate.edu/certificates/...
agritourism-management/) can be substituted for specific coursework within the MTM program.

Program Total Credits: 30-32

A minimum of 30-32 credits are required to complete this program.

1. Memorandum of Understanding (MOU) with international universities may identify culturally specific course substitutions and total credits.
2. Select a minimum of 4 credits of directed electives approved by advisor. For those international students enrolled in this program, the number of directed electives credits (approved by the advisor) is to be consistent with the MOU with the cooperating international university.
3. Directed electives may be used toward a certificate with approval of advisor. The number of directed electives that satisfy the Master of Tourism Management and a graduate certificate may be limited by advisor.
For a complete list of departmental program offerings (including certificates), see individual department catalog pages.

College Programs

Our goal is to provide an extraordinary education to students in order to prepare them for science careers in industry, modern research and academia. In addition, the College of Natural Sciences provides foundational courses in the biological, mathematical, behavioral, and physical sciences for CSU's seven other colleges, supporting CSU's broad liberal arts and general education objectives.

Undergraduate Majors

The college's eight departments offer twelve undergraduate majors, all leading to a Bachelor of Science degree which requires a minimum of 120 credits including 42 or more credits in upper-division courses. The undergraduate major in Neuroscience is offered jointly with the College of Veterinary Medicine and Biomedical Sciences.

A major should be chosen based with both educational and career objectives in mind. Students earning degrees in College of Natural Sciences majors will be well prepared to succeed in careers in biochemistry, biology, chemistry, computer science, mathematics, physics, and statistics, including middle/high school science and math instruction. Students who plan to enter a human- or animal-health profession must formally declare an academic major. There is no specific premedical, pre-veterinary, etc. major at CSU because health profession programs do not require a specific major, only specific courses. Majors such as Biological Sciences, Biochemistry, Chemistry, Psychology and Zoology are popular for students interested in a career in the health professions.

All College of Natural Sciences students have the ability to work with an academic advisor to plan the coursework necessary to graduate from CSU. The College of Natural Sciences also provides students with the opportunity to seek specialized career counseling from a career education manager in the CSU Career Center. Our services are offered to all Natural Sciences students and alumni in all aspects of their career development. Additionally, pre-health professions advisors are available at the Collaborative for Student Achievement (http://studentachievement.colostate.edu/), located in Canvas Stadium, East Building, 1415 Meridian Ave.

The college provides multiple opportunities for students to become engaged outside the classroom, including SACNAS, Student Leaders in Science, the College of Natural Sciences Learning Community (a residential learning community), and undergraduate research opportunities.

Education Abroad

Education abroad programs are available to all students in the College of Natural Sciences. Because the knowledge of another culture is valuable in understanding one's own, students are strongly encouraged to participate in at least one educational experience outside of the United States as part of their overall program at CSU. Students interested in education abroad should plan, well in advance, by discussing opportunities with their academic advisor and by visiting the Education Abroad Office through the Office of International Programs (http://educationabroad.colostate.edu). The Education Abroad office offers information about credit and non-credit opportunities (service-learning/ volunteer, research, internships), as well as support prior to and during travel, information about scholarships and financial aid, and resources for diverse populations (including adult learners & veterans, multicultural students and students with disabilities).

Graduate Programs

Faculty and graduate students in the College of Natural Sciences are engaged in cutting-edge research in multiple disciplines and the college is proud of the graduate student education it provides. Master of Science and Doctor of Philosophy degrees are offered by all departments and a Master of Natural Sciences Education is offered through the college. The college also offers Professional Science Master's in Natural Sciences degrees with specializations in Biological Data Analytics, Microscope Imaging Technology, and Zoo, Aquarium and Animal Shelter Management. For detailed information about graduate degree programs, please consult the appropriate department and see the Graduate and Professional Bulletin.

Major in Data Science

Data science is the discovery of knowledge and insight through the analysis of data. As such, it draws on the study of algorithms and their implementation from computer science, the power of abstraction and of geometric and topological formalism from mathematics, and the modeling and analysis of data from statistics. It has emerged as a separate field in response to the avalanche of data from web enabled sensors and instrumentation, mobile devices, web logs and transactions, and the availability of computing power for data storage and analysis. Modern data is challenging not only due to its large scale, but also because it is increasingly heterogeneous and unstructured. Information gleaned from this data none-the-less is revolutionizing diverse areas of human endeavor from health policy to high energy physics.

Courses used to satisfy requirements outside this minor cannot count toward completing this minor. If using a course toward major requirements, the student must take a different course for this minor.

Minor in Data Science

Students with a minor in Data Science will receive foundational training in modern data science to complement and enhance their major field of study.

Requirements

Effective Fall 2020

Effective Fall 2020 Additional coursework may be required due to prerequisites.

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Major in Natural Sciences

The Bachelor of Science in Natural Sciences meets the needs of two audiences:

- Students who wish to become high school or junior high/middle school science teachers.
- Students who seek a broad exposure to mathematics and the physical sciences, rather than specialization in one discipline.

Learning Outcomes

Students will demonstrate:
• Skills to critically interpret scientific data.
• Logical and critical thinking.
• The ability to analyze and solve complex problems.
• Strong written and oral communication skills.

Potential Occupations
Graduates with licensure in secondary science education will find a strong demand for high school and junior high/middle school teachers in Colorado and elsewhere in the nation. In addition, these graduates will also have the background required for graduate science education programs.

With proper planning, physical science graduates can meet requirements for professional schools (e.g., medicine or law) or graduate programs in the basic or applied sciences. Internships and volunteer activities can provide practical training and experience.

Secondary Education
The Bachelor of Science in Natural Sciences provides the scientific subject matter, education classes, and the classroom experience required for secondary science education licensure in Colorado.

Concentrations in the Natural Sciences major include: Biology Education, Chemistry Education, Geology Education, and Physics Education.

Major in Natural Sciences, Physical Science Concentration

The Physical Science concentration begins with two semesters each of calculus, chemistry, and physics, plus a semester of biological science. Students then complete the major by earning two minors selected from Biochemistry, Chemistry, Computer Science, Geology, Mathematics, Statistics, or Physics. Completion of the double minor gives an unusual breadth in the physical sciences. Recent graduates have pursued careers in the sciences. Others use this background as a basis for graduate work and research or for entry into medical or veterinary professional programs.

Research
NSCI 698 Research Experience in Natural Sciences | 6 |

Program Total Credits: 30-31

1. The independent study requires enrollment in the summer session after completing the program's course requirements. It involves weekly meetings of the student with her/his research advisor, but does not require full-time residency on campus.

2. The research experience requires full time enrollment in the summer session after completing the program's course requirements. Instructors are graduate student advisors who hold regular faculty appointments in the Departments of Biology, Chemistry, or Physics.

Professional Science Master's in Natural Sciences, Biological Data Analytics Specialization

The Professional Science Master's (PSM) program with a specialization in Biological Data Analytics is a graduate degree program that was designed in coordination with leaders in the biotechnology industries in order to ensure that students will have the scientific, business, and communication skills required to be competitive for jobs in these industries. Students will develop skills that will allow them to analyze data from genomic, transcriptomic, proteomic, and metabolomic studies to find statistically relevant information, while interfacing with biologists in data interpretation and experimental design.

Requirements

Major in Biochemistry

As the name suggests, biochemistry links biology and chemistry. Biochemistry is most simply defined as the chemistry of living systems. It is the science that tries to explain how “lifeless” molecules work together to make “living” organisms. The methods of chemistry and molecular biology are used to study the structure and behavior of the complex molecules found in biological materials and the ways these molecules interact to form cells, tissues, and whole organisms. Biochemistry provides the basis for advances in human and veterinary medicine, agriculture, and biotechnology. Biochemists may participate in interdisciplinary research and development projects alongside chemical engineers, biologists, microbiologists, agronomists, physicians, and other professionals. They investigate the molecular mechanisms of such diseases as AIDS, diabetes, cancer, heart disease and stroke, and develop solutions to environmental problems through biotechnology.
The Biochemistry major provides a student with a strong, well-balanced background in the biological, physical, and mathematical sciences. As a Biochemistry major, studies include macromolecular structure and function; cellular biochemistry; metabolism; gene expression, DNA and protein structure, DNA replication and repair; cell organization, communication, growth, aging, and death. Students are also required to take courses in physics, organic chemistry, and statistical measurements and methods used in research. Independent study and internships (typically during the junior and senior years, but could start in the freshman year) provide opportunities for experiential learning and working closely with the faculty, sometimes leading to authorship of original publications.

**Learning Outcomes**

Students will be able to:

- Describe the basic concepts of chemistry, biology, biochemistry, molecular biology, and cellular biology
- Critically analyze, and present the methods, results, and conclusions of scientific papers in the current biochemical literature, and orally present technical material in a clear and comprehensible form
- Use a variety of laboratory instruments and techniques, interpret experimental results, and design new experiments
- Demonstrate the ability to perform original research in biochemistry and molecular biology

**Potential Occupations**

Possible career opportunities include, but are not limited to: process research technician, production/quality assurance lab technician, biomedical/pharmaceutical researcher or salesperson, molecular biologist, biophysicist, cytologist, toxicologist, crime scene investigator, industrial hygienist, dairy technologist, environmental analyst, hygienist, chemist, wastewater treatment chemist, food and drug inspector, museum technician, teacher, writer, fisheries biologist, research analyst, and medical or clinical lab technologist. Many biochemistry majors go on to earn higher degrees in graduate school or health care related professional schools, leading to careers in medicine, veterinary medicine, pharmacy, or law.

**Concentrations**

- ASBMB Concentration (American Society for Biochemistry and Molecular Biology)
- Health and Medical Sciences Concentration
- Pre-Pharmacy Concentration

**Major in Biochemistry, ASBMB Concentration**

The American Society for Biochemistry and Molecular Biology (ASBMB) concentration in Biochemistry is composed of a "core" set of courses comprised of 24 credits of primarily upper division coursework (22/24 credits are 400 level), along with a total of 9 "bioscience elective" credits selected from a list provided by the department. This option gives the student 13 "free elective" credits, which they can use to pursue a minor, a double major, and/or other academic interests. Thus, this concentration is designed to provide a broad background in biochemistry and can be tailored to meet the individual needs of specific students. The ASBMB concentration is recommended for students considering teaching and/or research as a career. Students who graduate from this program can state on their resume that they graduated from an "ASBMB program." If desired, students can take a 1-hour ASBMB exam during the spring semester of their senior year. Students who pass the exam will additionally receive degree certification from ASBMB. Accreditation (and certification) by ASBMB confirms that our undergraduate degree program meets very high standards, and thus will enhance the credentials of our graduating seniors.

**Requirements**

**Effective Fall 2020**

A minimum grade of C (2.000) must be earned for BC 493 and all biochemistry (BC) and LIFE subject code lecture and laboratory courses at or above the 200-level required in the biochemistry major.

1. Select from the list of courses in categories 3B-3E (six credits [two courses must come from 3B; one course each from categories 3C, 3D, and 3E) in the AUCC. Only 3 of the 6 credits required for Arts and Humanities may come from intermediate (L*** 200 and L*** 201) foreign language courses.

2. Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

Major in Biochemistry, Health and Medical Sciences Concentration

This concentration augments the ASBMB Concentration with additional coursework in anatomy and physiology, biochemistry of disease, and either a medical internship or mentored research by requiring an additional 14-15 credits of concentration-specific coursework. The Health and Medical Sciences concentration is geared toward students interested in a number of health professions including, but not limited to, medicine, veterinary, dentistry, physician assistant and physical therapy.

**Requirements**

**Effective Fall 2020**

A minimum grade of C (2.000) must be earned for BC 493 and all biochemistry (BC) and LIFE subject code lecture and laboratory courses at or above the 200-level required in the biochemistry major.

If students successfully complete an additional 1-credit course, Responsible Conduct in Biochemical Research BC 360, they can state on their resume that they graduated from an "American Society for Biochemistry and Molecular Biology (ASBMB) accredited program."

Further, students also have the option of taking a 1-hour ASBMB exam during the spring semester of their senior year. Student who pass the exam will additionally receive degree certification from ASBMB.

Major in Biochemistry, Pre-Pharmacy Concentration

This concentration augments the ASBMB Concentration with additional coursework in physiology, microbiology, immunology, economics and public speaking. This concentration fulfills the prerequisite courses for admission to most pharmacy schools. It is also an appropriate concentration for a career as a medical technician.

### Requirements

**Effective Fall 2019**

A minimum grade of C (2.000) must be earned for BC 493 and all biochemistry (BC) and LIFE subject code lecture and laboratory courses at or above the 200-level required in the biochemistry major.

If students successfully complete an additional 1-credit course, Responsible Conduct in Biochemical Research BC 360, they can state on their resume that they graduated from an "American Society for Biochemistry and Molecular Biology (ASBMB) accredited program." Further, students also have the option of taking a 1-hour ASBMB exam during the spring semester of their senior year. Student who pass the exam will additionally receive degree certification from ASBMB.

Only 3 of the 6 credits required for Arts and Humanities may come from intermediate (L*** 200 and L*** 201) foreign language courses. Students should plan on taking ECON 202 as the AUCC Cat 3C requirement.

2 Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

TO PREPARE FOR FIRST SEMESTER: The curriculum for the Biochemistry major - Pre-Pharmacy concentration assumes students enter college prepared to begin a year-long calculus sequence (either MATH 155/MATH 255 or MATH 160/MATH 161) in the first semester of their first year. LIFE 102 requires high school chemistry as a prerequisite; CHEM 111 requires Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam).

A minimum grade of C (2.000) must be earned for BC 493 and all biochemistry (BC) and LIFE subject code lecture and laboratory courses at or above the 200-level required in the biochemistry major.

## Minor in Biochemistry

The minor in Biochemistry is valuable to students majoring in any biological or physical science, or in engineering. The minor requires a sound chemistry background, provides fundamental courses in molecular biosciences, and augments the latter with more specialized courses in biochemistry and molecular genetics.

### Requirements

**Effective Fall 2010**

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Major in Biological Science

Biology is the study of all living things—including microscopic bacteria and viruses, plants, and animals, and their relationship to their environments. Biology majors study the structure and function of cells, organ systems and tissues of animals and plants, ecology (the relationship between living things and their environment), animal behavior, genetics/genomics and evolution. They learn about physiology, behavior, genetics and heredity, aquatic systems, microscopic organisms such as bacteria, and techniques for diverse areas ranging from field research to biotechnology. This major provides a solid foundation of understanding the basic biological sciences. It also offers an opportunity to choose an area of emphasis within life sciences that relates to particular career goals (for example: the ecology of organisms, cell and molecular biology, biomedical professions, aquatic biology, marine biology, plant molecular biology for agricultural biotechnology and bioenergy, evolutionary biology, etc.).

Learning Outcomes

Students will:

- Interpret scientific data both mathematically and statistically.
- Demonstrate organizational and laboratory skills.
- Define scientific hypotheses and design experiments or observations to test them.
- Work effectively in groups.
- Demonstrate strong writing and oral communication skills.

Potential Occupations

Training in biology prepares students for a wide variety of occupations. Some involve daily interaction within teams; others can be done in relative isolation; some are highly focused, but most require knowledge far beyond the sciences. Career options related to biology include water quality assessments, field and lab technician work, biotechnology in biomedical sciences and agriculture, genetic research, agriculture, or sales (i.e., pharmaceutical, agricultural). Graduates work in small businesses, multinational corporations, academia, and government research laboratories and policy agencies. A degree in biological science offers a broad foundation for professional degrees in nursing, dental, medical or veterinary school, and a number of health professions such as physician’s assistant, physical therapy, occupational therapy, optometry or public health. Graduates often pursue advanced degrees in life sciences to carry out basic research or advance into leadership positions in industry. Participation in internships and/or laboratory research experience is highly recommended and strongly encouraged by the department to enhance practical training and development.

Combining biology with additional skills can lead to exciting careers. Biology and computer science can be linked to the ever-expanding and exciting area of bioinformatics. Biology and writing can be incorporated into a career as a technical writer or science fiction novelist. Biology and visual arts combine in medical and scientific illustration. Biology and other humanities may lead to studies of the history of science or medicine. Work in both biology and philosophy/religion can be incorporated in careers in bioethics. Biology is linked with psychology for the neuroscientist or genetic counselor. Study biology and political science to work in environmental law or be a patent lawyer in biotechnology. Try mixing biology and business to get into hospital administration, small business or biotechnology administration. Specialized master’s degrees are designed for many of these unique career paths.

Some career opportunities include, but are not limited to: aquarium, zoo, and museum worker; assistant research scientist; research technician in industry or university laboratories; biology photographer; biotechnologist; brewery laboratory assistant; consumer product researcher; marine bacteriologist, field ecologist; nuclear medicine technician; park naturalist; pharmaceutical researcher or salesperson; public health officer; science librarian; environmental educator, health specialist, or impact specialist; fisheries biologist or conservationist; industrial hygienist; occupational therapist (with a master’s degree); and medical or clinical laboratory technologist.

Major in Biological Science, Biological Science Concentration

The curriculum includes a two-semester introductory biology sequence, cell biology, developmental biology, ecology, evolution, and genetics. Required courses in the physical sciences include a minimum of one year in introductory chemistry and in physics (with labs), and at least one course in organic chemistry (with lab), and one in biochemistry. A calculus course and a statistics course are also required. In addition, students choose a selected field of 12 credits in one of the following: anatomy/physiology, aquatic biology, behavioral biology, cellular/molecular and genetic biology, ecology, evolution/genetics, and systematics, microbiology, or integrative organismal biology. There is an additional requirement of one course in two other fields, which assures a broad base of study.

Requirements

Effective Fall 2020

To be qualified for graduation, students in the Biological Science major must have a minimum grade of C- in each of their biological, physical science, and mathematical courses used to meet requirements for the major. This applies to courses taken as substitutions for meeting these requirements. The minimum scholastic average acceptable for graduation is 2.000 computed only for courses attempted at CSU.

Self-Designed Field

A student may, with the approval of their advisor and the Biology Curriculum Committee, define their own individual selected field. Students wishing to pursue this option should consult with their advisor to develop a proposal for a self-designed field. The proposal should include a description of the field of interest, the student’s reason or rationale for wishing to pursue a self-designed field, and a list of relevant classes (totaling 12 credits) to be completed. To be included, courses should be upper-division classes that are primarily biological in content. Once approved by the advisor, a student's request for a self-designed field must be submitted to the Biology Curriculum Committee for approval. The Curriculum Committee’s approval should be obtained before the end of the sophomore year.

Distinctive Requirements for Degree Program:

TO PREPARE FOR FIRST SEMESTER: The curriculum for the Biological Sciences major - Biological Sciences concentration assumes students enter college prepared to take calculus. Entering students who are not prepared to take calculus will need to fulfill pre-calculus requirements in the first semester. LIFE 102 requires high school chemistry as a prerequisite; CHEM 111 requires Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam). Earned grade of C or better is required in each of their biological, physical science, and mathematical courses used to meet requirements for the major. Semester 4 may have to be adjusted if the student chooses 2 semesters of Organic Chemistry. The selected and additional field must be a minimum of 18 credits. Do not attempt BZ 310 and BZ 350 before Junior year. Do not take BZ 310 and BZ 350 together.

### Major in Biological Science, Botany Concentration

Botany is the general study of plants and plant-like organisms from microscopic algae to giant redwoods, from mushrooming fungi to flowering angiosperms. Plant anatomy, how plants grow and develop, and how they survive and interrelate within their environments are topics of study. For students who like the outdoors, a career in plant ecology, taxonomy, or forestry might be appealing. Students attracted to the beauty and design of the microscopic world might enjoy a career in plant anatomy or plant developmental biology. Those interested in chemistry might enjoy plant biochemistry, molecular biology, or plant biotechnology. Those intrigued by plant diseases might become plant pathologists and the mathematically oriented might explore systems ecology, genetics, or plant biotechnology.

### Requirements

#### Effective Fall 2015

To be qualified for graduation, students in the Biological Science major must have a minimum grade of C- in each of their biological, physical science, and mathematical courses used to meet requirements for the major. This applies to courses taken as substitutions for meeting these requirements. The minimum scholastic average acceptable for graduation is 2.000 computed only for courses attempted at CSU.

Major in Zoology

Zoologists study animals—their origin, behavior, diseases, and life processes. Some experiment with live animals in controlled or natural surroundings while others study the structure and function of animal cells, tissues, and organ systems. Some zoologists go on to study veterinary medicine. Zoologists participate in research that has practical outcomes in farming, medicine, pharmacy, wildlife conservation, and pest control. Zoology encompasses many specialties. At CSU, students may focus on general training in animal biology or choose a concentration in the following areas: animal behavior, development, aquatic biology, ecology (how animals adapt to their environments), genetics and evolution, invertebrate organisms, cellular/molecular biology and physiology, systematics, and morphology of vertebrate organisms.

The curriculum is designed to provide a basic understanding of zoology through a variety of laboratory experiences in combination with the study of basic theories and defining concepts. The program encourages flexibility, strength, and depth. The course work includes a two-semester introductory biology sequence, one course each in invertebrates and vertebrates, and courses in evolution and ecology. Required courses in the physical sciences include a minimum of one year of introductory chemistry and at least one course in organic chemistry, two courses in physics (all with labs) and one in biochemistry. A course each in calculus and statistics is also required. In addition, students select a minimum of 15 credits of Zoology courses in their chosen areas of concentration.

Learning Outcomes

Students will:

• Interpret scientific data.
• Demonstrate strong organizational and laboratory skills.
• Define scientific hypotheses and design experiments to test them.
• Work effectively in groups.
• Demonstrate strong writing and oral communication skills.

Potential Occupations

This major prepares students to work in various areas of zoology, such as research or private industry, or to begin graduate school or professional studies. Career opportunities include medical biotechnology, research technician, protective agencies such as shelters and refuges, trainers and handlers, animal-related business, aquatic/marine biologists, exotic animal specialists, and wildlife conservation. It is an appropriate major for students planning to attend medical or veterinary school. Graduates often pursue advanced degrees to carry out basic research or advance into leadership positions in industry. Participation in internships, laboratory, or research opportunities is highly recommended and encouraged by the department to enhance practical training and development.

Additional careers for Zoology majors include, but are not limited to: aquarium and museum curator/director; zoo keeper, animal trainer and instructor; science librarian, environmental technician, fish and wildlife technician, veterinary technician/assistant, marine bacteriologist or biologist or ecologist, humane society positions, cytotechnologist, ecologist, fisheries biologist or conservationist, laboratory technician, marketing researcher, medical technologist, park ranger, pharmaceutical sales representative, production supervisor, quality analysis technician in food or pharmaceutical industry, radiation protection technician, research technician, industrial hygienist, wildlife photographer.

Requirements

Effective Fall 2019

To be qualified for graduation, students in the Zoology major must have a minimum grade of C- in each of their biological, physical science, and mathematical courses used to meet requirements for the major. This applies to courses taken as substitutions for meeting these requirements. The minimum scholastic average acceptable for graduation is 2.000 computed only for courses attempted at CSU.

Major Completion Map

Distinctive Requirements for Degree Program:

To prepare for first semester: The curriculum for the Zoology major assumes students enter college prepared to take calculus. Entering students who are not prepared to take calculus will need to fulfill pre-calculus requirements in the first semester. LIFE 102 requires high school chemistry as a prerequisite; CHEM 111 requires Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam). Earned grade of C or better is required in each of their biological, physical science, and mathematical courses used to meet requirements for the major. Term 5 may have to be adjusted if the student chooses 2 semesters of Organic Chemistry. Do not attempt BZ 310 and BZ 350 before Junior year. Do not take BZ 350 and BZ 310 together.

Major in Chemistry

Chemists study the atomic and molecular structure of physical matter and analyze how it changes. More specifically, they investigate how basic atomic and molecular components are combined and can be manipulated to produce useful or improved products. They also develop methods to measure atomic and molecular properties and their interactions, enabling insight into a range of processes from mining to clinical diagnostics.

Chemistry majors develop a solid foundation in general chemistry and mathematics followed by course work in organic chemistry, analytical chemistry, physical chemistry, inorganic chemistry, biochemistry, and physics. The curriculum is rounded out by courses in the liberal and communications arts.

Chemistry majors are encouraged to participate in undergraduate research. Ample opportunities exist for undergraduate students to become involved in ground-breaking research in the laboratories of individual faculty members. Students have access to state-of-the-art equipment in faculty laboratories and the Central Instrument Facility including NMR, FTIR, UV/Vis, fluorescence, and mass spectrometers, vacuum lines, x-ray diffractometers and many more. Undergraduate research is strongly encouraged for any student considering a career in chemistry and many students complete supervised research for academic credit.

Learning Outcomes

Chemistry students will:

- Organize, critically evaluate, and present chemical information coherently through oral and written discourse
- Upon obtaining a Bachelor of Science degree in chemistry, demonstrate contemporary skills and knowledge necessary for entry-level positions in chemical industry and allied fields, or for admission to a graduate or professional school
- Demonstrate original research skills, namely the ability to plan investigations allowing them to resolve research questions, conduct such theoretical and/or laboratory experimentation, solve problems arising in such situations and interpret and communicate results

Potential Occupations

Chemists are employed in a vast array of professional fields in private industry, government, and education. Chemists work in research and development, analysis and testing, consulting, industrial quality control and assurance, environmental resource management, and forensics. Principal employers are petrochemical firms, biotechnology firms, consumer chemical firms, environmental testing laboratories, pharmaceutical companies, agricultural companies, governmental regulatory agencies, governmental and educational research laboratories, and manufacturing firms. Many chemists are also engaged in startup companies. Chemistry is also an excellent major for those preparing for careers in veterinary medicine and the health professions. Students whose career goals involve teaching at the secondary school level have the opportunity to complete the teacher licensure program through the School of Education (http://soe.chhs.colostate.edu/).

Many possible occupations for chemists include, but are not limited to: agricultural chemist, air and water quality analyst, biochemical technician, chemical sales and marketing representative, clinical chemist, consultant, educator, forensic analyst, laboratory technician/bench chemist, materials analyst, patent examiner, pharmaceutical chemist, polymer technician, technical writer, and toxicologist.

**Distinctive Requirements for Degree Program:**

TO PREPARE FOR FIRST SEMESTER: The curriculum for the new American Chemical Society Certified Chemistry major assumes students enter college prepared to take calculus. Entering students who are not prepared to take calculus will need to fulfill pre-calculus requirements in the first semester. CHEM 111 and CHEM 120 require Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam). Earned grades of C (2.000) or better are required in all listed courses for the major in chemistry.

Chemistry Major Completion Map

**Distinctive Requirements for Degree Program:**

To prepare for first semester: The curriculum for the Chemistry major - ACS Certified concentration assumes students enter college prepared to take calculus. Entering students who are not prepared to take calculus will need to fulfill pre-calculus requirements in the first semester. CHEM 111 requires Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam). Earned grades of C or better are required in all listed courses for the major in chemistry.

### Notes:

1. CHEM 499 Senior Thesis by department approval. Students fulfilling the AUCC 4C requirement with CHEM 499 must write a thesis and present it to the department.
2. Select additional Advanced Science Electives courses (upper-division, 300- to 400-level) to total at least 10 credits when combined with the choice of BC 351 or BC 401 in the junior year.
3. Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

1. Select from the list of courses in category 3A of the All-University Core Curriculum (AUCC) with BZ or LIFE subject codes. Must include a lab.

2. Select additional advanced science courses (upper-division, 300- to 400-level) to total at least 18 credits when combined with Group A or Group B in the Junior year.

3. Additional mathematics: 300-level MATH, CS, or STAT course.

4. CHEM 499 Senior Thesis by department approval. Students fulfilling the AUCC 4C requirement with CHEM 499 must write a thesis and present it to the department.

5. Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300- to 400-level).

### Major Completion Map

**Distinctive Requirements for Degree Program:**

**To Prepare for First Semester:** The curriculum for the Chemistry major - Non-ACS Certified concentration assumes students enter college prepared to take calculus. Entering students who are not prepared to take calculus will need to fulfill pre-calculus requirements in the first semester. CHEM 111 requires Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam). Earned grades of C or better are required in all listed courses for the major in chemistry.

Minor in Chemistry

The Department of Chemistry offers a minor in Chemistry to interested students from other disciplines. The program serves to broaden the academic background of students seeking employment in fields related to chemistry.

Requirements

Effective Fall 2020

A minimum grade of C- is required in all of the courses required for the minor.

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

Major in Computer Science

Computer science is about creating innovative solutions to complex, real-world problems. Students in this major study step-by-step computational methods for solving problems by encoding, storing, tracking and transforming information. Computer science is much broader than just programming. It is informed by the theory and architecture of computing devices, and the tools and practices used to design and implement software.

The computer science major at CSU provides students a broad background in the field while simultaneously allowing students to focus on specific areas. In addition to a general computer science degree with the option for a minor in a field of their choice, we offer the following concentrations:

- Artificial Intelligence and Machine Learning
- Computing Systems
- Human-Centered Computing
- Networks and Security
- Software Engineering

The department offers a wide range of specialized senior-level courses where students can explore in depth different areas of computer science including: big data, computer networks, distributed systems, artificial intelligence, machine learning, computational biology / bioinformatics, human-computer interaction, graphics, database systems, compilers, parallel programming, object oriented design, and advanced topics in algorithms and theory of computer science.

Learning Outcomes

Upon completing this program, students will be able to:

- Understand how to use the principles of computing to design and develop software and computing systems.
- Work effectively in teams to develop computational solutions to complex problems.
- Communicate technical ideas effectively in writing and verbally.
- Practice CS in an ethical and socially responsible manner, with an awareness of biases that can result from their indiscriminate use.
- Confidently pursue graduate studies or professional employment in the field of computer science.

Potential Occupations

Our computer science students and graduates are in high demand. Their proven performance attracts annual recruiting visits by industry, government agencies, and research laboratories. Internships are readily available to enhance students’ skills and marketability.

Career opportunities for computer science graduates include:

Software developer, database programmer, computer systems analyst, network architect, web developer, information security analyst, data scientist, computer and information systems manager, IT project manager, cybersecurity analyst, UX designer, cloud engineer, systems architect, mobile application developer, and educator.

Major in Computer Science, Artificial Intelligence and Machine Learning Concentration

Artificial intelligence (AI) and machine learning (ML) are about creating intelligent systems — systems that perceive and respond to the world around them. AI and ML systems are everywhere, in our cars and smartphones, and businesses of all sizes are investing in these areas.

The AI/ML concentration combines a rigorous computer science degree with coursework in AI, ML, and big data. This concentration also provides students the necessary foundational coursework and skills in math, statistics, and data science.

Learning Outcomes

Upon completing this program, students will be able to:

- Develop AI and ML approaches for complex real-world problems.
- Deploy high-performance computing tools for the analysis of large datasets.
- Use a broad range of AI and ML tools, techniques, and algorithms.
- Apply AI and ML tools in an ethical and socially responsible manner, with an awareness of biases that can result from their indiscriminate use.
- Communicate results of complex analyses verbally and in writing using appropriate visualization techniques.
- Confidently pursue graduate studies or professional employment in AI/ML and computer science.
Potential Occupations

In addition to the career opportunities open to all computer science graduates, the AI/ML concentration opens career paths that include:

- Machine learning engineer
- Data scientist
- Business intelligence developer
- Big data engineer
- Data mining analyst
- Natural language processing analyst
- Computer vision engineer

Major in Computer Science,
Computer Science Concentration

The Computer Science concentration is a broad computer science program that prepares students for any introductory position in the field. This concentration also allows students to select a research area (http://www.cs.colostate.edu/cstop/csresearch.php) and focus on that topic in their 400-level coursework. Students can also take a breadth focus – a little bit of everything – for a broader perspective.

Requirements
Effective Fall 2020
A minimum grade of C (2.000) is required in CO 150 and in all CS, DSCI, MATH, STAT and departmental Technology Focus Elective courses which are required for graduation.

Major in Computer Science,
Computing Systems Concentration

Computing systems are integrated devices that input, output, process, and store data and information. Computing systems encompass a wide range, from simple sensors and hardware components to phones, laptops, desktops, and entire data centers. Computing systems specialists are challenged to provide ever increasing levels of performance from these systems.

The Computing Systems concentration provides students the necessary tools to solve important and demanding systems problems at scale. Students will learn how to design and assess computer systems from a holistic perspective that encompasses distributed and parallel algorithms, big data, systems software, networking, compiler design, and artificial intelligence/machine learning.

Data is our most valuable resource. Large scale data are being generated by programs, sensors, and simulations. Drawing timely and effective insights from these data are at the heart of modern problems in computer science and society in general. The Computing Systems concentration includes courses that teach you how to accomplish this goal, from storing, transporting, organizing, and extracting insights from data to expressing programs that execute in parallel and distributed environments encompassing hundreds of thousands of cores.

Learning Outcomes

Upon completing this program, students will be able to:

- Design scalable systems for computational and data intensive problems.
- Design distributed and parallel algorithms to analyze large data sets.
- Leverage diverse computing architectures in support of problem solutions.
- Program accelerators/coprocessors (e.g., for deep learning).
- Confidently pursue graduate studies or professional employment in computer systems and computer science.

Potential Occupations

In addition to the career opportunities open to all computer science graduates, the Computing Systems concentration opens career paths that include:

Cloud applications designer, systems designer, data scientist, big data analyst, compiler designer, database specialist, and supercomputing applications specialist.

Requirements

Effective Fall 2020

A minimum grade of C (2.000) is required in CO 150 and in all CS, DSCI, MATH, STAT and departmental Technical Elective courses which are required for graduation.

Major in Computer Science, Human-Centered Computing Concentration

Human-centered computing (HCC) focuses on developing tools that improve the relationship between people and technology so that people can concentrate on the problem rather than the technology. The ultimate goal of HCC is to make the computer invisible.

Human-centered computing involves designing, developing, and deploying human-centric computer systems. In this concentration students will learn techniques for human-computer interaction using gestures, mobile devices, large surfaces, and virtual environments. Students will also learn how to design and conduct human-subject experiments and understand the role of HCC in developing human-centric artificial intelligence systems. The concentration provides rich interdisciplinary training in computer vision, machine learning, design and psychology.

Learning Outcomes

Upon completing this program, students will be able to:

- Design interactive systems using state-of-the-art HCC techniques.
- Design and conduct human-subject experiments.
- Build complex 3D worlds for user interaction (e.g., virtual and augmented reality).
- Confidently pursue graduate studies or professional employment in HCC and computer science.

Potential Occupations

In addition to the career opportunities open to all computer science graduates, the HCC concentration opens career paths that include:

User experience designer, virtual and augmented reality developer, and human-centric developer for intelligent systems.

Requirements

Effective Fall 2020

A minimum grade of C (2.000) is required in CO 150 and in all CS, DSCI, MATH, STAT and Human-Centered Computing Elective courses which are required for graduation.

**Major in Computer Science, Networks and Security Concentration**

Networks connect computers and other devices so they can share information. The Networks and Security concentration involves designing, building, and maintaining networks and protecting them from cyberattacks.

Network and security technology is vitally important to almost every modern field of human endeavor including biology, physics, agriculture, medicine, defense, and more.

There is explosive demand for professionals who can understand the underlying principles of networks and security, incorporate them into products and practices, and provide defensive capabilities against cyber threats.

The Networks and Security concentration provides students core and elective courses on computer networking, systems security (including the latest trends and technologies in cyber-security), ethical hacking, operating systems, databases, and software. Students will develop fundamental skills in security architecture and analysis, cryptography, system vulnerabilities and attack vectors, malware analysis and defense, intrusion detection and protection, network architecture, engineering and network software development. The CSU Cyber-Security Center of Excellence expands upon these course offerings with lab equipment, research topics, and certification opportunities.

**Learning Outcomes**

Upon completing this program, students will be able to:

- Work effectively in teams to develop computational solutions to complex problems.
- Develop products and technologies that provide network/cyber-security solutions or incorporate these technologies into products that require security or network capabilities.
- Analyze technologies and situations for cyber vulnerabilities to develop improvements to attack and defense methodologies.
- Communicate technical ideas effectively in writing and verbally.
- Confidently pursue graduate studies or professional employment in networks and security and computer science.

**Potential Occupations**

In addition to the career opportunities open to all computer science graduates, the networks and security concentration opens career paths that include:

Software developer, software architect, network security analyst, software project manager, computer systems security analyst, computer and information systems manager, and R&D jobs for both cyber-security attack and defense.

Employers in a wide range of fields recognize the need for network and cyber-security architecture and implementations within their domains, which creates R&D and management opportunities across a wide job market.

**Requirements**

**Effective Fall 2020**

A minimum grade of C (2.000) is required in CO 150 and in all CS, DSCI, MATH, STAT and departmental Technical Elective courses which are required for graduation.

**Major in Computer Science, Software Engineering Concentration**

Software engineering involves designing, implementing, and maintaining computer programs. Developing modern software systems requires more than programming skills and core computer science concepts. It requires software engineering skills, which are in high demand in the software industry.

The Software Engineering concentration focuses on the concepts, techniques, and tools necessary for software analysis, design, testing, maintenance, and teamwork. Courses will include hands-on work with the software engineering tools used in industry.

This concentration combines a rigorous computer science degree with courses in software design, software testing, project management, and system analysis and design.

**Learning Outcomes**

Upon completing this program, students will be able to:

- Work effectively in teams to develop computational solutions to complex problems.
- Communicate technical ideas effectively in writing and verbally.
- Confidently pursue graduate studies or professional employment in software engineering and computer science.

**Potential Occupations**

In addition to the career opportunities open to all computer science graduates, the software engineering concentration opens career paths that include:

Software developer, software architect, full-stack developer, software project manager, database programmer, computer systems analyst, web developer, computer and information systems manager, UX designer, cloud engineer, mobile application developer, and educator.

**Requirements**

Effective Fall 2020

Distinctive Requirements for Degree Program:

To prepare for first semester: The curriculum for the Computer Science major assumes students enter college prepared to take calculus. Entering students who are not prepared to take calculus will need to fulfill pre-calculus requirements in the first semester. All students must maintain a C (2.000) or better in CO 150 and in all CS, CIS, DSCI, MATH, and STAT courses which are required for graduation.

Colorado State University Catalog 1725
Minor in Computer Science

Computer science and programming skills are in high demand in every field. Most jobs now require them.

A minor in Computer Science will give students a foundation in software development, programming, and computer and information theory. Students will begin with a gradual introduction to programming and data structures. Then students can take courses in an area of emphasis that complements their current degree.

This customized minor can significantly boost student’s career opportunities and success.

Computer Science has competitive entrance requirements. Please contact a department advisor for more information.
Requirements
Effective Fall 2019

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

A minimum grade of C is required in all courses required for the minor.

Major in Mathematics

Mathematics is the science of numbers, shapes, probabilities, and measurements. It is a universal language in which information is stated in the simplest possible form. Mathematics has a dual nature—it is an independent discipline valued for its precision and elegance, and it is an essential source of ideas and techniques for other scientific endeavors.

The undergraduate program is structured to provide a broad liberal arts education in mathematics, a strong set of core courses, and flexibility to choose from a broad range of courses. The liberal arts component requires students to acquire a broad background in communication skills, humanities, social sciences, and natural sciences. The major core focuses on developing students’ understanding and appreciation of the mathematical sciences, problem solving skills, and their ability to combine knowledge and skills in productive ways. Core mathematics subjects include calculus and advanced calculus, linear algebra, methods of proof, abstract algebra, computer programming, and statistics.

Four concentrations are available in the program: Actuarial Science, Applied Mathematics, General Mathematics, and Mathematics Education.

Learning Outcomes

Graduates will:

• Obtain a solid background in theoretical mathematics and will be able to participate in mathematical work in a variety of fields or continue on to graduate school.
• Be able to apply a range of mathematical and statistical tools to a diverse set of problems as presented to them in either employment or the pursuit of further education.
• Be capable of describing their mathematical assumptions and results to colleagues.

Potential Occupations

The Mathematics major prepares students for a wide variety of occupations in business, industry, government, and education.

Actuarial science graduates who have passed the first two professional actuary exams can expect to find positions with excellent entry-level salaries. Applied mathematics graduates continue to find employment opportunities in government and private industry. Many pursue advanced degrees in mathematics, computational science, or engineering.

About one-third of general mathematics graduates continue on to graduate school in mathematics or other disciplines, with the rest finding employment in a large variety of capacities. Education students spend a semester teaching a classroom and have excellent job placement. Participation in internships, volunteer activities, or cooperative education opportunities is highly recommended to enhance practical training and development. Graduates who continue to pursue advanced degrees can attain more responsible positions with the possibility of rising to top professional levels.

Career opportunities include, but are not limited to: applied mathematician, actuary, engineer, statistician, financial analyst/advisor,
computer programmer, computer systems analyst, mortgage officer, market analyst, risk analyst, tax auditor, accountant, math educator.

**Concentrations**

- Actuarial Science Concentration
- Applied Mathematics Concentration
- Computational Mathematics Concentration (No new students are being accepted into this concentration.)
- General Mathematics Concentration
- Mathematics Education Concentration

**Major in Mathematics, Actuarial Science Concentration**

The Actuarial Science concentration trains students how to use mathematics, statistics, business, and economics to analyze and plan for future situations involving financial uncertainties and risks. This concentration is designed to qualify students to take the first two examinations administered by the Society of Actuaries (https://www.soa.org/member/) and provides the foundation for the remaining examinations.

**Requirements**

**Effective Fall 2020**

A minimum grade of C (3.000) is required in all mathematics, statistics, and computer science courses that are required for graduation.

**Major in Mathematics, Applied Mathematics Concentration**

The Applied Mathematics concentration prepares students for careers as applied mathematicians working in business, government, and industry. It is recommended that students supplement the core mathematical program with courses in their chosen application area; for example, engineering, public health, finance, electronics, or geology. Course requirements emphasize mathematical foundations as well as the application of mathematics in other disciplines. In particular, students receive training in numerical analysis, mathematical modeling, statistics, and computing, as well as a solid preparation for further study.

## Major in Mathematics, General Mathematics Concentration

The General Mathematics concentration is a liberal arts-based program designed to provide a solid foundation in mathematics with the flexibility to explore and develop expertise in other academic fields. Because of its flexibility, this concentration is well suited for students who want to combine mathematics with fields such as business, law, computer science, or statistics.

### Requirements

**Effective Fall 2020**

A minimum grade of C (2.000) is required in all mathematics, statistics, and computer science courses that are required for graduation.

**Major in Mathematics, Mathematics Education Concentration**

The Mathematics Education concentration is designed to prepare students to teach mathematics through the high school level, including Advanced Placement and International Baccalaureate courses. The program provides the subject matter, education classes, and classroom experience required for secondary education licensure in Colorado.

Students interested in pursuing a teaching license through CSU may refer to the Center for Educator Preparation (http://www.cep.chhs.colostate.edu/) and the School of Education for general information.

### Requirements

**Effective Fall 2020**

A minimum grade of C (2.000) is required in all mathematics, statistics, and computer science courses that are required for graduation.

**Distinctive Requirements for Degree Program:**

**TO PREPARE FOR FIRST SEMESTER:** The curriculum for the Major in Mathematics, Mathematics Education Concentration assumes students enter college prepared to take calculus. Entering students who are not prepared to take calculus will need to fulfill pre-calculus requirements in the first semester: MATH 117, MATH 118, MATH 124, MATH 125, MATH 126. A minimum grade of C (2.000) is required in all mathematics, statistics, and computer science courses that are required by the major.

Major in Physics

Physics is the study of motion, matter, and energy. It is the most fundamental of sciences, and provides the essential underpinning of chemistry, biology, astronomy, and geology. Physicists probe the structure of atomic nuclei, study exotic states of matter that occur at ultra-low temperatures, and develop theories that predict the origin and destiny of the universe. Physics has practical applications to a wide variety of tasks such as fabricating very large scale integrated circuits, producing high efficiency solar cells, and developing nanomachines, high-power lasers, and scanners for imaging activity within the human brain. Fundamental research in physics has led to many important inventions, including the transistor, the computer, the internet, the flat panel display, and the cell phone.

The Physics major begins with an emphasis on fundamentals in the basic sciences and mathematics to provide students with a broad foundation. Subsequent course work is designed to develop analytical and experimental abilities that allow students to solve problems involving the technical applications of physics. The curriculum includes courses on classical mechanics, modern physics, quantum mechanics, electricity and magnetism, and thermal physics. A strong liberal arts program rounds out the major and provides educational breadth. Participation in undergraduate research is strongly encouraged since it enhances practical training and expands employment opportunities, as well as being expected of anyone applying to research-based graduate programs.

Two concentrations are offered: Physics and Applied Physics. The former is the standard concentration, and is recommended for students planning to apply to graduate programs in Physics or related disciplines. The latter requires the student to select a specific field: there are a variety to choose from, and each has its own menu of associated electives. The Applied Physics concentration is ideal for students who are double-majoring in other technical disciplines, or who anticipate further education towards a career in health professions (including, notably, Medical Physics).

Learning Outcomes
Graduates will:

• Obtain a solid background in experimental physics and basic theoretical physics. This will include a conceptual understanding of mechanics, electromagnetism, many-body physics, and quantum mechanics as applied to important model systems and real systems.
• Have the contemporary skills and knowledge necessary for entry-level positions in a variety of occupations or for admission to graduate or professional schools.
• Be able to carry out experiments on diverse physics phenomena using electrical and optical techniques; analyze data using statistical methods appropriately; identify systematic errors; and relate the results to core physics content at the advanced undergraduate level.
• Be able to communicate the results of experiments and theoretical analyses in writing and orally.

Potential Occupations
Physics majors who go into the workforce directly after graduation use their training in a variety of settings. The primary employers for our graduates have been large aerospace/defense and electronics companies, as well as software firms and smaller high-tech companies. In addition to the more obvious jobs in those settings, such as computer programming, quality control, and electronics design, our students have also been hired in training and sales capacities. High school teaching is a possibility: there are several pathways for students with undergraduate degrees in Physics or related disciplines.

Our majors have gone on to research-based graduate programs in disciplines including Physics, Applied Physics, Applied Mathematics, Atmospheric Science, and Quantitative Biology. Those earning graduate degrees can work in college teaching and at industrial, government, and academic research labs and reach the highest professional levels.

Health Physics and Medical Physics are two less-known career paths that offer great opportunities for students interested in the direct application of physics to human well-being. The former is concerned with protecting people from dangers associated with ionizing radiation, while the latter involves working with x-ray machines and radioisotopes in clinical settings. Both require Master’s degrees in the discipline, and a Physics major is the preferred undergraduate preparation.

Concentrations

• Applied Physics Concentration
• Physics Concentration
Major in Physics, Applied Physics Concentration

The Applied Physics concentration combines fundamental course work in physics with a selection of courses in a related field. Seven fields are available:

- The Electronics, Semiconductors, and Optics field and the Materials and Fluids field are designed for students interested in rapidly changing technology or in areas that overlap the boundaries of traditional engineering disciplines.
- The Computers field provides a foundation for the application of modern computer technology to problems in physics, the development of new types of computers, and jobs in computer programming.
- The Chemistry field combines thorough knowledge of both chemistry and physics, which is useful in such interdisciplinary areas as materials science, surface science, and physical chemistry/chemical physics.

- The Medical Physics field and the Biophysics field prepare students for further study in medical physics (the application of physics technologies to medical practice), health physics (radiation safety and protection), or biophysics, and are also appropriate for students planning careers in traditional health professions.
- The Geophysics field prepares students for further study in geophysics and careers involving application of physical methods in geology.

With this concentration, it is also possible for students to design a custom field (in consultation with departmental advisors) to meet their specific needs.

Requirements
Effective Fall 2018

1 For students who change majors from Electrical Engineering or are double-majoring in Electrical Engineering, please see advisor for possible substitutions.

2 CHEM 301 or CO 301B are recommended. Other courses in AUCC Category 2 may be accepted if they are taken prior to declaring the Physics major or are taken to meet requirements of another major.

3 A minimum of 6 credits must be 300-, 400-, or 500-level.

4 Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300-, 400-level, or 500-level).

Major Completion Map

Distinctive Requirements for Degree Program:

Required PH courses above the 100-Level (with the exception of PH 293 and, if there is sufficient demand, PH 314) are offered only Fall or Spring, not both. A grade of C- or better is required in all courses used to meet requirements of the major, except for unrestricted electives and courses taken to satisfy All-University Core Curriculum (AUCC) categories 3B, 3C, 3D, and 3E. Many courses in a Selected Field list have prerequisites outside the Department of Physics. Any student considering the Applied Physics concentration should meet with an advisor as soon as possible. Note that PH 327 may be replaced by three credits from each of the two Technical Electives Lists.

Major in Physics, Physics Concentration

The Physics concentration provides a broad background in physics that serves as a base for later specialization, either in graduate school or on the job. It is designed for those seeking greater insight into physics and an introduction to more advanced topics and methods. Students who obtain a degree in Physics with the Physics concentration are prepared for a career in industry or government, or for advanced study at the graduate level.

Requirements
Effective Fall 2018

Each course used to meet requirements of the concentration need a minimum grade of C-, including courses to satisfy AUCC Categories 1, 2, and 3A.

1 For students who change majors from Electrical Engineering or are double-majoring in Electrical Engineering, please see advisor for possible substitutions.
2 CHEM 301 and CO 301B are recommended. Other courses in All-University Core Curriculum (AUCC) Category 2 may be accepted as substitutes if they are taken prior to declaring the Physics major or are taken to meet requirements of another major.
3 Select enough elective credits to bring the program total to a minimum of 120 credits, of which at least 42 must be upper-division (300-, 400-level).
4 Only 3 credits from this course are applied towards the Technical Electives requirement.

Major Completion Map

Distinctive Requirements for Degree Program:

Required PH courses above the 100-Level (with the exception of PH 293 and, if there is sufficient demand, PH 314) are offered only Fall or Spring, not both. A grade of C- or better is required in all courses used to meet requirements of the major, except for unrestricted electives and courses taken to satisfy All-University Core Curriculum (AUCC) categories 3B, 3C, 3D, and 3E. Note that PH 327 may be replaced by six credits from the Mathematics and Statistics Electives List.

Minor in Physics

Most technical fields require some background in physics. A minor in Physics can provide students with an increased understanding of the foundations of their chosen major. For students majoring in Computer Science and Mathematics, a minor in Physics can offer experience in applying the skills acquired in their major to concrete physical problems.

Requirements
Effective Fall 2018

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

A minimum grade of C- is required in all courses applying toward the minor in physics.

**Major in Psychology**

Psychology is one of the most popular and versatile majors. The major emphasizes a strong background in the natural sciences (e.g., mathematics, chemistry, biology, statistics, human physiology), writing, and research.

Electives enable students to obtain a second major or minor in a field of interest or take pre-professional courses and graduate with:

1. A combination of courses and experiences to qualify for semiprofessional jobs in psychological settings or closely-related fields (e.g., addictions counseling);  
2. A combination of courses providing a background for careers outside of psychology (e.g., human resources);  
3. Pre-professional courses for potential admittance into professional training programs (e.g., medicine, occupational therapy, veterinary medicine); and/or  
4. A complement of courses for potential admittance into psychology graduate school programs. Advanced degrees are often a prerequisite for professional careers in psychology.

**Learning Outcomes**

Students will:

- Demonstrate understanding of the basic theories and principles of behavior.  
- Demonstrate knowledge of psychological principles and concepts across several content areas.  
- Demonstrate knowledge and appreciation of the scientific methods used in psychological research by engaging in analytical and critical thinking.

**Potential Occupations**

A B.S. degree in Psychology prepares students for a variety of career opportunities. Because of the strong science orientation, students develop a number of important skills required in a broad range of occupations. Skills such as written and oral communication, cooperation, analytical and critical thinking, and a background in the sciences demonstrate versatility and an ability to pursue a variety of career paths. Participating in paid or volunteer work, internships, research, study abroad and experiential education opportunities are highly recommended to increase students' employment opportunities.

Possible career opportunities include, but are not limited to: addictions counselor, human services worker, case worker, mental health services worker, probation officer, community relations officer, educator, program developer/administrator, human resources administrator, labor relations representative, compensation and benefits administrator, public relations specialist/special events administrator, advertising producer/writer, account services representative, media representative, market researcher, government program administrator, business manager, buying agent, sales representative, real estate broker, industrial/organizational consultant, psychometrician, neuropsychologist (with advanced degree), cognitive neuroscientist (with advanced degree), engineering psychologist (with advanced degree), clinical psychologist (with advanced degree), family therapist (with advanced degree), lawyer (with advanced degree), occupational therapist (with advanced degree), veterinarian (with advanced degree) or physician (with advanced degree).

**Concentrations**

- Addictions Counseling Concentration  
- Clinical/Counseling Psychology Concentration  
- General Psychology Concentration  
- Industrial/Organizational Concentration  
- Mind, Brain, and Behavior Concentration
# Major in Psychology, Addictions Counseling Concentration

The Addictions Counseling concentration provides students with an undergraduate degree in psychology while completing the required courses for becoming certified addictions counselors (Level 1) in the state of Colorado. Besides coursework, students are required to complete internship hours at an approved facility. Students who are interested in the clinical/counseling field of psychology, but do not wish to seek an advanced degree in psychology, may find this an attractive concentration.

### Major in Psychology, Mind, Brain, and Behavior Concentration

The Mind, Brain, and Behavior Concentration prepares students to be competitive candidates for graduate programs in cognitive psychology, cognitive neuroscience, behavioral neuroscience, and sensation and perception. Many students considering a career in medicine or an allied health profession also choose to complete this concentration. Students acquire a stronger science and quantitative background compared to the other concentrations in psychology. Students are encouraged to participate as undergraduate research assistants and work with a faculty member on a research project.

Major in Statistics

Statistics is the science of modeling, summarizing, and analyzing data. Statisticians help people produce trustworthy data, analyze the data, and present the results in a useful manner. Statisticians work with people from other professional backgrounds to solve practical problems. They provide crucial guidance in determining what information is reliable and which predictions can be trusted. An exciting aspect of the field is the diversity of areas where statistical methods are used; this is one reason for continuing strong demand for well-trained statisticians. With the popularity of big data and the focus on quantitative analysis in many fields, there will continue to be a high demand for graduates with a statistics major or minor. Students who succeed in the field of statistics typically have strong quantitative skills, analytical minds, and like to help other people solve problems.

Learning Outcomes

Students completing this program will be able to:

• Conceptualize analytical questions in terms of a model,
• Apply their knowledge of the core set of statistical methods,
• Perform data analysis using statistical software,
• Interpret and communicate statistical results,
• Either attend graduate school in statistics or find professional employment in a statistics field upon completion of a statistics major.

Potential Occupations

Statisticians find employment in a wide range of industries including medicine (evaluating new medicines and medical treatments), computing, business, market research, natural resources, government, and more. Almost every industry has a statistician or a group of statisticians somewhere in the organization. Graduate school is another pathway after graduation. Many of our undergraduate majors have continued on to graduate school in statistics, either at CSU or other universities. Almost all statistics majors are able to find work in this field and/or gain entrance to graduate school after successfully completing a Statistics degree.

Concentrations

• General Statistics Concentration (No new students are being admitted to this concentration.)
• Mathematical Statistics Concentration (No new students are being admitted to this concentration.)

Requirements

Effective Fall 2020

A minimum grade of C (2.000) is required in each CS, DSCI, MATH, and STAT course required for the major.

Program Total Credits: 10

*This certificate may have courses in common with other graduate certificates. A student may earn more than one certificate, but a given course may be counted only in one certificate.

Graduate Certificate in Theory and Applications of Regression Models

The Graduate Certificate in Theory and Applications of Regression covers applications of regression analysis, generalized regression models, probability and mathematical statistics and other topics in statistical analysis. The focus is on the practical methods in regression analysis, understanding patterns and structure in data, and the explanation of findings.

Distinctive Requirements for Certificate: GSLL 3095 and GSLL 3096 (or STAT 500) are required skills courses and should be taken first. GSLL 3095 is intended not only as a review, but also as instruction in using the math skills in a statistical context. It does not replace the math prerequisites indicated. GSLL 3096 covers use of SAS and R programming. STAT 500 is a 1-credit version of GSLL 3096.

Effective Spring 2017

Additional coursework may be required due to prerequisites.

Master of Applied Statistics, Plan C, Data Science Specialization

The Master of Applied Statistics, Plan C, Data Science specialization emphasizes practical methods in statistics and data science, focusing on applications and computational aspects rather than theory. The goal of this degree is to enable students to start working as data scientists in business, industry, or government immediately after graduation. Students will receive a strong background in statistical and business computing while completing this degree. Full time students complete the M.A.S. degree in less than a year; however, this degree may also be completed part time, either online or on campus. Students who succeed in the field of data science typically have strong quantitative skills, analytical minds, and like to help other people solve problems.

Program Total Credits: 31

A minimum of 31 credits are required to complete this program.
environmental health sciences. Graduates of the College in either the veterinary sciences or the biomedical sciences serve society in the broadest sense: they represent the concept that there is but "one medicine" supporting "one health" with human and animal health intimately interrelated within their environments.

**Major Courses of Study**
The CVMBS offers undergraduate, professional, and graduate courses of study. There are four undergraduate programs leading to the Bachelor of Science, with majors in Neuroscience in partnership with the College of Natural Sciences, Biomedical Sciences, Environmental Health and Microbiology. The Bachelor of Science degree requires a minimum of 120 credits with a minimum of 42 credits in upper-division courses. The four-year professional veterinary medical program leads to the Doctor of Veterinary Medicine degree; students in this program typically complete a baccalaureate degree prior to program admission. Graduate studies in each of the four departments of the college lead to Master of Science and Doctor of Philosophy degrees with selected professional master's programs serving emerging needs in society and through practitioner skill development.

**Education Abroad**
Education abroad programs are available to students in the CVMBS. Because the knowledge of at least one other culture is valuable in understanding our own, students are strongly encouraged to study outside the United States. Students interested in education abroad should plan far in advance by discussing opportunities with their academic advisor and by visiting the Office of International Programs (http://international.colostate.edu) in Laurel Hall.

**Continuing and Distance Education**
The CVMBS supports the veterinary profession by offering continuing education courses that enable practicing veterinarians to obtain new medical information and meet the Colorado Veterinary Practice Act continuing education requirements for re-licensure. The College shares responsibility for continuing education and maintains close liaison with the American Veterinary Medical Association (AVMA), the Colorado Veterinary Medical Association (CVMA), the Colorado Board of Veterinary Medicine, and the Western Interstate Commission for Higher Education (WICHE). Innovative programs like Health Professions preparation—for students finishing essential courses to prepare to pursue health professions—are offered through CSU Online.

**Graduate Programs**
Programs leading to the Master of Science and Doctor of Philosophy degrees are offered in all departments of the College.

Students with Bachelor of Science or Doctor of Veterinary Medicine (DVM) degrees, or well-qualified students who are currently pursuing veterinary medicine degrees, are eligible to study for advanced degrees in the Departments of Biomedical Sciences; Clinical Sciences; Environmental and Radiological Health Sciences; and Microbiology, Immunology, and Pathology.

The CVMBS and the College of Business have created a combined five-year DVM-MBA program of study that can result in earning both the Master of Business Administration (MBA) degree and the DVM degree. Applicants to the DVM program are encouraged to consider extending their veterinary education to include a one-year start to an MBA degree. After successfully completing the first year of the MBA program, students will be guaranteed admission to the first year of the DVM program and will be expected to complete the remaining MBA course requirements concurrently with the first two years of the DVM curriculum. This program was undertaken to improve training of our students in veterinary practice management, business and economics beyond what is currently offered as core content within the DVM curriculum.

Combining the expertise from public/environmental health and veterinary medicine and partnering with the Colorado School of Public Health (http://publichealth.ucdenver.edu), the College has created a five-year DVM-MPH program which provides specialty training in veterinary medicine and public health. Students spend the first year in the Master of Public Health (MPH) program, years two and three jointly in the DVM and MPH programs, and then years four and five focusing on completing the DVM requirements. Given the threats to public health from zoonotic diseases, changing ecosystems due to climate, and enhanced need for health professionals versed in the interplay of human, animal and environmental factors, DVM-MPH graduates bring a critical skill set to bear on issues of significant public impact.

The CVMBS and the Department of Animal Sciences within the College of Agricultural Sciences have partnered in developing a DVM-MS-Animal Sciences five-year combined degree, aimed at offering robust training in livestock production, animal health, industry and economics to future livestock veterinarians. Students will be optimally equipped to provide animal health services, advise individuals within production units, provide leadership within professional organizations, and contribute to knowledge development through research. Students complete graduate coursework in Animal Sciences and initiate clinical/field research in the first year, then complete research requirements during the subsequent four years of DVM training.

There is a national need for veterinarians who can serve as the bridge between research and all aspects of animal health and welfare. The College has developed a seven-year DVM-PhD program that integrates clinical and research training to provide a dual degree to selected candidates. Numerous outstanding research opportunities exist in diverse areas that complement DVM training, including cancer biology, infectious disease, neurosciences, reproductive biology, epidemiology, orthopedic sciences, environmental health and toxicology. The typical DVM/PhD program progresses as follows:

- basic graduate study and laboratory rotations (year one)
- first two years of DVM training plus electives and graduate work (years two and three)
- exclusive research work in the PhD program (years four and five)
- completion of the DVM training (years six and seven)

For detailed information about CVMBS graduate programs, view the CVMBS (https://vetmedbiosci.colostate.edu/degree-programs/graduate/)(http://csu-cvmb.colostate.edu/academics/Pages/default.aspx) website. Information on DVM combined degrees may be viewed on the DVM Program (https://vetmedbiosci.colostate.edu/dvm/website).

**Interdepartmental Program**

**Doctor of Veterinary Medicine (DVM)**
A four-year professional Doctor of Veterinary Medicine (DVM) program is offered annually to approximately 148 students. Each year, approximately 138 students are admitted to the DVM program located on the main CSU campus in Fort Collins, Colorado. Additionally up to 12 students are admitted to the CU-University of Alaska Fairbanks (UAF) 2+2 DVM Program. These students complete the first two years of the four-year program in Fairbanks, Alaska, and join the larger cohort to complete years
three and four in Fort Collins. Students in the 2+2 Program graduate with a DVM degree from CSU, and enjoy unique opportunities at UAF in small animal sports medicine, rural outreach, conservation, and wildlife medicine.

Because the number of applicants exceeds the number of students who can be admitted to any class, the members of the DVM Admissions Committee for the CVMBS carefully evaluate each applicant in a holistic manner to recommend those best qualified. Information concerning the academic program which leads to the DVM degree may be found in the Graduate and Professional Bulletin or online (https://vetmedbiosci.colostate.edu/dvm/admission-requirements/).

The full course of study requires four years beyond completion of the pre-veterinary requirements. While exceptional students may complete pre-veterinary requirements in two to three years and then be accepted into the DVM Program, it is much more common that students complete a baccalaureate degree or graduate degree, followed by four years in the professional program.

**Pre-Veterinary Training for the Doctor of Veterinary Medicine Program**

Students may complete pre-professional (pre-veterinary) training at any accredited institution whether these courses are part of a regularly offered baccalaureate program or whether the courses are taken as “stand alone” choices independent of a degree program. Courses must be substantially equivalent in subject content and level as offered for pre-veterinary students at CSU.

Inquiries regarding equivalent or substitute courses that may be taken specifically to meet pre-veterinary requirements should be directed to DVMAdmissions@colostate.edu. There is also a form for requests (Prerequisite Substitute Course Request (https://vetmedbiosci.colostate.edu/dvm/admission-requirements/)), which is submitted to DVMAdmissions@colostate.edu.

The minimum course requirements for admission to the DVM program, exclusive of electives, are:

- Arts, Humanities, Behavioral and Social Sciences – at least 12 semester credits. (The required credits for English composition explicit in most programs of study as all university requirements—see category that follows—do not fulfill these requirements.)
- Biological Sciences – at least three semester credits in genetics and a laboratory associated with a biological science course.
- Chemistry – at least three semester credits in biochemistry (requiring organic chemistry as a prerequisite) and a laboratory associated with a chemistry course.
- English Composition – at least three semester credits.
- Physics – at least four semester credits with laboratory.
- Statistics – at least three semester credits (upper-division course preferred).

In addition to these minimum course requirements, 30 credits of elective courses are required. Highly recommended courses include anatomy, cell biology, developmental biology, histology, immunology, microbiology, nutrition, physiology, and computer science. These courses will enhance the student’s preparation for the DVM program.

The pre-veterinary requirements include a total of 60 semester credits that must be completed prior to admission to the DVM program. Students may apply prior to completing all prerequisite requirements; however, in order to assure the most competitive application, one is encouraged to have the majority of the prerequisites completed at the time of application. The large majority of students will complete the pre-veterinary requirements as part of a baccalaureate program. Exceptional students may apply for admission to the DVM program when only the pre-veterinary requirements are met.

Students who wish to pursue pre-professional veterinary medicine training (sufficient to meet minimum requirements to apply to the CSU DVM Program) through courses offered at CSU as part of their undergraduate degree program will find detailed information online (https://vetmedbiosci.colostate.edu/dvm/admission-requirements/).

**Combined Degree Programs**

Colorado State University offers four combined degree programs, pairing the DVM with a graduate degree. These include the DVM-MBA, DVM-MPH, DVM-MS-Animal Sciences, and DVM-PhD. Please see “Graduate Programs” above for detailed information.

**Food Animal Veterinary Career Incentive Program**

There are many vacancies and numerous career opportunities in all sectors of private livestock practice, including mixed animal practice and specialty practices in dairy cattle, beef cow-calf, beef feedlots, sheep, small ruminants and swine. There are also many opportunities in public practice including food safety and inspection, communicable disease management, and regulatory veterinary medicine. Many practitioners and producers have found it difficult to recruit new graduates into food and fiber animal practice, especially in rural communities. Reduced veterinary participation in food and fiber production animal medicine may contribute to increased vulnerability of livestock industries to emerging infectious diseases, exotic and zoonotic diseases, public health risks from food safety and quality problems, lowered public confidence in animal agricultural products, as well as threats to the national economy. Thus, the overarching goal of the Food Animal Veterinary Career Incentive Program (FAVCIP) is to create a sustainable source of future veterinarians for underserved disciplines and geographic regions central to the future of safe and successful food and fiber animal production. This program includes a plan of academic work, experience, and mentoring that encompasses undergraduate and veterinary medical education and meets specific needs of animal agriculture through a cooperative venture of the CVMBS and the Department of Animal Sciences in the College of Agricultural Sciences. It should be noted that DVM students who do not complete the FAVCIP may still focus coursework and clinical experiences on livestock medicine, especially in years three and four.

Undergraduate students with a strong interest in the discipline will be encouraged to follow the FAVCIP curriculum and program requirements (https://vetmedbiosci.colostate.edu/dvm/special-degree-programs/) as they complete their Bachelor of Science in Animal Science at CSU.

Major in Biomedical Sciences

The interdisciplinary Biomedical Science major (BMS) is designed to provide students in-depth training in the applied life sciences. The program prepares students for employment by public sector and government agencies, private industry, academic institutions, as well as graduate study in medicine, veterinary medicine, and related biomedical and health fields. Students will begin their studies with foundational science courses including biology, physics, general chemistry, organic chemistry, math, and statistics, and then choose an area of concentration (anatomy and physiology, environmental public health or microbiology and infectious disease) to tailor their educational experiences to specific career objectives.

The basic science curriculum meets many requirements for entrance into professional schools. Experiential learning opportunities are encouraged and could include participating in laboratory research, teaching/tutoring in selected courses, volunteer experiences and leadership positions within student club(s), study abroad, internships, and honors curriculum. These opportunities are encouraged with the student's interests and career goals as the focus.

Learning Outcomes

- Obtain a foundational knowledge in math and science and be able to integrate knowledge from the molecular to the systemic level
- Demonstrate critical thinking and the ability to analyze scientific data to solve complex problems as an individual and as a member of a team
- Demonstrate effective organization, leadership, and laboratory skills
- Demonstrate strong writing and oral communication skills necessary to communicate scientific knowledge to a range of audiences

Potential Occupations

A Bachelor of Science degree in Biomedical Sciences will provide students with a variety of opportunities for further study or employment in the broad area of biomedical sciences. The coursework is designed to prepare students for health-related graduate and professional programs. Post-graduate opportunities will include additional studies in specialty areas of physiology such as neuroscience, reproductive endocrinology, cardiopulmonary, and patho-physiology. Employment opportunities can be found in government at the local, state, and national levels; research in a variety of settings such as university, industry, and private laboratories; education; administration and management; and industry such as biotechnology, pharmaceuticals, and medical devices. Students will be exposed to skill sets which are necessary in a competitive, ever changing job market.

Concentrations

- Anatomy and Physiology
- Environmental Public Health
- Microbiology and Infectious Disease
Major in Biomedical Sciences, Anatomy and Physiology Concentration

This program prepares students for a wide variety of opportunities which have a basis in cellular and molecular biology, human/animal anatomy and physiology. In addition to enrolling in required courses, students will have opportunities to engage in elective courses and laboratory research in specialty areas of endocrinology, pharmacology, pathophysiology, neurophysiology, reproductive physiology, and cardiopulmonary physiology. In this process, students are able to tailor their educational experiences to specific career objectives. The curriculum will prepare graduates to pursue further studies in professional schools for medicine, veterinary medicine, pharmacy, dentistry, and optometry, as well as other programs such as nursing, physician assistant and physical therapy.

Major in Biomedical Sciences, Environmental Public Health Concentration

Environmental Public Health is a branch of public health that studies how biological, chemical, and physical factors in natural and built environments impact human health and disease. Students will learn how to prevent injuries and disease by managing environmental hazards and promoting healthier air, water, soil, homes, workplaces, and communities. The Biomedical Sciences major is one of only 30 programs nationwide to be fully accredited by the standards of the National Environmental Health Science and Protection Accreditation Council, and the only such program in Colorado.

The Environmental Public Health concentration prepares students for immediate employment in the public and private sector as well as graduate study in toxicology, epidemiology, industrial hygiene & occupational health, public health, and related biomedical and health fields. Options are available within the basic science requirements for the concentration that will meet admission requirements for accredited medical and veterinary medical schools in North America.

Students begin their studies with foundational science courses in biology, physics, general chemistry, organic chemistry, biochemistry, microbiology, physiology, math, and statistics, and then use these basic sciences as tools to solve environmental public health problems. Students are involved in actual and simulated field projects with data gathering and analysis, characterization of environmental public health problems, evaluation of alternative solutions, and presentation of results in written and oral formats. All Environmental Public Health students complete a professional internship for academic credit with a private sector company or public health agency.

Learning Outcomes
Students will:
• Effectively communicate the health consequences of actions, behaviors, or environmental degradation to the public, political community, legal experts, or the media
• Demonstrate critical thinking and problem solving abilities for environmental public health issues as an individual and as a member of a problem solving team
• Integrate knowledge in social, physical, and biological sciences to evaluate environmental public health issues
• Apply knowledge of scientific methods to evaluate compliance with environmental public health standards and assess risks to workers and the public

Potential Occupations
Career opportunities include, but are not limited to: environmental health specialist, public health specialist, industrial hygienist, toxicologist, epidemiologist, air and water pollution specialist, hazardous and
solid waste specialist, occupational safety specialist, environmental consultant, and health educator.

Major in Biomedical Sciences, Microbiology and Infectious Disease Concentration

Microbiology is the study of organisms, many of which are too small to be seen with the naked eye, including fungi, protists, and bacteria, as well as acellular agents such as viruses and prions. Microbiology emerged as a distinct science in the late nineteenth century, with the discovery that microorganisms are the cause of many infectious diseases, and that they play essential roles in ecosystems (such as the microbiome) and in industrial processes. Much work in this field is directed toward the cure, control, or eradication of disease in humans and animals, as well as understanding how microbes support health and life. Genetically engineered microorganisms can also be used for the production of improved foods, new drugs and vaccines, and for removing toxic wastes and spills from the environment. Unfortunately, some microbes have received considerable attention as potential agents of bioterrorism and biowarfare, and consequently much work is being done to counter such threats.

Students completing the undergraduate Biomedical Sciences degree program with a concentration in Microbiology and Infectious Diseases acquire knowledge and laboratory skills in the structure, physiology, genetics, pathogenicity, ecology, and taxonomy of microorganisms, as well as immunological techniques. Students engage in authentic hypothesis-driven research problems in inquiry-based laboratory courses. Required courses in biological sciences, chemistry, physics, and mathematics support the major. Ample opportunities exist for undergraduates to obtain laboratory research experience and many student researchers have presented at conferences and have been awarded research grants or fellowships.

A Bachelor of Science degree in Biomedical Sciences with a concentration in Microbiology and Infectious Disease prepares graduates well for continued education in a professional or graduate degree program or for employment in the field.

Learning Outcomes

• **Core Knowledge:** Students will apply and integrate the fundamentals of chemistry, microbial biology, and biochemistry and key principles from the following five core areas of the discipline: immunology, bacteriology, virology, microbial physiology, and microbial genetics.

• **Relevance/Impact:** Students will demonstrate an awareness of issues at the forefront of the discipline and will evaluate the important interaction between microbes and society, from their beneficial use in industrial, biotechnological, and clinical applications to their role as etiologic agents of infectious disease in humans and animals.

• **Communication Skills:** Students will assimilate factual and conceptual information and effectively communicate disciplinary knowledge to both science literate and general audiences through written or verbal presentations.
• **Laboratory Skills**: Students will demonstrate proficiency using microbiological and immunological laboratory techniques employed in clinical, industrial, and research laboratories, and will be able to explain the principles behind the procedures, employ mathematical computations, properly execute the procedures, interpret the results correctly, and analyze the results to draw a conclusion.

**Potential Occupations**

The curriculum, with the proper selection of departmental electives, meets the requirements for entrance into most professional programs in veterinary and human medicine, and is ideal preparation for students desiring a career as a veterinarian, physician, physician assistant, pharmacist, medical laboratory scientist, optometrist, or dentist. The degree also prepares students for graduate (PhD or MS) studies in various biological sciences, and also provides students with the knowledge and skills to go directly into a career. Career opportunities will continue to grow because microbiology is at the center of complex issues facing our world today, as well as at the forefront of fast-paced innovation and development. Employment opportunities exist in biotechnology (vaccine and therapeutics, pharmaceutical, food, beverage, and medical device industries); government public health agencies (CDC, FDA, and state and municipal health departments); and primary research institutions, such as universities.

**Distinctive Requirements for Degree Program:**

**To Declare Major:** competitive entry controls required and capped enrollment in place. Please contact Director of Student Success in the CVMBS Student Success Center for more information.

**To prepare for first semester:** The curriculum for the microbiology and infectious disease concentration assumes students enter college prepared to take MATH 124. Entering students who are not prepared to take MATH 124 will need to prerequisite requirements in the first semester. Those requirements are listed as benchmark courses in Freshman Semester 1 below. LIFE 102 requires high school chemistry as a prerequisite; CHEM 111 requires Algebra II as a prerequisite (this prerequisite is met by having Algebra II by test credit, transfer credit, or placement out of MATH 117 and MATH 118 on Math Placement Exam).

Major in Neuroscience

Molecular, Cellular and Integrative Neurosciences Special Academic Unit
mciin.colostate.edu/Undergrad (http://mciin.colostate.edu/Undergrad/)

Assistant Professor Phillip L. Quirk, Undergraduate Program Director
Office in:
Physiology 228
1680 Campus Delivery
970-491-6408

The Molecular, Cellular and Integrative Neuroscience Special Academic Unit offers an interdisciplinary undergraduate degree program with faculty in five different colleges and ten departments. Two different concentrations are offered as programs of study: Behavioral and Cognitive Neuroscience and Cell and Molecular Neuroscience. Both concentrations have a strong foundation in mathematics, physics, chemistry and biological sciences that utilize a common core for the first two years, differing in only a single course for each concentration, thus making it easy to switch between concentrations if a student’s interest changes during the first two years. Both concentrations require completion of an undergraduate thesis, providing significant opportunities for experiential learning in research laboratories in which they work closely with faculty, and which sometimes lead to authorship of original publications. Electives allow students in one concentration to acquire breadth and depth in the other area, if desired.

Learning Outcomes

Students will obtain:

- A command of basic concepts in chemistry, physics, biology, biochemistry, molecular biology, and cellular biology as well as a more in-depth understanding of the structure and function of the nervous system.
- An understanding of how the brain works, from molecules to the mind, and how its function becomes disrupted in diseases and following brain injury.
- The ability to critically analyze and present the methods, results, and conclusions of scientific papers in the current neuroscience literature, and orally present technical material in a clear and comprehensible form.
- Experience in the use of a variety of laboratory techniques, ability to critically interpret experimental results, and ability to design new experiments.
- The ability to perform original research or to critically analyze published work to advance an understanding of a specific area of neuroscience by preparing and defending an undergraduate thesis.

Potential Occupations

Possible career opportunities for students with a B.S. in Neuroscience include, but are not limited to: research technician, medical or clinical lab technologist, production/quality assurance lab technician, pharmaceutical research worker or salesperson, human resource specialist, neurotoxicology technician, teacher, writer, and research analyst. Many Neuroscience majors go to professional schools in medicine, veterinary medicine, or health sciences, or into graduate programs encompassing virtually all areas of biomedical sciences and psychology.

Concentrations

- Behavioral and Cognitive Neuroscience Concentration
- Cell and Molecular Neuroscience Concentration

Major in Neuroscience, Behavioral and Cognitive Neuroscience Concentration

Overview

The Behavioral and Cognitive Neuroscience concentration integrates an understanding of neuroanatomy with the mechanisms of sensation/perception and learning/memory, generally applied to human behavior. Its focus is at the functional level of neuronal systems and networks. It differs from classical psychology in providing a more in-depth cellular and molecular basis for understanding behavior and neurological disorders that influence behavior. Graduates with this concentration are well prepared for many graduate and professional degree programs in health professions, as well as for careers in a variety of clinical settings, non-profit disease oriented foundations, and private sector organizations in either research-related or human resource service-related positions.

Major in Neuroscience, Cell and Molecular Neuroscience Concentration

The Cell and Molecular Neuroscience (CMN) concentration integrates neuroanatomy with the cellular and molecular basis of nervous system function. Its focus is to understand cellular processes in neurons and glia at the molecular level. It differs from degree programs in biochemistry or biomedical sciences by its specific focus on the nervous system. Required courses in microbiology, immunology, biochemistry, and advanced cell biology provide an excellent background for students interested in pursuing careers in medicine or biomedical research through graduate or professional schools. However, graduates with this concentration should also be well qualified for any positions in academia, government or the private sector where knowledge of cell and molecular processes is required, whether or not it is applied to the nervous system.

Students in the CMN Concentration with strong research interests and a GPA of 3.250 or above may qualify for early entry into the M.S. degree program in Biochemistry while pursuing the B.S. degree program in Neuroscience. Early entry requires that students have identified a faculty member willing to mentor them in their laboratory research for the M.S. degree and that they have obtained permission from the Neuroscience program and the Department of Biochemistry and Molecular Biology to apply to the graduate school for this. Students can apply to the graduate program (allowing them access to courses above those at the 500 level) during the semester that they complete 90 or more credits. Students will be moved from undergraduate to graduate standing the semester after they complete 120 or more credits. At that time they begin paying graduate tuition and fees and will lose all undergraduate institutional and scholarship aid, but they can qualify for many graduate assistantships and fellowships. Both degrees can be awarded during the same semester but the M.S. degree cannot be awarded before completing the requirements of the B.S. degree.

Minor in Biomedical Sciences

The minor in Biomedical Sciences provides students with a useful complement to majors in Animal Science, Biochemistry, Biological Science, Health and Exercise Science, Human Development and Family Studies, Microbiology, Psychology, and other biomedical science areas. The program offers a variety of courses which serve to broaden the background of students pursuing professional careers in biomedical sciences, human and veterinary medicine, and a variety of health-related disciplines. Candidates begin the program with a course in physiology. The remainder of the required 21 credits is selected to complement the student’s educational goals and interests.

Requirements
Effective Fall 2018

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

A minimum grade of C (2.000) in either BMS 300 or BMS 360 will be required for those students who are seeking to graduate with a minor in biomedical sciences.

Master of Science in Biomedical Sciences, Plan A

The traditional Master of Science in Biomedical Sciences, Plan A (http://csu-cvmbs.colostate.edu/academics/bms/Pages/master-science-biomedical-sciences.aspx) is a research-based program and typically takes two to three years to complete. While less comprehensive than a Ph.D., students complete a meaningful and original research project, which culminates in writing and defending a thesis. This option is designed for motivated students who have the ability to develop critical thinking skills and conduct research in one of the three primary areas of study in our department (https://vetmedbiosci.colostate.edu/degree-programs/graduate/ms-biomedical-sciences/traditional-bms/): cardiovascular physiology, reproductive physiology, and neurobiology.

Master of Science in Biomedical Sciences, Plan B, Reproductive Technology Specialization

The Master of Science in Biomedical Sciences, Plan B, Reproductive Technology Specialization (http://csu-cvmbs.colostate.edu/academics/bms/Pages/one-year-masters-reproductive-technologies.aspx) is a one-year, non-thesis study of Assisted Reproductive Technologies (ART), culminating in a research project or internship. It provides students with in-depth laboratory training in in vitro embryo production based on a bovine model, including techniques such as in vitro fertilization, embryo and semen cryopreservation and vitrification, embryo biopsy and micromanipulation, and basic maintenance of an assisted reproduction laboratory and all associated equipment. The curriculum prepares students for careers in applied reproduction, especially careers in human or bovine embryology, as well as application to professional or graduate school. Visit the Department of Biomedical Sciences (https://vetmedbiosci.colostate.edu/degree-programs/graduate/ms-biomedical-sciences/assisted-reproductive-technologies/) for more information.

Ph.D. in Biomedical Sciences

The Ph.D. in Biomedical Sciences (https://vetmedbiosci.colostate.edu/degree-programs/graduate/phd-biomedical-sciences/) is research-based and typically takes five to six years to complete, culminating in writing and defending a dissertation. This option is more comprehensive in scope than the research-based master’s degree and is designed for motivated students who have the ability to develop critical thinking skills and conduct original research in one of the three primary areas of study in the Department of Biomedical Sciences (https://vetmedbiosci.colostate.edu/degree-programs/graduate/phd-biomedical-sciences/): cardiovascular physiology, reproductive physiology, and neurobiology.

Professor Wayne Jensen, Department Head

Faculty in the Department of Clinical Sciences participate in training professional veterinary medical students and graduate students. For the veterinary medical student curriculum, students are instructed in the diagnosis, medical and surgical treatment, and prevention and management of domestic and exotic animal diseases. Through field service clinical experience, students receive on-the-farm training in livestock herd health management and production medicine. Our major clinical training center is the Veterinary Teaching Hospital, which operates state-of-the-art primary and referral services in all areas of small animal medicine and surgery, equine, and agricultural animal clinical care.

### Undergraduate

No undergraduate major is offered.

### Graduate

Graduate programs offered in the department lead to Master of Science or Doctor of Philosophy degrees. Particular research focus areas within the department include epidemiology, musculoskeletal diseases, cancer...
biology, cardiovascular diseases, regenerative medicine, and infectious diseases of animals.

The department also offers a three-year combined master's degree and residency program in large and small animal surgery, anesthesiology, cardiology, dentistry, internal medicine, neurology, oncology, ophthalmology, dermatology, small and large animal sports medicine and rehabilitation, and emergency and critical care medicine. These training programs partially fulfill requirements for board certification in these specialties. Students interested in graduate work should refer to the Graduate and Professional Bulletin and the Department of Clinical Sciences (https://vetmedbiosci.colostate.edu/cs/).

### Graduate Certificate in Radiological and Nuclear Safety

The Department of Environmental and Radiological Health Sciences ([https://vetmedbiosci.colostate.edu/erhs/](https://vetmedbiosci.colostate.edu/erhs/))

This certificate allows opportunities for students and professionals (e.g., employed by the military or in the nuclear sector) who are interested in obtaining basic knowledge of radiological and nuclear safety for specific applications in their workplace to further their education and training in their individual sub-fields without having to complete the formal requirements of a comprehensive graduate degree. Completing the certificate allows the students to have this credential appear on their transcripts, which may serve as confirmation for their employer of their professional training. Also, credits earned in the course of completing the graduate certificate may be applied towards fulfillment of the requirements for a graduate degree at a later date.

#### Effective Fall 2019

Master of Science in Environmental Health, Occupational Ergonomics and Safety Specialization, Plan A

Department of Environmental and Radiological Health Sciences

The Master of Science in Environmental Health, Occupational Ergonomics and Safety Specialization, Plan A, is based on a multidisciplinary group of faculty and courses aimed at enhancing the workplace in terms of safety, process, and product quality, and the quality of work life. The foundation of the program is driven by the utilization of a systems approach in human-centered design and in the most current safety theories and practice. The program integrates a multidisciplinary approach from psychology, engineering, the health sciences, and safety to better understand and optimize human well-being and overall system performance in the workplace.

Graduates from this master’s program are typically employed as health and safety managers, ergonomic consultants, safety specialists, human factor specialists, and risk analysts. Companies hiring our graduates often include manufacturing companies, consulting firms, municipalities, universities, medical device companies, and insurance companies.

Master of Science in Radiological Health Sciences, Plan A, Health Physics Specialization

Department of Environmental and Radiological Health Sciences

Health physics is the discipline associated with using radiation for the benefit of society. This includes applying scientific as well as practical knowledge in order to obtain these benefits without unreasonable risks to humans or the environment. The profession has evolved into a necessary part of all programs that involve radiation, including anything from naturally occurring radioactivity to man-made sources of radiation. Sources of radiation range from naturally occurring radioactivity to reactors. Successful persons in health physics have broad backgrounds in physics, biology, and instrumentation, and have an understanding of risks and risk analysis.

Required course work is structured to provide a sound foundation in the basic skills essential to the health physics profession. Students may concentrate on specific areas of interest through a wide selection of elective courses. Formal course work is supplemented by extensive laboratory exercises, field trips, and research.

The M.S. in Radiological Health Sciences, Plan A, Health Physics Specialization is accredited by the Applied Sciences Accreditation Commission of ABET (https://www.abet.org/).

Ph.D. in Environmental Health, Occupational Ergonomics and Safety Specialization

Department of Environmental and Radiological Health Sciences

The Ph.D. in Environmental Health, Occupational Ergonomics and Safety Specialization is based on a multidisciplinary group of faculty and courses aimed at enhancing the workplace in terms of safety, process and product quality, and the quality of work life. The foundation of the program is driven by the utilization of a systems approach in human-centered design and in the most current safety theories and practice. The program integrates a multidisciplinary approach from psychology, engineering, the health sciences and safety to better understand and optimize human well-being and overall system performance in the workplace.

The Ph.D. program has the flexibility for students to pursue research related to ergonomics and safety from approaches in psychology, engineering, the health sciences, and occupational epidemiology. Graduates from the Ph.D. program are typically employed in leadership positions in the field of occupational safety and health. Many of our doctoral level graduates are professors at universities, program managers and directors at multinational companies, researchers at private and public organizations, as well as managing consultants in industry.

Major in Microbiology

Students are no longer being admitted to the Major in Microbiology. Please refer to the Major in Biomedical Sciences, Microbiology and Infectious Disease concentration or the College of Veterinary Medicine and Biomedical Sciences (https://vetmedbiosci.colostate.edu/degree-programs/undergraduate/).

Minor in Microbiology

A minor in Microbiology will be of considerable benefit to students majoring in biological science, natural science, food science, biochemistry, some fields of engineering, and other science-related fields.

The program is a good complement for graduates with an interest in food microbiology, immunology, medical microbiology and diagnostics, microbial genetics, or molecular biology. Additionally, some of the required and elective coursework overlaps with the interdisciplinary programs (IDPs) in molecular biology and food safety, and can be counted for both the minor and the IDP. Minors also complete classroom laboratories (MIP 302, which is required, and one additional elective lab from the approved departmental minor elective list).

Requirements
Effective Fall 2020

Students must satisfactorily complete the total credits required for the minor. Minors and interdisciplinary minors require 12 or more upper-division (300- to 400-level) credits.

Additional coursework may be required due to prerequisites.

The non-thesis Master of Science in Microbiology, Plan B is designed to strengthen the scientific academic portfolio of those seeking professional degrees and provide differentiating preparation for those seeking careers in industry. Students will work side-by-side one of the leading microbiology and immunology departments in the nation as they develop professional knowledge and skills.

With the growth of biotechnology and the increase in technology and specialization in applied microbiological sciences, there is a significant regional and national need for additional educational opportunities for individuals wishing to pursue a career in these industries. In addition, many students wish to pursue additional post-baccalaureate studies due to a variety of interests such as improved preparation for professional (medical, veterinary, D.O., etc.) schools or Ph.D. programs. The Department of Microbiology, Immunology & Pathology’s (https://vetmedbiosci.colostate.edu/mip/) M.S. in Microbiology, Plan B provides an excellent opportunity to meet these needs. As a recognized world leader in infectious disease basic and translational research with over $144 million in active extramurally funded research programs, including a good variety of translational efforts that interface with industrial partners, the MIP department is uniquely positioned in our region to effectively provide this training.

**Goals of the Master of Science in Microbiology, Plan B**

The overall goal of the program is to give each student a competitive advantage for their future career in industry or their admission into professional school. To develop this advantage, the program leverages your undergraduate education and training in life science and provides the advanced knowledge and skills required through:

1. A rigorous curriculum designed to provide cutting-edge knowledge in both theoretical and applied aspects of microbiology, virology, immunology, and molecular biology.
2. A strong emphasis on aspects of the discipline that will be useful in real world employment scenarios.
3. A well-rounded curriculum that includes the development of vital professional skills such as verbal and written communication, responsible conduct of research, and biosafety.
4. Active communication with regional and national representatives from the pharmaceutical, biotech, government, and public health sectors to ensure that the program’s curriculum remains pertinent and effective.
5. A high level of communication in the program to facilitate active mentoring, networking and career discussions, and access to take full advantage of the cutting-edge facilities and expertise available in the department.

GRADUATE AND PROFESSIONAL BULLETIN

The Graduate and Professional Bulletin is designed to provide post baccalaureate students and prospective students with the information which is most essential. It is not a comprehensive source.

A complete listing of graduate programs and degrees may be found by visiting the Graduate School (https://graduateschool.colostate.edu/programs/).

The policies and procedures in the Graduate and Professional Bulletin apply to all graduate students, except for Doctor of Veterinary Medicine (https://vetmedbiosci.colostate.edu/dvm/) (DVM) students.

CSU reserves the right at any time, without notice, to change, modify, or cancel any course, program, procedure, policy, financial requirement, or disciplinary arrangement set forth in this catalog whenever, in its sole discretion, it determines such action to be appropriate. Furthermore, CSU will not be responsible for any failure to present or complete any course or program or to perform any other activity, function, or obligation mentioned in this catalog. Since changes may occur at any time, students must check the relevant website (as noted throughout this catalog). Changes can be found on the Catalog Updates page.

CSU Student Conduct Code

The Student Conduct Code (https://resolutioncenter.colostate.edu/student-conduct-code/) exists to notify students, faculty, and staff of the specific expectations Colorado State University holds related to student behavior and the rights and responsibilities that accompany being a student and participating in student clubs or organizations.

Functions and Organization of the Graduate School

The purpose of the Graduate School is to promote high quality education and specialized training and to further the scholarly research and creative artistry with which such education is intimately linked. The advanced study necessary for graduate degrees requires the discovery of new knowledge, the original application or adaptation of existing knowledge, or esthetic contribution to the culture. Accordingly, graduate students perform research or do artistic work. Similarly, the faculty who are responsible for graduate education are themselves researchers or artists whose responsibilities include the transmission of their own creative skills and abilities to their students. The graduate educational mission of CSU and the research/artistic mission of CSU complement and reinforce each other and go forward in mutual interdependence.

Through the offering of the best graduate education available, CSU seeks to provide the skills and training necessary to a rapidly changing society and also to provide the basis for individual gratification and fulfillment on the part of its graduates.

Graduate degrees are awarded by CSU as an overall institution. Accordingly, CSU has specified that certain academic practices and procedures shall apply to all graduate degrees regardless of the departments and colleges in which study is undertaken. As is the case in most quality universities, some consistency of requirements has been found desirable. The Graduate School is the unit which applies and administers these requirements.

This activity involves several discrete kinds of functions. First, the Graduate School monitors all students’ progress through the entire graduate career, from sending out preliminary information on admissions to graduation. It maintains student records on application, admission, credits earned, formal programs of study, academic standing, progress toward the degree, and graduation. Additionally, it provides a regular flow of information to students and faculty regarding these practices so that the necessary steps can be taken as easily and conveniently as possible.

The Graduate School maintains an active liaison with students both on matters of overall interest and at the level of individual concerns. The former typically involves close contact with the Graduate Student Council, the campus-wide organization of graduate students, or its officers. The latter centers around matters which particular students raise as specific single cases.

The Graduate School collects and maintains information on the condition of the graduate educational mission of CSU. It concerns itself with institution-wide policies and practices that may affect this condition and will implement particular arrangements or make recommendations to the Faculty Council as appropriate.

Formal student involvement in the Graduate School proceeds through the Graduate Student Council. The Student Council consists of one student representative and one alternate from each department offering programs leading to advanced degrees. The Council elects its own officers and nominates graduate students for memberships on Faculty Council and Graduate School committees.

CSU’s graduate admissions program is designed to foster excellence in scholarship and promote diversity within the student population while assuring equal opportunity to all applicants.

The ultimate criterion for admission is applicant potential for attaining an advanced degree at CSU. However, the resources of CSU are limited and not all applicants who possess this potential can be admitted. Thus, selection is made taking into account a range of factors: past academic performance as indicated by transcripts of formal collegiate work, degrees completed, standardized examination scores (for example, the Graduate Record Examination or Graduate Management Admission Test), geographic residence, leadership qualities, recommendations
from qualified references, economic status, ethnic origin, and racial background.

CSU does not set quotas for people possessing particular ethnic, gender, or racial characteristics. However, the vitality of CSU and the quality of the educational experience to be enjoyed by all students depend in part on the existence of a diverse student population. Thus, CSU actively seeks applicants from many backgrounds and with diverse characteristics. The institution is committed to a truly heterogeneous University community.

**Application: U.S. Citizens or Permanent Residents**

Students apply online (http://gradadmissions.colostate.edu/apply/). In addition to the online application, a non-refundable application fee must be electronically submitted.

The on-line application will be electronically submitted to the Office of Admissions and then forwarded to the appropriate academic departments. With this system, most documents are uploaded directly by the applicant. Regarding letters of recommendation, recommenders will be notified and prompted to provide a recommendation letter through the online system. The letter of recommendation will be automatically processed and submitted to the student’s online file.

The following must be sent directly to the Office of Admissions at Colorado State University, 1062 Campus Delivery, Fort Collins, CO 80523-1062.

1. One official transcript of all collegiate work completed post-high school. Additionally separate transcripts are not required for study abroad credits if the GPA and credits are recorded on the transcript of the university that sponsored the study abroad experience. CSU transcripts are not required. Training course transcripts from branches of the U.S. military that show credit received with neither grades nor degrees awarded are exempt from the transcript requirement.
2. Test scores such as GRE or GMAT, if required by department, should be submitted with institution code 4075.
3. Any other materials that individual departments or programs may require of applicants.
4. Regardless of citizenship, applicants may be required to demonstrate proof of English language proficiency, if they do not have a degree from an institution where the primary language of instruction is English.

General deadlines for the receipt of complete applications are as follows: Fall Semester, April 1; Spring Semester, September 1; Summer Term, January 1. Please submit the on-line application and all supporting documents by the appropriate date. Note that individual departments may have earlier deadlines for certain programs. Please consult appropriate sections of this Bulletin or a department contact person. Applications completed later than these published deadlines may be considered depending on space and resources available. Late applications that cannot be considered will be updated by the Office of Admissions to a later semester or term. Except for Integrated Degree Program (IDP) Admissions, applications cannot be accepted more than fifteen months in advance of the term in which study is to begin.

Students who wish to be considered for fellowships, assistantships, or other forms of merit- or competency-based financial support may be subject to earlier deadlines. See Application for Financial Support.

The application fee is not refundable even if the application is withdrawn or admission denied, nor is it applied to tuition and fees if the applicant subsequently enrolls. The non-refundable application fee must be received by the Office of Admissions. Your application cannot be submitted until the fee is received.

Only persons with bachelor's degrees from colleges or universities accredited by one of the major regional accrediting agencies are eligible to apply. Degrees from schools which do not possess overall, institutional accreditation or which have only specialized accreditation cannot be accepted. This policy does not apply to admission for combined degree programs (CDPs, see Sequential Degree Programs), however, CDP students must earn their bachelor’s degrees prior to, or concurrent with, the award of their graduate degrees.

An undergraduate grade point average of 3.000 (A = 4.000) is required by CSU regulation for admission.

The various departments may have requirements in addition to or more stringent than those of CSU. Higher undergraduate grade point averages may be required, specific GRE minimum scores may be specified, or GRE advanced tests may be required, for example. Once again, applicants are strongly urged to contact the department in which they intend to study.

CSU may waive its 3.000 minimum undergraduate grade point average requirement under unusual circumstances or if the applicant is applying through Track II Admissions (see below). Applicants must present strong countervailing evidence that successful completion of a degree program is likely. Examples of the kinds of evidence that might be considered are high scores on the GRE aptitude test, high scores on the GRE advanced test, excellent letters of recommendation, relevant professional experience, and other indicators of exceptional motivation and performance. A positive recommendation by the department is required in such cases. Some departments may waive their specific requirements under similarly unusual and compelling circumstances. However, they are not required to do so and many cannot, due to space and resource considerations.

If the minimum GPA requirement is waived and the applicant is accepted by the Graduate School, the applicant will be provisionally admitted and placed immediately on academic probation. The student must achieve a term GPA of 3.000, averaged across all coursework that is traditionally graded (A through F), in the first semester, or the student will be dismissed from the Graduate School. This policy applies to all provisionally admitted graduate students.

Meeting the minimum CSU or department standards does not entitle an applicant to admission. Meeting such standards only insures consideration of the application. Since CSU cannot accommodate all who meet the minimum standards, it reserves the right to select individuals for admission on the basis of merit in such a way as to promote the best interests of CSU and the society as a whole and to maximize the potential for individual accomplishment.

Decisions made by the Graduate School to deny admission are final and not subject to appeal by the applicant.

Persons not seeking advanced degrees may be recommended for admission as non-degree students if space permits and if they meet the academic admission requirements. Advanced course work, research
experience, teacher recertification, and specialized training are among the objectives of students requesting admission in this category.

Students who have not been admitted to graduate study but who take courses on some other basis have no assurance that such courses will be acceptable in a degree program. Credits taken prior to admission to Graduate School may be allowed, but acceptance of any courses in a graduate degree program is at the discretion of the student's graduate committee and the Graduate School and will not be calculated in the student's GPA.

Courses taken by CSU undergraduates may, under certain circumstances, be subsequently credited toward graduate degrees at CSU. Undergraduates who enroll in 500-level courses which are not applied toward the bachelor's degree may request that an exclusion statement be placed on their academic records for no more than 9 credits. Students cannot exclude any courses below the 500 level under this policy. Courses at the 600 level are automatically excluded from use for an undergraduate degree.

A written request for exclusion must be filed with the Degree and Transfer Evaluation Unit of the Office of the Registrar, Centennial Hall, Room 100, no later than the end of the schedule change period of the term in which the excluded course is taken, or for Integrated Degree Program (IDP) students, excluded courses must appear on the formal program of study (GS form 6) filed during the first semester after Graduate School admission.

Permission to exclude courses from the bachelor's degree does not assure acceptance of this credit toward a graduate degree program. Both departmental and Graduate School approval is required at the time of filing the formal program of study.

Those with bachelor's or advanced degrees who desire to complete requirements for certification as teacher, administrator, counselor, reading specialist, or vocational certification must contact the School of Education. Individuals seeking professional certification in other areas must contact the departments concerned.

The submission of any false information or fraudulent documents in connection with the application process is grounds for rejection of the application or dismissal from the Graduate School regardless of the nature of other credentials.

Track II Admissions

Track II admissions are available only to individuals who have at least five years of appropriate professional experience following the award of a baccalaureate degree and whose undergraduate GPA is below 3.000.

The on-line application will be electronically submitted to the Office of Admissions and then forwarded to the appropriate academic departments. In addition to the on-line application and a non-refundable application fee that must be submitted, the following must be sent directly to the department in which the student plans to study (refer to the addresses in the Directory for Department and Program Contact Persons (http://graduateschool.colostate.edu/programs/)).

1. One official transcript of all collegiate work completed (CSU transcripts are not required). Training course transcripts from branches of the U.S. military that show credit received with neither grades nor degrees awarded are exempt from the transcript requirement.

2. Three letters of recommendation written by individuals in at least two of the following categories:
   a. Applicant’s previous or current college/university instructors.
   b. Applicant’s previous or current, immediate professional supervisors.
   c. Observers, other than supervisors, who can verify the specific impact of the applicant’s professional or intellectual expertise. Letters from friends, relatives, or character witnesses will be considered only supplemental to the three required references.

3. A written “statement of purpose” that contains:
   a. A summary of long-term professional or personal goals.
   b. A statement regarding the applicant’s educational goals.
   c. A statement indicating how this learning will contribute to the applicant’s long-term goals.
   d. A list of factors that led the applicant to consider CSU for graduate study.

4. A completed resume that contains the following:
   a. Record of all collegiate work, including names of institutions, periods of attendance, and degrees earned.
   b. Record of all professional employment including dates of service (including military).
   c. List of any special skills or competencies (including certifications or licensures).
   d. List of publications, exhibitions, prizes, awards, or other recognitions.
   e. List of service activities (including community and charitable).

Plan C

Applicants to Plan C master’s programs should consult department requirements for submission of standardized test scores.

Application: International Students

Application procedures are similar to those for U.S. citizens or permanent resident students. Refer to U.S. Citizens or Permanent Residents information for instructions.

The following materials must be sent directly to the Office of Admissions at Colorado State University, 1062 Campus Delivery, Fort Collins, CO 80523-1062.

1. An official transcript of all collegiate work completed along with a certified translation into English.
2. Scores on the Test of English as a Foreign Language (TOEFL), International English Language Testing System (IELTS), or Pearson Test of English (PTE) Academic. Test scores should be submitted with institution code 4075. Integrated Degree Program (IDP) Admissions are not required to take the TOEFL, IELTS exam or the PTE Academic exam.
   a. When the CSU graduate degree program is taught in the student’s native language, the TOEFL, IELTS, or the PTE Academic requirement will be waived.
   b. Students are exempted from the TOEFL, IELTS, or PTE Academic requirement if the official language of their country is English or if they have recently earned a degree at an American university.
Required items for Immigration Document Insurance

These items are not required for the application review process, but will be required if officially admitted. The following materials must be sent directly to the department in which the applicant plans to study (see Programs and Degrees webpage for the mailing address).

1. Certified proof of financial support – Graduate Student Certification for Issuance of Immigration Document (GS3F form) and supporting financial documents.
2. Passport copy

Departmental requirements for additional materials such as standardized tests (e.g. GRE or GMAT) are the same as for U.S. students. Regulations regarding deadlines and application fees are likewise the same as for U.S. students.

Information on application deadlines and application fees is contained in the U.S. Citizens or Permanent Residents section.

The U.S. Bureau of Citizenship and Immigration Services requires CSU to have proof of financial support before immigration documentation can be issued. Immigration documentation is needed to obtain a visa. All international students and their accompanying dependents are required to maintain adequate health insurance during their stay at CSU.

Only persons with degrees equivalent to U.S. bachelor’s degrees are qualified to apply for admission except for Integrated Degree Program (IDP) applicants described above. Further, it is a CSU regulation that international applicants should be among the top students in their classes.

CSU requires that proficiency in English language be demonstrated either by the TOEFL, IELTS, or PTE Academic tests prior to admissions. The minimum TOEFL score for admission without condition is 80 for the (internet-based exam). Contact the Graduate School for guidance on interpreting paper-based exam scores. The minimum IELTS score for admission without condition is 6.5. The minimum PTE Academic Score for admission without condition is 58. Official scores, within two years prior to admission, must be submitted directly from the testing agency.

To be considered for conditional admission, a student must have a minimum TOEFL score of 50 on the internet based test, a minimum IELTS score of 5.5 or PTE scores from 40-57. After receiving conditional admission, the student must satisfactorily complete the INTO CSU Academic English Program. Enrollment in regular CSU academic courses is at the discretion of the INTO CSU Academic English Program. Approval of both the department and the Dean of the Graduate School is necessary for such conditional admission.

Generally, however, applicants should achieve satisfactory TOEFL, IELTS or PTE Academic scores before arriving on the CSU campus.

The individual departments may have requirements or standards in addition to or more stringent than those of CSU. Students must contact the department in which they intend to study for additional information. Consult the Department Head or Program Contact Persons for the proper addresses.

The paragraphs in the preceding section on U.S. Citizens or Permanent Residents on academic requirements, how students are selected for admission, non-degree study, previous undergraduate work at Colorado State, certification, and the consequences of presenting any materials that are not genuine, also apply to international students.

Language Requirements

English is the language of instruction at CSU. Adequate knowledge of that language is expected. The various departments generally evaluate students in this regard, and they may require students to secure remedial instruction if necessary.

Students whose native language is not English must demonstrate capability through the TOEFL examinations or other means (see above).

Some departments may require a knowledge of one or more foreign languages for advanced degrees. For information the student should contact the department.

Personal Identifier/Social Security Number

The personal identifier for all CSU students is the CSUID. The CSUID is a nine-digit unique numeric identifier that begins with the digit 8 and is assigned by the ARIES student information system. The Social Security number (SSN) is no longer used at CSU as a personal identifier.

All students are requested to submit a Social Security number (SSN) at the time of admission or before initial enrollment at CSU. The Social Security number is maintained as a secure data element in the student information system and is not accessible as directory information or to unauthorized persons. International students are encouraged to file for a Social Security number although they are not eligible for Social Security benefits. Students’ disclosure of the social security number is required for financial aid purposes, employment, and state and federal reports required by law.

The Social Security number is released to agencies or individuals outside CSU only at the request of the student or in accordance with federal and state requirements in regard to financial aid awards; Internal Revenue Service for student employee salary reporting and 1098T/1098E reporting; and State Controller’s debt collection procedure. CSU has strict policies protecting and prohibiting the use of SSN and uses every reasonable effort to hide and protect SSN.

Readmission

Graduate students enrolled in a degree or certificate program are required to be continuously enrolled. If there is an interruption in successive semester-to-semester registration in a degree program, enrollment will lapse and graduate students will need to reapply for admission. This applies to all graduate students, on-campus resident instruction or online. There is a non-refundable readmission fee.
Readmission is not required for Guest registration or courses taken outside of a degree program.

For a certificate-seeking post-baccalaureate student not enrolled in a degree program, or, if there is a lapse in continuous enrollment in a certificate program, students will be required to complete a new application. There is a non-refundable application fee.

Transfer of Graduate Credit from Other Institutions

Credit may be transferred to a graduate program at CSU with the approval of advisor, committee, and Graduate School. There is no right to transfer credits; each case is assessed individually and accepted or rejected on its merits. The number of credits that may be transferred is limited. See requirements for the number of credits that may be earned at CSU after admission to the Graduate School under the descriptions of the various degree programs and in Credit Requirements section.

Individual credits used to fulfill requirements for previously earned degrees are not accepted in transfer.

Requests to transfer graduate credit earned at another university must be accompanied by official transcripts. Courses accepted for transfer must be at the equivalent level of CSU's regular courses at the 500 level or above. Arrangements for transfer of credit are made when the program of study is submitted (see Program of Study). In general, credits transferred must be part of a graduate curriculum. However, credits that are part of a post baccalaureate professional curriculum in Medicine, Veterinary Medicine, Dentistry, Pharmacy, Law, or Divinity may be so transferred if they address the intellectual bases of a graduate discipline.

Credits earned at institutions not accredited by one of the major regional accrediting agencies are not acceptable for transfer; except that a CSU academic department may petition the Graduate School to have graduate level credits earned from a foreign institution accepted as transfer credit. Grades in courses accepted for transfer will not be included in calculation of the grade point average. No course will be accepted for transfer with a grade less than B.

CSU may establish bilateral cooperative agreements with other institutions within the Colorado State University System (CSU-Pueblo (http://www.csupueblo.edu/Pages/default.aspx) and CSU-Global (https://csuglobal.edu/)) that permit transfer to CSU of up to half of the total required credits for a specific master's degree.

Procedures

1. Any bilateral agreement must be formal, proposed by an academic department, signed by the Provost/Academic Vice-President, and approved by the Committee on Scholarship, Research and Graduate Education (COSRGE). It must refer to a particular named master's degree now offered by CSU.
2. Courses offered for transfer under these arrangements must be:
   a. The exact equivalents of particular courses at CSU and so certified by the Faculty Council Curriculum Committee.
   b. Taught by persons who are Faculty or Affiliate Faculty of CSU.
3. Persons who seek to avail themselves of such transfer privileges must be admitted to graduate school at CSU. No more than nine credits offered for transfer may be earned prior to such admission. This means that students must apply for and secure admission well in advance of actual transfer to CSU.
4. Persons who transfer credits under such a bilateral agreement may also transfer credits under the normal procedures as described in this Bulletin. Such transfers may not exceed six credits and the total number of transferred credits, under bilateral agreement and normal procedure combined, may not exceed half the total required for the master's program.
5. Credits submitted or transferred under such special agreements must be earned by a person enrolled as either a graduate student or a post baccalaureate student at the cooperating institution. Credits earned prior to the award of a bachelor's degree or those used to fulfill requirements for a previously earned degree are not accepted.
6. Additional regulations and restrictions as described in this Bulletin under the section Transfer of Graduate Credit from Other Institutions also apply to bilateral agreement transfers.

Credit for Graduate Courses Taken at CSU Prior to Admission to a Graduate Program

Certain CSU courses taken after receipt of a bachelor's degree but prior to formal admission to a graduate program may contribute to graduate degree requirements (see Credit Requirements for the degree pursuing). Grades earned in such courses will not be included in the calculation of grade point averages. No such courses will be accepted, however, unless a grade of B or better has been earned.

Students of Veterinary Medicine

A student in the College of Veterinary Medicine and Biomedical Sciences who holds a bachelor's degree and who meets the requirements for admission to the Graduate School may pursue work concurrently toward the degrees of Doctor of Veterinary Medicine and Master of Science if approved in advance by the Dean of the College of Veterinary Medicine and Biomedical Sciences and the Dean of the Graduate School. Credits applied on one degree may not be used in meeting requirements for the other. Refer to the Doctor of Veterinary Medicine program (http://cvmbs.colostate.edu/dvm-program/Pages/default.aspx) or the Graduate School (http://www.graduatesschool.colostate.edu/) for more information.

Integrated Degree Program and Integrated Degree Programs Plus Admissions

Exceptional undergraduate students may be recruited to integrated bachelor's/master's or bachelor's/doctoral degree programs (IDPs). An IDP partners an undergraduate and graduate program within or between departments, programs, or SAUs in the same or differing colleges. The graduate degree will be awarded after or concurrently with the award of the Baccalaureate degree. There are two types of IDPs:

1. The IDP is for undergraduate programs that have a 120 degree credit requirement;
2. The IDP+ is for undergraduate programs that have a 121, or more, degree credit requirement.

Undergraduates enrolled in a bachelor's degree program at CSU may apply for admission to the appropriate IDP program if they meet the following criteria students must:

1. Complete at least 90 credits of course work toward their first bachelor's degree.
a. Students enrolled in IDP+ programs may double count one through nine 500-level credits toward both their bachelor's/ master's or their bachelor's/PhD degrees when the credit requirements for the undergraduate degree programs range respectively between 121 through 129 credits, or more. For example, a maximum of five credits could be double counted for a 125-credit degree and a maximum of nine credits could be double counted for a degree program with 129 or more credits. (This process is managed by the Registrar's Office; the maximum number of credits that may be double counted is 9.)

b. Students enrolled in an IDP may not double count credits. However, prior to earning 120 credits, these students may enroll for a maximum of nine credits of graduate-level course work that may be applied toward the graduate degree, provided such course work is not used to meet bachelor's degree requirements. As undergraduates, students pay the undergraduate tuition rate for these credits. (This process is managed by the Registrar's Office.)

2. Complete or enroll in 9 credits of upper division level courses required or listed within their majors by their senior year.
3. Maintain a cumulative GPA of 3.000 or above.

In addition to the on-line application and the application processing fee, students applying for admission to either IDP program must send the following materials directly to the department in which they plan to study:

1. Three letters of recommendation written by individuals in each of the following categories:
   a. Applicant's undergraduate advisor.
   b. Applicant's instructor in at least one course within the applicant's major who is not the applicant's advisor.
   c. Applicant's instructor in a course outside of the applicant's major field of study.
2. A written "statement of purpose" that contains:
   a. A summary of long-term professional or personal goals.
   b. A statement regarding the applicant's educational goals.
   c. A statement indicating how participating in the Track III degree program will contribute to the applicant's long-term goals.
3. A completed resume that contains the following:
   a. Applicant's undergraduate advisor.
   b. Applicant's instructor in at least one course within the applicant's major who is not the applicant's advisor.
   c. Applicant's instructor in a course outside of the applicant's major field of study.
   d. List of publications, exhibitions, prizes, awards, or other recognitions.
   e. List of service activities (including community and charitable).

To be eligible to offer an IDP or IDP+, a specific program must submit, and have approved by the Graduate School, a one-time Memorandum of Understanding (MOU) providing the following information and agreements. Contact the Graduate School for the MOU format.

1. List participating undergraduate and graduate program codes.
2. All students recommended will have a GPA of 3.0 or higher.
3. 21 credits must be earned after admission to the Graduate School for a master's degree and 62 credits for a PhD.
4. Students will be advised of the following:
   a. The semester after the students have earned 120 or more credits at the undergraduate level the student will be switched to graduate standing and will begin paying graduate tuition and fees. They will lose all undergraduate institutional and scholarship aid such as Pell, COF and Boettcher awards.
   b. Their Undergraduate Degree Plans (DARS) will no longer track degree completion in a comprehensive manner, so the student and advisor will need to work with their designated Degree Analysts in the Registrar's Office to ensure timely and accurate graduation from the bachelor's degrees.

5. Students must file their programs of study (GS form 6) by the end of the second week of the first semester after Graduate School admission.

6. Students who are dismissed or drop out from the Graduate School, and who are still in good standing within their undergraduate programs, will be permitted to complete their undergraduate degrees. Students will be required to make contact with the Graduate School for the next steps to reactivize their undergraduate status. To support undergraduate degree conferral for students who do not complete the IDP/IDP+, departments must submit an explicit plan for undergraduates showing how they will allow students to graduate if they have completed: 1) All non-elective courses required for that undergraduate degree, and 2) The minimum number of undergraduate credits required by the undergraduate degree program. These credits may consist of both graduate and undergraduate coursework. The graduation process may require additional paperwork with the Registrar's Office.

7. Students must complete applications for graduation (GS25) from the Graduate School either concurrently with, or subsequent to, completing the bachelor's degrees.

Sequential Degree Programs

Sequential degree programs (SDPs) partner an undergraduate and a graduate program within or between departments, programs, or SAUs in the same or differing colleges. The graduate degree will be awarded only after the award of the Baccalaureate degree. Undergraduate students complete a SDP application created by the partnering undergraduate and graduate programs. The timing of the application and its requirements are defined by the partnering programs and include minimum requirements related to criteria such as GRE, recommendations, and research experience. The minimum GPA acceptable for entrance into a SDP is 3.00. Students may be contingently admitted into the SDP at any point the partnering programs of the SDP so choose. Students must complete the Graduate School application and the application fee. Final admission to the SDP is conferred when the students meet the minimum SDP and Graduate School admissions criteria upon completion of their bachelors' degrees. To be eligible to offer a SDP, a specific program must submit, and have approved by the Graduate School, a one-time Memorandum of Understanding (MOU)

Undergraduate students in SDPs may enroll for a maximum of nine credits of graduate-level course work that may be applied toward the graduate degree, provided such course work is not used to meet bachelor's degree requirements. As undergraduates, students pay the
undergraduate tuition rate for these credits. (This process is managed by the Registrar's Office.)

Departments offering SDP programs with unique requirements, incentives or other elements in addition to, or instead of, those stated above must request approval from the Graduate School for the specific terms they wish to address. The final terms of the agreement will be stipulated in an MOU between the Graduate School and the Department.

Dual and Joint Master's Degree Programs

Dual and joint degree programs partner two master's degree programs within or between departments, colleges, programs, or SAUs in the same or differing college. Such dual and joint programs have been formally reviewed and approved through the University's curricular processes. A dual degree program results in the simultaneous conferral of two separate degrees. A joint degree program results in the conferral of a single degree with both programs listed on the diploma. For either the dual or joint degree program, a defined number of credits is shared between the two program areas, so that the total number of credits is less than that for two individual degrees.

Applicants must meet the minimum qualifications of the Graduate School (see section on Application: U.S. Citizens or Permanent Residents [https://gradadmissions.colostate.edu/apply/]), as well as any additional qualifications of the dual or joint program.

For new students, applicants must apply online [https://gradadmissions.colostate.edu/apply/] to the dual or joint program (see section on Application: U.S. Citizens or Permanent Residents [https://gradadmissions.colostate.edu/apply/]). There is a single application process and only one application fee is submitted. If the student is already enrolled in one master's degree, and wishes to switch to a dual or joint master's degree program, the student must complete the Request for Change of Department and/or Degree Program (GS7) form [https://graduateschool.colostate.edu/forms/] and submit it to the Graduate School.

The earning of a graduate degree is a wide-ranging, challenging intellectual experience. It certainly involves mastery of important subject matter. It may require the possession of knowledge in addition to that acquired through course work and also the ability to creatively synthesize and interpret that knowledge. Further, research or artistic projects are often an integral part of graduate study as may be field responsibilities or service obligations. Since graduate work extends beyond completion of course work in several ways, it is often the case that some form of culminating event, be it comprehensive examination, thesis, or other undertaking is part of the degree program.

The graduate experience, involving as many dimensions as it does, requires careful and comprehensive planning. This planning is done by the student, the advisor, and the graduate committee. Of course, it should take place early in the graduate career. The necessity for planning underlies the advisory system, the limitation on the number of credits that may be transferred, and requirements that certain amounts of the work in any degree program must be completed at CSU after admission to the Graduate School. These are all explained below.

Comprehensive planning assures that the greatest possible benefit will be gained from graduate study. Depending on discipline, career objectives, and particular curricular needs, unique study plans may be arranged for students on an individual basis.

Just as the scope of activities involved in earning a graduate degree is extensive and complex, so is the necessary evaluation of student performance. Students must not only demonstrate the ability to earn satisfactory grades in their courses, but must also show that they possess those more elaborate abilities and skills essential to the various academic and professional fields. The advisor and graduate committee have the primary responsibility for assessing these broader dimensions of student progress.

The requirements set forward in this section are those of CSU as a whole. However, the various programs may have additional requirements not listed here. These requirements must also be met in completing a degree. Please consult the department for appropriate information. See the Areas of Study within the Graduate Degrees [http://graduateschool.colostate.edu/programs/] section in the Graduate School website.

Summary of Procedures for the Master's and Doctor of Philosophy Degrees

NOTE: Each semester the Graduate School publishes a schedule of deadlines. Deadlines are available on the Graduate School website. Students should consult this schedule whenever they approach important steps in their careers.

The Advisory System

Since thoughtful planning is vital to a graduate student career, a comprehensive arrangement for advising has been established. Each student is initially assigned a faculty member as advisor by the head of the department in which the major is pursued.

A permanent advisor will be selected from among departmental faculty once initial entry to the program has been completed. (The temporary advisor may assume this role if appropriate.)

The advisor is the chief source of advice in the planning process. This individual works closely with the student throughout the graduate career on all matters related to the degree program.

A close, cordial, and professional relationship is therefore of the utmost importance. Both student and advisor should work at achieving mutual understanding and respect.

Except for those pursuing Plan C master’s degrees, each student has an individual graduate advisory committee. Members of the committee should be chosen on the basis of the student’s interests, the student’s experience with faculty members, and the advisor’s knowledge and expertise. The makeup of a graduate committee must be approved by the department head and, of course, agreed to by the potential members themselves. It is well for the student to assume the responsibility of securing these approvals and agreements.

The purpose of the committee is to make available to the student a broad range of knowledge and expertise. It aids in general advising of the student and assists in planning the major elements of the program. The committee also evaluates student progress throughout the graduate career. It may provide assessments at various stages and it administers the final examination. The committee is not responsible for reminding students of published deadlines nor for monitoring procedural details. The student should manage such matters independently.

The committee must consist of at least three faculty members for a master’s degree program and at least four for a doctoral degree program. The members are as follows:

1. The advisor who serves as chairperson of the committee and who must hold academic faculty rank as a professor, associate professor, or assistant professor of any appointment type within the department or program granting the degree;
2. One or more additional members from the department;
3. Any non-departmental faculty member who may be appropriate; and
4. One member from an outside department who, appointed by the Dean of the Graduate School, represents the Graduate School. The outside committee member appointed by the Dean of the Graduate School must hold a tenured, tenure-track, contract, continuing, transitional, joint, or emeritus/emerita faculty appointment at CSU. The outside member should serve as an impartial external evaluator on the committee, ensuring quality of scholarship and fairness in process.

5. Non-CSU employees may obtain faculty affiliate appointments in an academic department in order to be eligible to serve on graduate committees. They may also be appointed to such committees through a nomination process that is reviewed and approved by CoSRGE (Faculty Council Committee on Scholarship, Research, and Graduate Education).

Please contact the Human Resource staff member of the appropriate department to determine the appointment designation of a potential committee member.

Due to the interdisciplinary nature of some scholarship at CSU, conflicts of interest in advisory committees between members or between the student and one or more members may not be avoidable. When a conflict of interest exists, a written report must be submitted by the chair of the advisory committee to the Dean of the Graduate School that includes: 1) the names of those involved in the conflict of interest, 2) the nature of the conflict of interest, 3) a plan to manage the conflict of interest. Failure to disclose a conflict of interest is a violation of CSU Policy (Faculty and Staff Manual: D.7.7. (https://facultycouncil.colostate.edu/faculty-manual-section-d/#D77), Appendix 2, Appendix 6 (https://facultycouncil.colostate.edu/media/sites/43/2018/03/2017-appendix-7-addition.pdf)). Individuals who are not academic faculty but who have special expertise may serve on committees in addition to the prescribed members, but may not vote regarding examination results.

Plan C master’s students are required to have an advisor but not a committee.

The advisor is identified and the committee is appointed through filing a GS Form 6 (http://graduateschool.colostate.edu/policies-and-procedures/forms/#GS6) with the Graduate School. It is the student’s
responsibility to identify an advisor and a committee, all of whom are willing and qualified to serve. The student’s department chair or designee will use their best efforts to facilitate selection of the committee and subsequent changes therein. With notification, temporary replacement of a member may be arranged. A member, including the advisor, may resign from the committee in accordance with any applicable provisions in the student’s departmental code. In such cases, the affected student and their department chair will be notified promptly by the departing member. It is then the student’s responsibility to obtain a replacement. Any permanent changes are recorded through the filing of GS Form 9A (http://graduateschool.colostate.edu/policies-and-procedures/forms/#GS9A) with the Graduate School.

Persons who are not academic faculty (as defined in the Academic Faculty and Administrative Professional Manual (http://facultycouncil.colostate.edu/faculty-manual/)) of CSU may be appointed full voting members of graduate student advisory committees in the following manner. A person may be nominated for membership on a specific student’s committee. This is accomplished by submission of the following materials to the department head: 1) a resume, 2) relevant supporting material, 3) a statement from the nominated individual that indicates whether or not there is a conflict of interest with any of the committee members or student. If there is a conflict of interest, the chair of the advisory committee must submit a written plan to manage the conflict of interest. If, using procedures and criteria outlined in the departmental code, the department head judges the appointment appropriate, they shall forward a recommendation and all materials to the Dean of the Graduate School. The Dean of the Graduate School shall bring the nomination to the appropriate Faculty Council Committee, which shall act on the nomination.

A person so approved shall be eligible to serve on the committee for the duration of the student’s work toward the degree. The Graduate School shall maintain a roster of such appointments. Although approval is granted with respect to a particular student’s committee, such members may serve on other student committees in the same department with additional departmental approval provided that such service shall not extend beyond five years of the original appointment.

Such non-faculty appointments are subject to the following restrictions.

1. Such an appointee may not serve as an outside member of graduate committees.
2. Service may not be as the sole advisor of the student.
3. The appointee must have a degree equivalent to that sought by the student. In the case of professional doctorate graduate committees, an appointee without an equivalent degree may be nominated if the appointee has a substantial and relevant employment record in an applied setting.
4. The appointee must not be a student at CSU.
5. No more than one such person may serve on any graduate student’s committee.
6. The person appointed should be an addition to the minimum number now required on graduate committees and not a replacement for required faculty. The advisor may invite others to participate in the examination in a nonvoting, advisory capacity.

**Program of Study**

Each student must prepare a Program of Study, a document which lists all courses taken in pursuit of the degree. This is the formal statement of what is done to achieve the degree, the summary of all academic planning. The advisor and the committee are heavily involved in the development of the Program of Study. The Program of Study must be filed with the Graduate School before the time of the fourth regular semester registration. Students who fail to meet this requirement may be denied subsequent registration. For Integrated Degree Program (IDP) Admission students, program of study forms (GS Form 6 (http://graduateschool.colostate.edu/policies-and-procedures/forms/#GS6)) must be filed by the end of the second week of the students’ first semester after admission to Graduate School. Courses listed and approved on this form for graduate requirements will be automatically excluded from the undergraduate degree program of the student. The Graduate School reviews each program of study (GS Form 6 (http://graduateschool.colostate.edu/policies-and-procedures/forms/#GS6)) and determines whether the program of study conforms to University policy. That is, an early graduation check is performed. Problems are reported to students so that they can be corrected at an early date.

While it is important to plan the Program of Study early in the graduate career, it is not necessarily permanently fixed. Plans may develop and change. Modifications must be formally recorded, however, and the advisor, department head, and the Graduate School must approve. Courses which have been taken and for which a grade has been received (A through F, I, S or U) may not be removed from the Program of Study. Changes in program of study or committee membership should be made with extreme care since no additional comprehensive checks are made until the time of graduation.

The Program of Study is submitted on GS Form 6; any changes are recorded on GS Form 25 (http://graduateschool.colostate.edu/policies-and-procedures/forms/#GS25), Application for Graduation.

**Scholastic Standards**

To meet the requirements for graduation and to remain in good academic standing, a student must demonstrate acceptable performance in course work after being admitted to a graduate program. This requires a cumulative 3.000 grade point average (GPA) in each of the following GPA categories:

1. Overall course GPA, defined as the GPA calculated from all regular and non-regular courses graded traditionally (A through F).
   - Regular courses with course numbers less than X82.
   - Non-regular courses with numbers X82 to X99.
2. Regular course GPA, defined as the GPA calculated from all regular courses graded traditionally.
3. Program of Study overall GPA, defined as the GPA calculated from all traditionally graded regular and non-regular courses listed on the approved program of study.
4. Program of Study regular GPA, defined as the GPA calculated from all traditionally graded regular courses listed on the approved program of study.

A minimum GPA of 3.000 in categories 1 and 2 are required to remain in good academic standing. For graduation, a minimum GPA of 3.000 is required in all four categories.

Separate GPAs are calculated based on courses taken as a master’s or doctoral student. For example, changing from a master’s degree to a doctoral degree, or vice versa, will create separate GPAs based on grades received in coursework taken at each degree level.
In addition, good academic standing requires satisfactory progress in the overall graduate program. Students’ individual graduate advisory committees may render judgments as to whether satisfactory progress is being made toward the degree, taking into account all aspects of academic performance and promise, not necessarily coursework alone. A positive judgment is required to remain in good academic standing.

Failure to maintain good academic standing due to a cumulative grade point average less than 3.000 results in being placed on academic probation. The probationary period extends for one semester beyond the one in which this status is acquired. Exceptions to the probationary period are:

- New regularly admitted students will not be placed on probation until they have completed 12 regular credits or two semesters of graduate work, whichever comes first, and
- Students who were admitted after waiver of the minimum undergraduate GPA requirement are considered provisionally admitted. Such students must achieve a regular and overall GPA of 3.000 or higher their first semester or they will be dismissed from their programs and the Graduate School.

During the probationary period, the student must register for traditionally graded courses that affect the grade point average. With permission of the student’s advisory committee, the student may register for continuous registration instead of traditionally graded courses. Continuous registration may be used to extend the probationary period for a maximum of two semesters, after which traditionally graded courses must be taken. Students on probation are subject to dismissal by the academic department or the Dean of the Graduate School at the end of the probationary semester unless good academic standing has been regained. This requires adequate improvement in cumulative grade point averages (3.000) and/or satisfactory progress as determined by the student’s graduate advisory committee. Students not making satisfactory progress due to their grade point average are encouraged to contact their advisors and/or advisory committees in order to set up a meeting to create a progress plan. Integrated Degree Program (IDP) students in combined bachelor’s/master’s degree programs who have accumulated at least 120 credit hours of course work and who fail to maintain a 3.000 GPA in their graduate course work including any courses listed on their GS 6 Form will be placed on probation by the Graduate School and will have one semester in which to improve their cumulative grade point averages to no less than 3.000 in their graduate course work. Failure to bring the cumulative graduate GPA to at least 3.000 will result in dismissal from the Graduate School with no re-enrollment permitted prior to completion of the bachelor’s degree. IDP students who are dismissed from the Graduate School, and who are still in good standing within their undergraduate programs, will be permitted to complete their undergraduate degrees. These students can petition the Registrar to reinstate courses to be applied toward their undergraduate degrees.

When a student’s graduate advisory committee or an appropriate departmental graduate committee finds that a student is not making satisfactory progress toward the degree due to factors other than grade point average, and that satisfactory progress cannot be anticipated, a plan should be created and the following steps should be taken.

1. Inform the student of the concerns, create a progress plan with the student, develop a timeline and inform the student of the potential consequences (dismissal) if the progress is not satisfactory.
2. The committee should keep in contact with the student to give feedback during the progress plan timeline and document such contacts and their outcomes.
3. At the end of the timeline, if progress is not adequate, the committee may recommend dismissal from the program. The recommendation goes to the Department Head and the Dean of the Graduate School and should include documentation on the steps taken with justification for this action.

The recommendation must be referred to the Department Head for approval and the Dean of the Graduate School for final action. The student may appeal such an immediate dismissal through the existing Graduate School appeals procedure. Departments which invoke this process must have published guidelines explaining the performance indicators which lead to immediate dismissals.

Grades of C or higher must be earned in all courses on a Program of Study. Outside of the Program of Study, D grades may be accepted in background courses, but such courses must be included in the computation of the cumulative grade point average. There is no repeat/delete option in Graduate School. If a student repeats a course that is on the Program of Study, both courses will be listed on the Program of Study. The Program of Study GPA will be calculated with the higher course grade only, and not with the average grade of both courses. The grades for both courses are included in the GPA calculation for the overall course GPA and regular course GPA from courses taken within and outside of the Program of Study. Graduate students may take 100 and 200 level courses for general enlightenment or to satisfy a background requirement. These courses are not to be included in the student’s program of study, and grades earned in such courses will not be considered in computing the graduate grade point averages described above. Once admitted to a graduate program, grades earned in courses 300 level and above will be considered in computing the graduate GPA. Standards and requirements for off-campus graduate study are the same as those standards and requirements on campus. The academic department head has the basic responsibility for the implementation of this policy. Note that only courses with a grade of B or better may be accepted as transfer courses and such courses are not included in the student’s calculation of grade point averages.

For thesis, dissertation, research, and independent study graduate courses, the number of student credit hours earned will be determined using a base rate of 48 hours of student effort per credit hour. The faculty advisor, or other department official, shall estimate the total number of hours of student effort required over the length of the semester. This effort shall include consultation with the advisor, as well as library, laboratory, field, or studio work. The total number of hours shall be divided by 48 and the resultant quotient (rounded off to a whole number) shall define the number of credits to be awarded.

### Diagnostic Examination

A diagnostic examination is administered by a number of departments before the first registration to determine the areas in which there may be inadequate preparation. Results from the diagnostic examination are used in planning remedial course work when needed and in preparing the Program of Study (GS Form 6 [http://graduateschool.colostate.edu/policies-and-procedures/forms/#GS6]).

### Final Examinations

Each candidate for a degree, except for Plan C master’s students, must pass a final examination which must be held by the published deadlines of the student’s graduating term. The examining committee is normally the student’s graduate committee with the advisor serving as chairperson. If a department chooses to administer a common examination to its Plan B master’s candidates, a departmental examining
committee may serve this function. Plans and arrangements for a common final examination for Plan B candidates must be on file with the Graduate School in advance of the examining date.

Voting at all final oral examinations shall be limited to the members of the student’s committee, and a majority vote is necessary to pass the examination. A tie vote is interpreted as failure to pass the examination. Committee members who are not academic faculty do not have a vote on the final examination.

Providing the committee approves, a candidate who fails the final examination may be reexamined once and, for the reexamination, may be required to complete further work. The reexamination must be held no later than 12 months after the first examination. The examination must not be held earlier than two months after the first examination unless the student agrees to a shorter time period. Failure to pass the second exam results in dismissal from the Graduate School.

The student is responsible for taking the Report of Final Examination (GS Form 24) to the examination and returning it, completed and signed, to the Graduate School Office within two working days after results are known; this must be by the published deadline of the student’s graduating term.

Participation in oral examinations by the student and/or one or more members of the examining committee may be via electronic link so long as all are participating simultaneously and all committee members and the student have agreed to this in advance.

**Time Limit**

There is a ten-year time limit for completion of the master’s or doctoral degrees.

Courses to be applied toward fulfilling the requirements for the master’s and doctoral degrees, including any which may have been transferred from another institution, must have been registered for and completed within the ten years immediately preceding the date of completion of requirements for the degrees.

**Continuous Registration**

All students admitted to a graduate program at CSU are required to be continuously registered in the fall and spring semester throughout their degree programs. This policy applies from the time of first enrollment through the graduation term. Students may fulfill this requirement by registering for any graduate credit-bearing course (regular or non-regular). As an alternative, students may opt for a Continuous Registration (CR) status. Registration for CR status is accomplished in the same way as registration for courses. Section ID numbers appear in the class schedule under the CR subject code. Students registering for CR will be assessed a fee for each semester of CR registration. Students who register for CR on or after the first day of the term will be charged a Late Registration Fee. Students must be either enrolled for at least one credit or must register for CR during the term (fall, spring, summer) they graduate.

Students enrolled in CR have access to library services and campus computing services; they pay a mandatory University Technology Fee. CR students may also choose to purchase CSU student health insurance and/or access the CSU Health Network for a fee.

The maximum number of CR semesters a student may enroll in during their degree program is ten (10). When a student is in their first (1st), fourth (4th) and eighth (8th) semesters of CR, the student’s advisory committee is required to review the student’s progress and intentions related to degree completion, with input from the student. Upon completion of the review, a report that provides a student plan which includes academic expectations and an accompanying timeline for satisfactory progress for the degree will be forwarded to the department head/chair and student. A registration hold will be placed on a student with more than 10 semesters of CR unless the student’s department head has submitted the student’s progression plan and a petition to the Dean of the Graduate School to extend the number of CR semesters to a specific number beyond 10.

Students may register for CR for the following reasons:

1. They do not require the use of University resources (other than those listed above), but are actively working on their degree requirements.

   Students who are utilizing CSU facilities to conduct their research must not enroll in CR; instead, they must enroll in the appropriate number of research, thesis or dissertation credits. See Curricular Policies and Procedures Handbook, Appendix D, for information regarding faculty contact time needed to generate credit hours: http://curriculum.colostate.edu or

2. They will not be working on their degree requirements, but will be leaving the University for professional or personal reasons (e.g., mission service, medical or parental leave, work) or an official assignment for CSU.

Subject to the established time limits for the earning of graduate degrees and the various academic requirements, CR registrants need not apply for readmission should they wish to take additional graduate courses. Such students are ensured a place in their graduate programs as long as they remain in good academic standing. However, students who do not register will need to apply for readmission for their next semester of enrollment.

The availability of the CR option shall not supersede any other registration requirements to which students may be subject at the University, Department, or Program level. For example, the credit bearing registration requirement for graduate assistantships applies to all students appointed to these positions. Similarly, some units may adopt more stringent CR policies than that expressed here.

**Graduate Enrollment Requirement**

Graduate degree candidates must be either enrolled for at least one credit or must register for CR during the term (fall, spring, or summer) they will graduate.

**Posthumous Degree**

In exceptional circumstances, the Board of Governors of Colorado State University may award degrees posthumously (http://catalog.colostate.edu/general-catalog/academic-standards/graduation/#undergraduat_degrees).

**Evaluation of Graduate Students and Graduate School Appeals Procedure**

Evaluation of Graduate Students
Graduate School Appeals Procedure
Evaluation of Graduate Students

Graduate students are students, apprentices to the professions, and, when they hold an assistantship or other paid position, student employees. Each of these roles has its own rights and responsibilities. Graduate students are responsible for knowing any special expectations and requirements of their department and program. They are expected to remain in good academic standing by making satisfactory progress toward the degree (see Scholastic Standards) and must at all times have an advisor. In the event that an advisor resigns from that position, it is the student’s responsibility to obtain a replacement. Department codes shall designate a system for periodic evaluation of progress toward completion of the degree. The student and the advisor share responsibility for scheduling evaluations. Results of such evaluations will be sent to the department head and to the graduate student being evaluated.

Students judged to be making unsatisfactory progress toward a degree or whose work is not of the quality expected by the student’s advisor and/or graduate committee may be recommended for academic probation or immediate dismissal from the graduate program (see Scholastic Standards) and/or termination of assistantship. The Dean of the Graduate School will be informed in writing of all students who are making unsatisfactory progress. Copies of the letter shall be sent to the graduate student and also shall be maintained in a departmental file.

Prior to taking actions on academic probation for reasons of unsatisfactory progress toward a degree other than insufficient grade point average, termination of an assistantship for reasons of unsatisfactory performance, or dismissal from the graduate program, an informal conference shall be held among the student, the advisor, and the department head for the purpose of discussing the student’s performance and giving the student an opportunity to respond. The student will be provided reasonable notice of the issues to be covered in advance of the conference. In cases where grounds may exist for termination of an assistantship prior to the end of the stated employment period and for reasons of unsatisfactory performance, the supervisor(s) shall participate in the informal conference.

Graduate students have the right to appeal certain academic decisions, before any action is taken, as described under Graduate School Appeals Procedure. Appeals of grades and academic integrity decisions must utilize appropriate procedures described in the General Catalog. Students alleging termination of assistantships or dismissal from the graduate program on grounds of unlawful discrimination are advised to consult with the Office of Equal Opportunity. (For information on the “at will” employment status of graduate assistants, see Assistantships.)

Graduate School Appeals Procedure

Graduate students may appeal decisions concerning unsatisfactory performance on graduate preliminary or final examinations (see this section), academic probation for reasons of unsatisfactory progress toward the degree other than insufficient grade point average, termination of or election to void an assistantship for reasons set forth in the terms and conditions applicable to graduate assistant appointments, or dismissal from the graduate program for academic reasons to the Dean of the Graduate School. Grading decisions in courses are subject to appeal according to the University’s policy on Appeals of Grading Decisions, as set forth in the Academic Faculty and Administrative Professional Staff Manual (http://facultycouncil.colostate.edu/faculty-manual/).

A student has a total of 35 working days to make a formal appeal to the Dean of the Graduate School from the date when an appealable decision has been made that is of concern to the student. Prior to submitting an appeal to the Dean of the Graduate School, the student should discuss the decision with the academic officer(s) whose actions are challenged in an informal attempt to resolve concerns. (Academic officers may include the student’s advisor, graduate committee, department head, supervisor, etc.) If the matter is not resolved to the student’s satisfaction, the student may initiate a formal appeal by submitting the matter in writing to the Dean of the Graduate School. In the written appeal:

1. the student must clearly identify the actions being challenged,
2. the rationale for the challenge
3. the person(s) against whom the complaint is made, and
4. the redress sought.

If an appeal is not filed within 35 working days following the adverse recommendation or decision, then this recommendation or decision will become final. If an appeal is filed within 35 working days, then the decision regarding the appeal is final. The original adverse recommendation or decision being appealed by the student remains in effect until the appeal is final.

The Dean of the Graduate School shall implement the appeal procedures below, keeping records of the case. A review panel, composed of two faculty members with degrees at the level being pursued by the student appellant or higher and one graduate student pursuing a degree at that level or above, will be appointed. One faculty member will be appointed by the Dean of the Graduate School and another faculty member will be appointed by the dean of the college in which the student appellant’s program is located. These appointees will be from departments other than that of the student appellant, but they should be from related disciplines so they are reasonably familiar with the standard procedures in that department. In the event that either the Dean of the Graduate School or the dean is a principal in the case, the Provost will appoint appropriate faculty members. The Graduate Student Council will provide a list of graduate students pursuing graduate degrees who are willing to serve on review panels from which the Dean of the Graduate School will appoint a student who is from a different department than the student appellant, but who should be from a related discipline. In the event that the Dean of the Graduate School is a principal in the case, the Provost will appoint the student member.

The Review Panel will consider the case in detail. It must review any written record of the case. It must afford the student appellant an opportunity to appear in person before it and consider any relevant written materials the student may wish to bring to its attention. The panel will hear from the academic officer(s) whose action is being appealed and may confer with other involved parties. It shall evaluate any other information it deems important to its deliberations. Written summaries of the deliberations will be kept. To overcome the presumption of good faith in the performance judgment by the advisor, supervisor, and/or graduate committee, an appeal must demonstrate that the evaluation was based upon matters that are inappropriate or irrelevant to academic performance and applicable professional standards and that consideration of those matters was the deciding factor in the evaluation. If the panel finds in favor of the student by a majority vote, it will make appropriate recommendations to the Dean of the Graduate School, such as reassignment to another advisor and/or graduate committee,
administration of another examination, or alternative assistantship assignment. The Dean of the Graduate School and the dean of the college involved shall jointly review the case, giving due consideration to the panel’s report and recommendations. Following consultation with the Provost, as appropriate, the Dean of the Graduate School shall make the final decision of CSU. In the event where the Dean of the Graduate School is a principal in the case, the duties of the Dean of the Graduate School, with respect to this case, shall be transferred to the Provost. In the event that the decision recommends termination of an assistantship due to unavailability of funds or other conditions beyond CSU’s control or due to a lack of performance of assigned duties and functions as set forth in the terms and conditions applicable to graduate assistant appointments, the termination must be approved by the Board of Governors, or the President, as its delegated representative.

Other appeal or reporting processes available to students are included below.

1. Students may appeal disciplinary issues, subject to the University Discipline Process, through the Student Resolution Center. (https://resolutioncenter.colostate.edu/)
2. Students may file a complaint regarding what a person may believe to be an act of discrimination or harassment, based on race/ethnicity, eg. color, religion, national origin, or ancestry, sex gender, disability, veteran status, genetic information, sexual orientation, or gender identity or expression to the Office of Equal Opportunity (http://oeo.colostate.edu/).
3. Procedures to report observed, suspected, or apparent Research Misconduct can be accessed through Research Integrity and Compliance Review Office (https://www.research.colostate.edu/research-misconduct/).

Master’s Degrees

Master’s Degrees
Master of Fine Arts Degree
Dual and Joint Master’s Degrees

CSU offers a variety of master’s degrees. The features and requirements of these degrees are summarized in the Programs A-Z section of the Catalog.

Master’s Degrees

An important distinction is made between Plan A and Plan B, Plan C, and the Professional Science Master’s. The former, Plan A option, requires the preparation of a thesis. The thesis is typically a written formal document which addresses, in an original fashion, some important concern of the discipline. A thesis involves significant independent work. A certain number of credits are allowed for the preparation of the thesis. The Plan B degree does not require a thesis; instead, either a scholarly paper, exam, portfolio, or similar project is required.

Plan C master’s degree options are distinguished in two ways. First generally, only course work is required. No thesis, project, or final examination is required; however, some specific programs may require an internship, practicum, or other experience consistent with expressed goals of the program, as approved by the University Curriculum Committee. Second, Plan C options are designed for professional degrees; thus, this option is not available in the M.A. or M.S. Further, within any given department, Plan C degrees may not bear the same title as those with Plan A or Plan B options. Please note, however, that not every professional degree need offer the Plan C option.

The Professional Science Master’s (PSM) degree option (30 credit minimum) is designed to meet the following curriculum requirements: 1) a majority of credits must be earned in advanced science, technology, engineering, math and/or computational sciences courses over the two year program; 2) there must be a professional skills component; and 3) a capstone activity based on an experiential component, that includes a field placement course (e.g. internship, practicum, affiliation, field work) must be a part of the curriculum. No thesis, project, or final examination is required. The PSM is to provide managers for organizations that provide technology-based outcomes in public, private, government, or non-profit sectors. PSMs must conform to the nationally accepted academic criteria for the PSM curriculum as determined by the Commission on Affiliation of PSM Programs (https://www.professionalsciencemajors.org/) (formerly named PSM National Office) (psmoffice@sciencemajors.com).

An active advisory board composed of individuals from industry, business, government, non-profit organizations, and CSU faculty is required; advisory board members serve to provide advice on the program curriculum, assist with student projects and placement, and interact individually with students. To be recognized as a PSM degree, programs must first be approved by the Commission on Affiliation of PSM Programs, and subsequently approved and routed through the paths required by the CSU Faculty Council, Curricular Policies and Procedures Handbook. PSM specializations are listed in the Graduate and Professional Bulletin.

Credit Requirements (Master’s Degrees)
The minimum number of required credits for all master’s degrees is 30. However, individual departments may have credit requirements in excess of the minimum university requirement. For example, terminal professional degrees may have a minimum credit requirement that exceeds 60. The number of 500-level or above credits earned for master’s degrees varies: a minimum of 50% for Plans A and B, and 21 or a minimum of 50% whichever is more for Plan C’s and Professional Science Master’s degrees. Additionally, at least 12 of the 500-level or more credits must be in regular courses for all master’s degrees. Other courses may be at the 300- or 400-level or may be in courses not defined as regular. A minimum of 24 credits must be earned at CSU, 21 of which must be earned after admission to the Graduate School. Plan C master’s and Professional Science Master’s programs may not include independent study, research, or supervised college teaching credits toward the degree unless one or more of these are required by the program, as approved by the University Curriculum Committee. Additionally, Plan C master’s may not include internship or practicum credits toward the degree unless one or both are required by the program, as approved by the University Curriculum Committee. Credits earned in pursuit of one master’s degree may not be used for a second except in those cases where an M.A. degree is applied to the M.F.A. (see section on Master of Fine Arts Degree) or when the student is enrolled in an approved dual or joint master’s degree program (see section on Dual and Joint Master’s Degrees).

Final Examination (Master’s Degrees)
Master’s Plan A and Plan B students are required to complete and pass a final examination/defense. At the discretion of the committee, the final examination may be oral or written, or both. At least one week before the
final examination the advisor must inform the student and the committee member of the nature and scope of the examination.

**Master of Fine Arts Degree**

This is a terminal degree for practicing professionals in the visual or literary arts. In general, it requires at least three years of full-time study beyond the baccalaureate or at least one year of full-time study beyond the Master of Arts degree.

This degree requires the preparation of a major artistic work. This work, whether in the form of a product of the visual arts, a performance, or a written manuscript, must

1. demonstrate a level of creativity sufficient to establish the student as a member of the appropriate artistic community, and
2. stand in its own right as a significant aesthetic or literary contribution. This work is presented as an M.F.A. thesis.

**Credit Requirements (Master of Fine Arts Degree)**

Total credit requirements vary from 48 to 60 according to the department in which the degree is earned. Further, individual departments may have requirements in excess of CSU minimums laid out in the Catalog. The number of 500-level or above credits earned for the Master of Fine Arts must be a minimum of 50%; of that number, 12 must be in regular courses. Other courses may be at the 300- or 400-level or may be in courses not defined as regular. In general, a minimum of 32 credits must be earned at CSU, 21 of which must be earned after formal admission to the Graduate School.

However, if a previously completed Master of Arts degree is submitted in partial fulfillment of the requirements, up to 30 credits may be accepted toward the program. If this option is used, no additional transfer credits may be accepted. In this case, a minimum of 18 credits must be earned after formal admission to the M.F.A. program.

**Final Examination (Master of Fine Arts Degree)**

A final examination is required for the Plan A degree. The final examination may be oral or written or both. At least one week before the final examination, the advisor must inform the student and the committee members of the nature and scope of the examination.

**Dual and Joint Master's Degrees**

Dual and joint degree programs partner two intra-university master's degree programs within or between departments, programs, or SAUs in the same or differing colleges. A dual degree program results in the simultaneous conferral of two separate degrees. A joint degree program results in the conferral of a single degree with both programs listed on the diploma. For either the dual or joint degree program, a defined number of credits is shared between the two program areas, so that the total number of credits is less than that for two individual degrees.

Dual and joint degree programs must be reviewed and approved through the University's curriculum review and approval processes. Additionally, graduate program partners of a dual or joint master's degree program must submit, and have approved by the Graduate School, a onetime Memorandum of Understanding (MOU) that details the administrative oversight, financial agreements (including distribution of differential tuition and special fees), advisory and graduate committee requirements, other agreements, and curriculum of the dual or joint program. Contact the Dean of the Graduate School for details about the review and approval processes for new dual or joint degree program, and for details of the MOU format.

Students in a dual or joint master's degree program must meet all admissions requirements and all the curricular requirements for the dual or joint program. See the Dual and Joint Master's Degree Programs section of Admissions Requirements and Procedures for details on applying to a dual or joint master's degree program. All other Graduate School and Graduate and Professional Bulletin policies are to be met, including time limits.

A graduate committee is required unless both degree program areas of a dual or joint master's program are Plan C master's programs. The graduate committee must include faculty members from both academic areas, as well as an outside committee member not associated with either degree program area. See the Advisory System section of Requirements for All Graduate Degree, Graduate Study for more details.

See the Collaborative Degree Program section of Inter-University Graduate Programs for information on collaborative degree programs that partner a CSU graduate program with a graduate program at an international university.

**Credit Requirements (Dual and Joint Master's Degrees)**

Graduate programs that are accredited through a professional organization must align their curriculum with curricular standards of the accrediting body when participating in a dual or joint master's degree program.

No more than 50% of credits from the degree with lower credit requirements may be double-counted for both degrees. For example, if one master's degree requires 30 credits and the other degree requires 42 credits, no more than 15 credits can be double-counted toward both degrees. In addition to regular courses, double-counted credits may include practicum, internship, research, and thesis credits. Double-counting of credits will be granted only for credits earned at Colorado State University and completed with a grade of “B” or higher or a grade of “S” if applicable.

If a dual-degree student is dismissed from the Graduate School due to academic standing or failure to make academic progress, the student may be readmitted, in accordance with Graduate School policy, to only one of the programs (see the Readmission section of Admissions Requirements and Procedures). The student will no longer be eligible to participate in the dual or joint master’s degree program.

**Final Examination (Dual and Joint Master’s Degrees)**

A joint master's degree may have a single thesis, exam, project, or portfolio component that integrates content from both degree program areas, as appropriate to the degree type (plan A, B, or C).

If one or both of the academic areas of a dual degree has a thesis, exam, project, or portfolio component, a final thesis defense, examination, or project/portfolio presentation must be held covering the combined thesis, exam, or project/portfolio component. One thesis, exam, project,
or portfolio is submitted to satisfy the requirements of both degrees of a dual degree program.

If a thesis, exam, project, or portfolio-based degree is combined with a coursework only degree in a dual degree program, the thesis, exam, project, or portfolio should integrate content from both degree program areas.

If a final examination is required for either a dual or joint degree program, the final examination may be oral or written, or both as determined by the examination committee. At least one week before the final examination, the advisor must inform the student and the committee members of the nature and scope of the examination.

**Doctoral Degree**

The doctoral degree is the highest academic degree offered by CSU. Those who earn it must demonstrate significant intellectual achievement, scholarly ability, and breadth of knowledge. The nature of the degree program will vary greatly depending on the type of doctoral degree and discipline involved. There are two types of doctoral degrees that may be earned, the doctor of philosophy (Ph.D.) and the professional doctorate (P.D.). There are several important distinctions between the Ph.D. and the P.D. The defining characteristics of each are as follows:

1. The Ph.D. and the P.D. degrees are distinguishable from each other based on the courses comprising the programs’ curricula, student learning outcomes, and measures of student success. The New Degree Program Proposal must address these components as part of the Provost’s and the University Curriculum Committee’s review process for such proposals.

2. For the Ph.D., the scholarly, scientific, and creative outcomes are expected to contribute to the knowledge base of the field. Extensive original research or creative activity relevant to the discipline is required. The preparation of a dissertation that presents the results of sustained research or investigation of an important intellectual problem is mandatory.

3. For the P.D., the experiential, scientific, and creative outcomes are expected to contribute to the highest level of professional skills and the application of such skills and knowledge in the profession and its practice. Applied research, clinical research, or extensive advanced experience relevant to the profession is required. The preparation of a dissertation that presents the results of an applied project relevant to the profession is mandatory for non-accredited programs; programs accredited through a national organization may require other capstone experiences or a dissertation.

**Credit Requirements (Ph.D., P.D.)**

A minimum of 72 semester credits beyond the baccalaureate degree is required for both the Ph.D and the P.D.

*For students who submit a master’s degree in partial fulfillment of these requirements:* A master’s degree from an accredited college or university may be accepted for a maximum of 30 credits. In addition, up to ten credits in courses earned after the date on which the master’s degree was awarded may be accepted in transfer if approved by the student’s advisory committee, the department, and the Graduate School (http://www.graduateschool.colostate.edu/). A minimum of 32 credits must be earned at CSU after admission to a doctoral program. At least 21 credits beyond the master’s degree must be earned in courses numbered 500 or above.

*For students enrolled in a continuous master’s/dotalor program at CSU:* All courses taken during the master’s program may be applied to the doctoral degree, even if the total master’s degree credits exceed 30. These courses must be specified on the doctoral program of study and approved by the student’s advisory committee, the doctoral department, and the Graduate School. Continuous programs are those in which the student is admitted to the doctoral program and formally registers for the Fall or Spring semester immediately following receipt of the master’s degree. All other prescribed credit requirements of the master’s and doctoral degrees remain in effect in such cases.

*For students who do not submit a master’s degree in partial fulfillment of these requirements:* Up to ten credits earned at an accredited college or university may be accepted for transfer if approved by the student’s advisory committee, the department, and the Graduate School. A minimum of 62 credits must be earned at CSU after admission to a doctoral program. At least 37 credits beyond the bachelor’s degree must be earned in courses numbered 500 or above.

A professional, post baccalaureate degree in Medicine, Veterinary Medicine, Dentistry, Pharmacy, Law, or Divinity may be accepted for a maximum of 30 credits. The institution granting such a degree must be certified by one of the major regional accrediting agencies. Students contemplating this option may be required to pass an equivalency examination to assure they possess levels of knowledge and skill generally expected of master’s degree holders.

**P.D. Requirements**

Requirements for a P.D. may vary based on the presence or absence of an accreditation process. P.D. programs that are accredited through a national organization will identify curricular content, process, and outcome requirements for the degree to meet the accreditation standards. These curricular requirements may take precedence over Graduate School requirements; however, the minimum number of credits and their level are Graduate School requirements regardless of accreditation standards. P.D. programs that are not accredited must conform to Graduate School requirements.

Departments or Special Academic Units with a P.D. program must form an active advisory board composed of CSU faculty and individuals from outside of CSU who are leaders in the discipline from applied settings. Advisory board members serve to provide advice on the program curriculum, assist with student projects and placements, and interact individually with students.

The Graduate School requires the following P.D. program components:

1. Programs that do not require relevant work experience for admission must include a significant experiential component within the curriculum.

2. Curricula must include a minimum of 18 credits of course work at the 500 level or above that reflect professionalism and applied or translational knowledge and fulfill the learning objectives of the programs. The 18 credits of coursework must meet the following criteria:
   a. A minimum of 6 credits is included within each of the two categories (professionalism, applied or translational knowledge),
   b. at least 9 credits must be regular coursework, and
c. up to 9 credits may be non-regular coursework. (Scholastic Standards [http://catalog.colostate.edu/general-catalog/graduate-bulletin/graduate-study/procedures-requirements-all-degrees/#scholastic-standards]).

3. The preparation of a dissertation is required for non-accredited programs. The dissertation is a formal, written document which presents the results of an applied or clinical research project on an issue relevant to the profession and practice. The dissertation must represent an independent intellectual achievement and must make a meaningful contribution to the creation, use, and improvement of knowledge in the context of a profession and practice. Students typically earn a number of research credits while completing the work which underlies the dissertation.

4. At least one graduate committee member must have or have had a substantial and relevant employment record in an applied setting and meet the Graduate School requirements for membership (Graduate Advisor and Committee Makeup [http://graduateschool.colostate.edu/policies-and-procedures/advisor-committee/]). The committee chair must submit a request for approval of the individual that includes proof of the Advisory Committee's endorsement of the individual and a description of the individual’s substantial and relevant employment record in an applied setting to the dean of the Graduate School.

**Ph.D. Requirements**

The preparation of a dissertation is required. The dissertation is a formal, written document which presents the results of sustained research or investigation on an important intellectual problem. The dissertation must represent independent, intellectual achievement and must make a meaningful contribution to the knowledge, accumulated wisdom, or culture of the field in which it is written. Students typically earn a number of research credits while completing the work which underlies the dissertation.

When programs within the same department have both a Ph.D. and a non-accredited P.D., Ph.D. students in the department offering the P.D. may enroll in one or more of the 18 P.D. credits that meet the professionalism and applied/translational knowledge requirement. However, these credits may NOT count toward the 72 credits beyond the baccalaureate required for the Ph.D.; they will be in addition to that number. Credits earned in P.D. specific courses cannot be part of the program of study for any Ph.D. student.

**Doctoral Residency Requirement (Ph.D., P.D.)**
